| | | |
|-------|---|----|
| 1 | Introduction <i>Peter A. Williams</i> | 1 |
| 1.1 | Rheological behaviour | 1 |
| 1.2 | Polymer adsorption and colloid stability | 2 |
| 1.3 | Surface modification | 6 |
| 1.4 | Complexation and controlled release | 7 |
| 1.5 | Packaging | 8 |
| | References | 8 |
| 2 | Natural Thickeners <i>Graham Sworn</i> | 10 |
| 2.1 | Introduction | 10 |
| 2.1.1 | Marine polysaccharides | 10 |
| 2.1.2 | Botanical polysaccharides | 13 |
| 2.1.3 | Microbial polysaccharides | 14 |
| 2.1.4 | Chemically modified polysaccharides | 14 |
| 2.2 | Introduction to rheology | 15 |
| 2.2.1 | Measurement of viscosity | 16 |
| 2.2.2 | Measurement of viscoelasticity | 17 |
| 2.3 | Rheology of natural thickeners | 18 |
| 2.3.1 | Viscosity of entanglement network solutions | 19 |
| 2.3.2 | Viscoelasticity of entanglement network solutions | 22 |
| 2.3.3 | Weak and strong gels | 23 |
| 2.4 | Dispersion and hydration | 25 |
| 2.5 | Food applications of natural thickeners | 26 |
| 2.5.1 | Dressings and sauces | 26 |
| 2.5.2 | Beverages | 26 |
| 2.5.3 | Baking | 27 |
| 2.5.4 | Ice cream | 27 |
| 2.6 | Non-food applications | 27 |
| 2.6.1 | Oil drilling fluids | 28 |
| 2.6.2 | Acidic, basic and chlorinated cleaning products | 28 |
| 2.6.3 | Personal care and cosmetics | 29 |

| | | |
|-------|---|----|
| 2.6.4 | Textile printing | 29 |
| 2.6.5 | Paper coating | 30 |
| 2.6.6 | Building materials | 30 |
| 2.7 | Conclusions | 30 |
| | References | 30 |
| 3 | Acrylic Polymers as Rheology Modifiers for Water-Based Systems <i>Malcolm Hawe</i> | 32 |
| 3.1 | Introduction | 32 |
| 3.2 | Chemistry of acrylic polymer thickeners | 33 |
| 3.2.1 | Addition polymers | 33 |
| 3.3 | Polymer synthesis techniques | 38 |
| 3.3.1 | Polymer physical forms | 39 |
| 3.3.2 | Liquid grades | 40 |
| 3.4 | Polymer characterisation | 44 |
| 3.4.1 | Polymer characterisation techniques | 44 |
| 3.4.2 | Rotational viscometers | 49 |
| 3.5 | Basic concepts of rheological behaviour | 51 |
| 3.5.1 | Advances in rheological characterisation | 53 |
| 3.5.2 | Extensional viscosity | 60 |
| 3.6 | End-use applications for synthetic thickeners | 62 |
| 3.6.1 | Oilfield flooding applications | 62 |
| 3.6.2 | Drag reduction | 63 |
| 3.6.3 | Textile printing applications | 64 |
| 3.6.4 | Emulsion paints and water-based coatings | 66 |
| 3.6.5 | Cosmetic, toiletry and household formulations | 67 |
| 3.6.6 | Agricultural spray systems | 68 |
| 3.7 | Conclusion | 69 |
| | Acknowledgements | 69 |
| | Appendix | 70 |
| | References | 70 |
| 4 | Gelling Agents <i>Peter A. Williams</i> | 73 |
| 4.1 | Introduction | 73 |
| 4.2 | Gelation triggered by temperature | 76 |
| 4.2.1 | Gels formed on cooling | 76 |
| 4.2.2 | Gel formation on heating | 84 |
| 4.3 | Ion-mediated gelation | 85 |
| 4.3.1 | Cation-mediated gelation | 85 |
| 4.3.2 | Anion-mediated gelation | 89 |
| 4.4 | Retrogradation | 91 |
| 4.4.1 | Starch | 91 |
| 4.4.2 | Konjac mannan | 94 |
| 4.5 | Summary | 95 |
| | References | 95 |

| | | |
|-------|--|-----|
| 5 | Emulsification and Encapsulation <i>D. Julian McClements</i> | 98 |
| 5.1 | Introduction | 98 |
| 5.2 | Emulsions | 98 |
| 5.2.1 | Introduction | 98 |
| 5.2.2 | Droplet characteristics | 100 |
| 5.2.3 | Formation of emulsions | 104 |
| 5.2.4 | Encapsulation of emulsified lipids | 105 |
| 5.2.5 | Emulsion stability | 107 |
| 5.2.6 | Bulk physicochemical properties of emulsions | 111 |
| 5.3 | Water soluble polymer emulsifiers | 114 |
| 5.3.1 | Introduction | 114 |
| 5.3.2 | Molecular characteristics | 114 |
| 5.3.3 | Interfacial activity and emulsion stabilization | 115 |
| 5.4 | Selection of an appropriate polymeric emulsifier | 119 |
| 5.5 | Common water soluble polymers used as emulsifiers in foods | 121 |
| 5.5.1 | Proteins | 121 |
| 5.5.2 | Polysaccharides | 125 |
| 5.5.3 | Protein–polysaccharide complexes | 127 |
| 5.6 | Conclusions | 128 |
| | References | 128 |
| 6 | Polymeric Flocculants <i>Gillian M. Moody</i> | 134 |
| 6.1 | Introduction | 134 |
| 6.2 | Basic theory of suspensions and flocculation | 134 |
| 6.2.1 | The mechanism of bridging flocculation | 135 |
| 6.2.2 | The charge patch mechanism | 137 |
| 6.3 | Material types | 138 |
| 6.3.1 | Natural products | 138 |
| 6.3.2 | Synthetic polymers | 139 |
| 6.4 | Synthesis of synthetic water soluble polymers | 140 |
| 6.5 | Characterisation of industrial water soluble polymers | 145 |
| 6.5.1 | Ionic character | 145 |
| 6.5.2 | Viscosity | 146 |
| 6.5.3 | Molar mass | 146 |
| 6.6 | Solid/liquid separation | 148 |
| 6.6.1 | Clarifiers | 150 |
| 6.6.2 | Thickeners | 150 |
| 6.6.3 | Centrifuges | 151 |
| 6.6.4 | Filters | 151 |
| 6.6.5 | Flocculant selection | 153 |
| 6.6.6 | Coagulant use | 153 |
| 6.6.7 | Operating strategies | 153 |
| 6.7 | Mineral processing | 154 |
| 6.8 | Oil industry applications | 156 |
| 6.8.1 | Water injection systems | 156 |
| 6.8.2 | Oily water clarification | 156 |

| | | |
|--------|---|---------|
| 6.9 | Municipal wastewaters and sludges | 157 |
| 6.10 | Industrial effluents | 161 |
| 6.11 | Potable water treatment | 163 |
| 6.12 | Paper making applications | 163 |
| 6.12.1 | Retention, drainage and formation | 163 |
| 6.12.2 | Flocculation mechanisms in paper making | 164 |
| 6.12.3 | Development of retention, drainage and formation programs | 165 |
| 6.13 | The use of high molecular weight flocculants in agriculture | 168 |
| 6.14 | Conclusions | 169 |
| | Acknowledgments | 170 |
| | References | 170 |
| 7 | Polymer Micelles: Amphiphilic Block and Graft Copolymers as Polymeric Surfactants <i>Gérard Riess</i> | 174 |
| | Nomenclature | 174 |
| 7.1 | Introduction | 176 |
| 7.2 | Structures and synthesis of block and graft copolymers | 177 |
| 7.2.1 | Block copolymers with linear A-B and A-B-A architecture | 178 |
| 7.2.2 | Block copolymers with complex molecular architecture | 183 |
| 7.2.3 | Graft copolymers | 184 |
| 7.3 | Block and graft copolymer micelles in aqueous medium | 189 |
| 7.3.1 | Generalities | 189 |
| 7.3.2 | Preparation techniques | 191 |
| 7.3.3 | Characterization of copolymer micelles: experimental techniques | 191 |
| 7.3.4 | Dynamics of micellar systems | 194 |
| 7.3.5 | Solubilization in micelles | 195 |
| 7.3.6 | Thermodynamic aspects, theories and computer simulations | 196 |
| 7.3.7 | Micellization of non-ionic amphiphilic block copolymers | 197 |
| 7.3.8 | Micellization of anionic amphiphilic copolymers | 201 |
| 7.3.9 | Micellization of cationic amphiphilic copolymers | 202 |
| 7.3.10 | Micellization of double-hydrophilic copolymers | 204 |
| 7.3.11 | Cross-linked micellar structures | 207 |
| 7.3.12 | Micellization of copolymers with complex molecular architecture | 208 |
| 7.3.13 | Comicellization and complex formation | 212 |
| 7.4 | Application possibilities of biocompatible copolymer micellar systems | 215 |
| 7.4.1 | Solubilization of bioactive components in micellar systems: controlled drug release | 215 |
| 7.4.2 | Miscellaneous biomedical applications | 219 |
| 7.5 | Conclusions | 220 |
| | Acknowledgments | 221 |
| | References | 221 |
