SECTION I GENERAL PRINCIPLES OF ORAL MICROBIOLOGY

I General Microbiology 3

ROBERT A. BURNE.

Introduction 3

Classification Schemes for Bacteria 4

Bacterial Classification 5

Bacterial Architecture 7

Membranes 7

Lipopolysaccharides 9

Cell Wall Peptidoglycan 10

Lipoteichoic Acids 10

Other Important Components Produced by Bacteria 12

Genetic Organization of Bacteria 15

The Bacterial Chromosome 15

Chromosome Replication in Bacteria 15

Gene Transfer in Bacteria 16

Bacterial Growth and Nutrition 17

Growth 17

Nutrient Acquisition 19

Introduct	ion to	Fundamental	Concepts of	Oral	Microbial
Ecology	20				

Microbial Biofilms 20

Ecology of the Oral Microbiota and Development of Oral Diseases 22

KEY POINTS 22

2 The Immune System and Host Defense 23

PETER M. LYDYARD AND MICHAEL F. COLE

Introduction 23

Innate Immunity 23

Cells Involved in Early Defense 23

Molecules Involved in Early Defense 24

The Lymphoid System 28

Lymphocyte Heterogeneity 29

Lymphoid Organs and Tissues 29

Antibodies: Specificities, Classes, and Functions 31

Generalized Structure and Specificity 31

Antibody Classes 34

Differential Properties of Antibodies 34

Antibody-Mediated Protection against Microbes 35

Recognition of Antigen by Lymphocytes 37

B Lymphocytes 37

T Lymphocytes 38

The Adaptive Immune System in Action 39

Initiation of Adaptive Immune Responses: the Interface between the Innate and Adaptive Systems 39

Most B Cells Require Help from T Cells 42

T-Cell Mechanisms in Host Defense: Cell-Mediated Immunity 43

KEY POINTS 44

CORE READING 45

FURTHER READING 45

3 The Oral Environment 47

FRANK A. SCANNAPIECO

Introduction 47

General Features of the Oral Environment 47

Teeth 47

The Oral Soft Tissues (Periodontium, Oral Mucosa, and Tongue) 50

Physical and Host Parameters Affecting Oral Microbial Colonization 51

Temperature 51

	F 1
pН	51

Oxygen 52

Mechanical Abrasive Forces 52

Fluid Flow 53

Host Age 53

The Oral Microbiota 53

Tooth (Dental) Plaque: Early Determinants of Plaque Formation 53

Calculus 58

The Mucosal Microbiota 61

Recent Concepts of Dental Biofilm Formation 61

Oral Fluids: Saliva and Saliva-Bacterium Interactions 63

Clearance of Bacteria from the Oral Cavity: Agglutinins 66

Pellicle Adhesion Receptors 68

Antimicrobial Components in Saliva 69

Saliva as a Source of Bacterial Nutrition 70

Gingival Crevicular Fluid 71

KEY POINTS 71

FURTHER READING 72

4 Isolation, Classification, and Identification of Oral Microorganisms 73

EUGENE J. LEYS, ANN L. GRIFFEN, PURNIMA S. KUMAR, AND MARK F. MAIDEN

Introduction 73

Diversity of the Oral Microbiota 73

The Ribosomal 16S Gene and Bacterial Identification and Classification 74

16S and Phylogeny 74

Sampling Oral Bacteria 75

Identifying Oral Bacteria 76

Molecular Techniques for Bacterial Identification 76

Naming of Bacteria and Molecular Analysis 83

Direct Observation of Oral Bacteria 83

Cultivation of Oral Bacteria 84

Oxygen Requirements 84

Culture Media 86

Classification of Cultured Bacteria 87

Antibiotic Susceptibility 87

KEY POINTS 88

FURTHER READING 88

5 Oral Microbial Ecology 89

HOWARD F. JENKINSON AND RICHARD J. LAMONT

Introduction 89

Acquisition of Oral Bacteria 90

Colonization by Oral Bacteria 91

Surface Structures and Molecules Involved in Adhesion 91

Mechanisms of Adhesion 94

Host Surface-Specific Constraints on Bacterial Adhesion 96

Adhesion and Metabolism 96

Gene Regulation 98

Bacterial Communication 99

Communication with Host Cells | 101

KEY POINTS 104

FURTHER READING 105

6 Oral Microbial Physiology 107

ROBERT E. MARQUIS

Overview 107

Acid-Base Physiology of Oral Microorganisms 108

Acid-Base Cycling in the Mouth 108

The Range of Acid Tolerance among Oral Bacteria Related to Oral Ecology 109

Acid Tolerance Related to Specific Functions III

Constitutive and Adaptive Acid Tolerance 112

Alkali Production and Tolerance 114

Acid-Base Physiology, Virulence, and Disease 115

Oxygen Metabolism, Oxidative Stress, and Adaptation 115

Sources of Oxygen for Oral Bacteria 115

Oxygen Levels and Oxidation-Reduction Potentials in Dental Plaque 116

Oxygen Metabolism in Oral Bacteria, Reactive Oxygen Species, and Oxidative Damage 117

Repair Systems 120

Physiology of Oral Biofilms 121

Physicochemical Gradients in Oral Biofilms and Concentrative Capacities of Biofilms for Fluoride and Other Antimicrobials 121

Plaque Nutrition Related to Biofilm Physiology 123

KEY POINTS 124

FURTHER READING 124

7 Genetics and Molecular Biology of Oral Microorganisms 125

Susan Kinder Haake and Donald J. LeBlanc

Introduction 125

Genomes and Genetic Transfer in Nature 126

Gene Transfer in Nature 130

Molecular Analysis of Oral Microorganisms 138

Vectors and Their Utility 141

Features of Plasmids Essential for Vector Construction 146

Use of Native Plasmids in Molecular Analyses 151

Use of Nonnative or Broad-Host-Range Plasmids in Molecular Analyses 157

Integration Vectors 159

Transposon Mutagenesis 163

KEY POINTS 166

8 Applied Molecular Biology and the Oral Microbes 169

Hansel M. Fletcher, Ann Progulske-Fox, and Jeffrey D. Hillman

Introduction 169

Investigating Gene Expression: Genetic Approaches 169

DNA Cloning 169

PCR 172

Investigating Gene Function 175

Understanding Gene Regulation 178

IVIAT: a Method To Identify Microbial Genes Expressed Specifically during

Human Infections 180

Genomics: Approaches and Challenges 182

Transcriptomics and Proteomics 183

Transcriptomics 183

Proteomics 185

KEY POINTS 186

FURTHER READING 186

9 Population Genetics of Oral Bacteria 187

MOGENS KILIAN

Introduction 187

Bacterial Species Show Different Patterns of Evolution 187

Localized Sex in Bacteria 189

Differences in Pathogenicity of Strains 190

Specific Host Adaptation of Bacterial Clones 190

Population Sizes of Pathogenic and Commensal Bacteria 191

Oral Bacteria Show Varying Degrees of Genetic Diversity 192

The Oral Microbiota Is a Dynamic Population Undergoing Constant Changes 193

Virulence Differences within Species of Oral Bacteria? 194

Methods of Strain Differentiation and Search for Virulent Clones 195

Population Genetic Structure of Oral Bacteria 197

KEY POINTS 199

FURTHER READING 200

10 Oral Microbiology and the Immune Response 201

MICHAEL F. COLE AND PETER M. LYDYARD

General Principles 201

Introduction 203

Innate Host Defense 204

Oral Surfaces 204

Fluid Phase: Saliva 208

Acquired Specific Immunity in the Mouth 214

KEY POINTS 229

FURTHER READING 229

SECTION II ORAL DISEASES OF MICROBIAL ETIOLOGY 231

11 Caries 233

ROBERT G. QUIVEY, JR.

Overview 233

Caries in Populations 235

Bacterial Etiology of Dental Caries 237

Where Do Caries Occur? 237

Supragingival Tooth Structures 237

Root Surface Caries 238

Animal Models in Caries Research 239

The Rat Caries Model 240

Infection of Rodents for	Caries Studies	240
Caries Scoring in Rats	241	

Caries Models in the Future 241

Immunology of Dental Caries and the Possibility of a Caries Vaccine 242

Secretory IgA Is the Dominant Antibody in Saliva 243

Vaccine Candidate Antigens and Delivery Systems 244

Cross-Reacting Antibodies to Streptococcal Antigens 245

Application of Molecular Techniques to the Study of Dental Caries 247

Molecular Approaches to Adherence and Colonization by S. mutans 247

Characterization of Stress Responses and Their Role in Pathogenesis 250

The Genomic and Postgenomic Eras of Caries Research in Oral Bacteria 251

KEY POINTS 252

FURTHER READING 252

12 Periodontal Diseases 253

SUSAN KINDER HAAKE, DIANE HUTCHINS MEYER, PAULA M. FIVES-TAYLOR, AND HARVEY SCHENKEIN

General Concepts 253

Definitions 253

The Role of Plaque Bacteria in Periodontal Disease: Nonspecific, Specific, and Ecological Plaque Hypotheses 255

Suspected Pathogens in Periodontal Diseases 258

Virulence Traits of Suspected Periodontal Pathogens 261

P. gingivalis 262

A. actinomycetemcomitans 268

T. denticola 273

E. corrodens 275

E. nucleatum 277

P. intermedia 277

Capnocytophaga spp. 279

Immunopathogenic Mechanisms of Tissue Destruction in Periodontitis 279

Pathogenesis of Gingivitis 280

Pathogenesis of Periodontitis 281

Bacterial Virulence and Evasion of the Immune System 282

Destruction of Periodontal Tissues by Immunopathologic Means 283

A Model for Periodontal Pathogenesis 283

Immune Cells and Bone Resorption 285

Use of Animal Models To Study Pathogenesis of Periodontitis 286

KEY POINTS 292

FURTHER READING 294

13 Oral Virology 295

MATTI SÄLLBERG

Introduction 295

What Is Oral Virology? 295

What Is a Virus? 295

The Viral Life Cycle 297

Virus Taxonomy 304

Oral Virology: the Viruses 308

Viruses That Can Cause Pathologies in the Oral Cavity 308

Picornaviridae 308

Human Herpesviruses 309

Human Papillomaviruses 313

Viruses Present in the Oral Cavity 314

Hepatitis BVirus 314

Hepatitis D Virus 317

Hepatitis C Virus 317

Human Immunodeficiency Virus 319

Immune Responses to Viruses 322

Viruses and the Innate Immune System 322

Viruses and the Adaptive Immune System 323

Antiviral Vaccines and Therapies 326

The History of Viral Vaccines 326

Antiviral Immunoglobulin Preparations and Vaccines 327

Antiviral Compounds and Therapies 329

KEY POINTS 331

FURTHER READING 332

14 Fungi and Fungal Infections of the Oral Cavity 333

RICHARD D. CANNON AND NORMAN A. FIRTH

Introduction 333

Biology 333

Morphology 334

Replication 335

Pathogenesis 335

Acquisition 335

Virulence 336

Host Defenses against Fungal Infection 337

Nonspecific Defense Mechanisms 337

Specific Defense Mechanisms 338

Antifungal Therapy 338

Growth and Identification of Fungi 338

Principles of Antifungal Chemotherapy 339

Clinical Conditions 340

Candidiasis 341

Aspergillosis 345

Cryptococcosis 346

Histoplasmosis 346

Blastomycosis 346

Paracoccidioidomycosis 347

Mucormycosis 347

KEY POINTS 348

FURTHER READING 348

15 Endodontic Microbiology 349

BURTON ROSAN AND LOUIS ROSSMAN

Introduction 349

History 349

Sources of Infection 351

Bacteriology of Root Canal Infections 353

To Culture or Not To Culture 356

One-Visit Endodontics 357

Microbiological Considerations for Obturation 357

Antibacterial Agents Used in Endodontics 358

Focal Infection Today 359

Summary 359

KEY POINTS 360

16 Systemic Disease and the Oral Microbiota 361

Susan Camp, Yu Lei, Massimo Costalonga, Yongshu Zhang, Alexandre Zaia, Reka Vajna, Karen F. Ross, and Mark C. Herzberg

Introduction 361

Routes from Oral to Systemic Compartments 361

Breaches in the Oral Mucosa 361

Transport and Translocation of Microbes 362

The Potential of Commensals To Behave as Pathogens 362

Microbial Chameleons: Changing Gene Expression in Response to Environmental Signals 363

Host Defenses 366

Systemic Diseases Associated with Oral Microbes 368

Infective Endocarditis 368

Disseminated Intravascular Coagulation 370

Other Possible Associations between Oral Microbes and Systemic Disease 370

Heat Shock Proteins 370

Autorecognition Induced by Oral Microorganisms 37!

Inflammation—a Link between Local Dental Disease and Systemic Pathology? 372

KEY POINTS 375

FURTHER READING 375

SECTION III CONTROL OF ORAL INFECTIONS 377

17 Antibiotics and the Treatment of Infectious Diseases 379

Donald J. LeBlanc, Thomas R. Flynn, Constantine Simos, and Marilyn S. Lantz

Antibiotics: a Class of Therapeutic Agent 379

Inhibitors of Cell Wall Synthesis 380

Inhibitors of Translation 385

Inhibitors of Transcription and Replication 388

Miscellaneous Antibiotics 390

Treatment of Tuberculosis 391

Antibiotic Combinations 391

Measurements of Antibiotic Potency 392

Use of Antibiotics in the Practice of Dentistry 393

Use of Antibiotics in the Treatment of Odontogenic Infections 394

Selection of Antibiotics for the Treatment of Odontogenic Infections 396

Use of Antibiotics in the Treatment of Periodontitis 400

Use of Antibiotics for the Prevention of Infection

(Antibiotic Prophylaxis) 402

Additional Considerations for the Use of Antibiotics in Dental Practice: Drug Interactions 402

Antibiotic Resistance 405

Resistance to Antibiotics Follows Their Introduction into Clinical Practice 405

R Factors and Other Antibiotic Resistance Plasmids 405

Acquired Antibiotic Resistance 407

Transposons and Other Mobile Genetic Elements Carry Antibiotic Resistance Genes 408

The Role of Mutations in Antibiotic Resistance 412

Efflux Pumps: Association with Acquired and Intrinsic Resistance and Mutation to Resistance 414

Oral Microbial Resistance 416

Antibiotic Resistance in the 21st Century 418

Genetic Elements in Resistance Spread 418

The Many Mechanisms of Antibiotic Resistance 419

KEY POINTS 421

FURTHER READING 422

18 Infection Control in Dentistry 423

J. CHRISTOPHER FENNO, WILSON A. COULTER, AND DENNIS E. LOPATIN

Introduction 423

Introduction to Risk Control 425

Quality Assurance Is the Promise of Performance 425

Cross-Infection Control Is Essentially a Set of Management Strategies for Risk Control 425

What Is Risk Management? 425

Cross-Infection Risks in Dentistry 426

Routes of Spread of Infection 427

Management of Recently Identified Infection Control Risks 430

Practical Application of Infection Control Measures in General Dentistry 435

Definitions of Terms 435

Problems Posed for Prevention of Cross-Infection in General Dental

Practice 435

Universal Precautions 437

Infection Control Checklist 440

Sterilization of Instruments 441

KEY POINTS 446

FURTHER READING 446

Index 447
