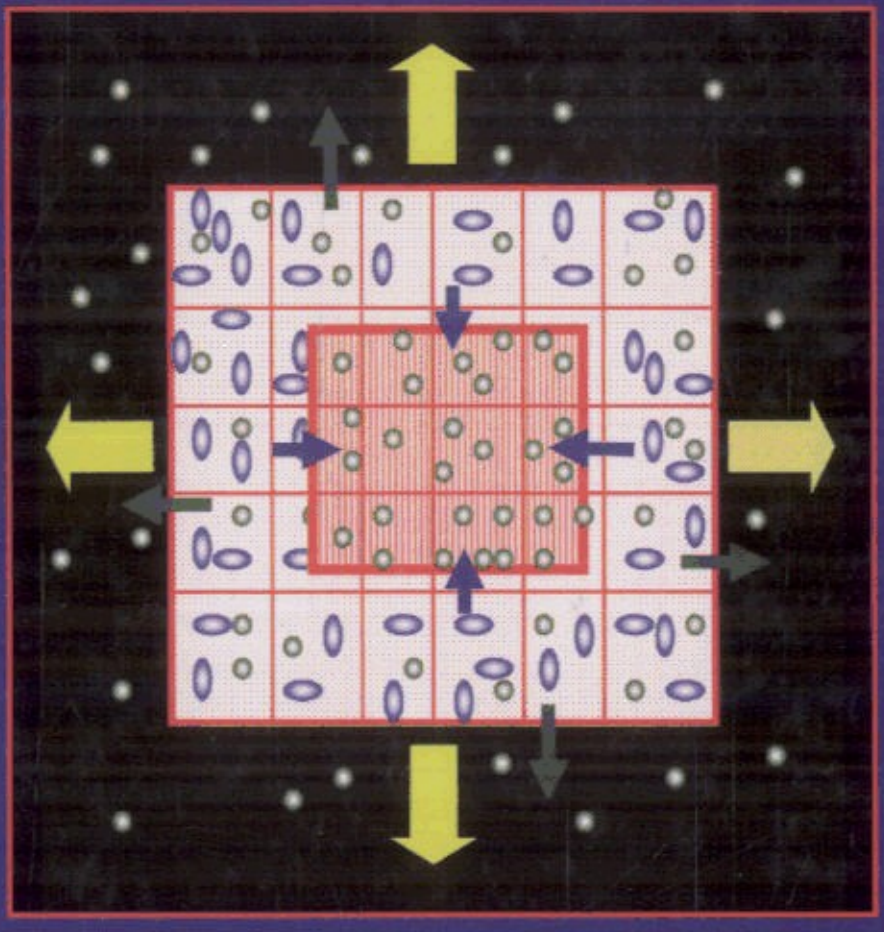
Understanding Drug Release and Absorption Mechanisms

A PHYSICAL and MATHEMATICAL APPROACH



Mario Grassi • Gabriele Grassi
Romano Lapasin • Italo Colombo

CRC Press
Taylor & Francis Group

Table of Contents

Chapter 1
Mathematical Modeling 1
1.1 Introduction 1
1.2 Model Building 3
1.2.1 Model Building: An Example 8
1.3 Model Fitting 11
1.3.1 Chi-Square Fitting: Straight Line 19
1.3.2 Chi-Square Fitting: General Case 21
1.3.3 Robust Fitting 22
1.4 Models Comparison 25
1.5 Conclusions 26
References 26

Chapter 2
Part 1 Gastrointestinal Tract 29
2.1 Macro- and Microscopic Anatomy of the Gastrointestinal Tract 29
2.1.1 The Stomach 29
2.1.2 The Small Intestine 30
2.1.3 The Colon 32
2.1.4 Absorptive Cells 32
2.1.5 Tight Junctions 33
2.1.6 Cellular Membrane 34
2.2 Intestinal Absorption 35
2.2.1 Positive and Negative Forces 35
2.2.2 Drug Absorption Pathways 36
2.2.3 Absorption in GI Diseases 38
2.2.4 Models of Intestinal Absorption 40
2.3 Human and Animal GI Tract: A Comparison 42
2.3.1 Anatomy 42
2.3.1.1 The Stomach 42
2.3.1.2 The Small Intestine 43
2.3.1.3 The Colon 43
2.3.2 Physiology 45
2.3.2.1 pH and Bile Fluid 45
2.3.2.2 Microflora and Mucin 49

2.3.2.3 Other Physiological Aspects 50
2.3.3 GI Tract Biochemistry 51
Part 2 Skin 53
2.4 Anatomy 53
2.4.1 Epidermis 53
2.4.1.1 Stratum Corneum Structure 56
2.4.2 Dermis 56
2.4.3 Hypodermis 58
2.5 Skin Delivery Strategies 58
2.5.1 Electrically Based Enhancement 59
2.5.2 Vesicular Carriers 62
2.5.3 Chemical Enhancement 63
2.5.4 Microinvasive Delivery 64
2.5.5 Velocity-Based Technique 64
2.6 Animal Model of Skin Delivery 65
2.6.1 Pig 65
2.6.2 Mouse 66
References 68

Chapter 3

Rheology 89
3.1 Introduction 89
3.2 Viscosity and Newtonian Fluids 91
3.3 Shear-Dependent Viscosity and Non-Newtonian Fluids 95
3.4 Shear Flows 99
3.5 Not Only Viscosity: Normal Stress Differences and Other Material Functions 102
3.5.1 Tensional State 102
3.5.2 Deformation State 105
3.5.3 Normal Stress Differences 107
3.6 Extensional Flows and Complex Flows 108
3.7 Time-Dependence: Thixotropy and Viscoelasticity 112
3.8 Linear Viscoelasticity 116
3.8.1 Oscillatory Shear Test and Linear Viscoelastic Quantities ... 116
3.8.2 Linear Viscoelastic Models 118
3.9 Rheological Properties and Structural Features 123
3.9.1 Simple Fluids and Homogeneous Mixtures 124
3.9.1.1 Salt Solutions 125
3.9.2 Surfactant Solutions (From Dilute to Micellar and Crystalline Systems) 126
3.9.3 Polymeric Systems 129

3.9.3.1 Flexible Chains and Ordinary Polymer Solutions ... 129
3.9.3.2 Rigid Chains and Crystalline Polymer Solutions ... 135
3.9.3.3 Time Temperature Superposition Principle ... 139
3.9.3.4 Associative Polymer Solutions and Gels ... 140
3.9.3.5 Weak and Strong Physical Gels ... 143
3.9.4 Disperse Systems ... 145
3.9.4.1 Colloidal Interactions and Dispersion State ... 146
3.9.4.2 Suspensions of Noninteracting Particles (Hard Sphere Model) ... 149
3.9.4.3 Effects of Particle Size Distribution and Shape ... 152
3.9.4.4 Suspensions of Stabilized Particles ... 154
3.9.4.5 Suspensions of Attractive Particles ... 155
3.9.4.6 Emulsions ... 159
3.9.4.7 Microemulsions ... 163
3.9.4.8 Dispersions in Polymeric Matrices ... 163
3.10 Conclusive Considerations on Rheology Applications to Drug Delivery Systems ... 164
References ... 168

Chapter 4
Mass Transport ... 177
4.1 Introduction ... 177
4.2 Thermodynamic Concepts ... 179
4.2.1 Thermodynamic Equilibrium ... 180
4.2.2 Gibbs–Duhem Equation ... 183
4.2.3 Thermodynamic Potentials ... 184
4.3 Kinetics ... 185
4.3.1 Mass Conservation Law ... 187
4.3.2 Momentum Conservation Law ... 192
4.3.3 Energy Conservation Law ... 198
4.3.4 Final Considerations ... 201
4.4 Fick's Equation ... 202
4.4.1 Diffusion Coefficient ... 202
4.4.1.1 Diffusion in Solid or Solid-Like Medium ... 204
4.4.2 Fickian Kinetics ... 215
4.5 Effect of Initial and Boundary Conditions ... 218
4.5.1 Finite Release Environment Volume and Partition Coefficient ... 219
4.5.2 Initial Drug Distribution ... 221
4.5.3 Stagnant Layer ... 230
4.5.4 Holed Surfaces ... 231
4.5.4.1 Buchtel Model ... 236

4.6 Conclusions 244
References 246

Chapter 5
Drug Dissolution and Partitioning 249
5.1 Introduction 249
5.2 Dissolution 251
5.2.1 Surface Properties 253
5.2.1.1 Young's Equation 255
5.2.1.2 Surface Tension Determination 259
5.2.1.3 Wettability Effect on Drug Dissolution 265
5.2.2 Hydrodynamics 271
5.2.2.1 Rotating Disk Apparatus 272
5.2.2.2 Fixed Disk Apparatus 280
5.2.2.3 USP Apparatus 282
5.2.2.4 Channel Flow Method 285
5.2.3 Drug Solubility and Stability 288
5.2.3.1 Dissolution and Phase Changes 289
5.2.3.2 Dissolution of Polyphase Mixtures 291
5.2.3.3 Dissolution of Polyphase Mixtures: A Particular Case 297
5.2.3.4 Dissolution and Drug Degradation 301
5.2.4 Dissolution of Particulate Systems 302
5.3 Partitioning 306
5.3.1 Three Phases Partitioning 313
5.3.2 Partitioning and Permeation 318
5.3.3 Log(*P*) Calculation 320
5.4 Dissolution and Partitioning 321
5.5 Conclusions 324
References 327

Chapter 6
Dissolution of Crystallites: Effects of Size on Solubility 333
6.1 Introduction 333
6.2 Thermodynamic Concepts 334
6.2.1 Ideal Solutions 335
6.2.2 Melting Temperature Dependence on Crystal Dimension 340
6.2.3 Solubility Dependence on Crystal Dimension 350
6.2.3.1 Liquid–Vapor System 350
6.2.3.2 Solid–Liquid System 352
6.3 Experimental Methods and Limitations 354
6.4 Conclusions 365
References 366

Chapter 7

Drug Release from Matrix Systems 371
7.1 Introduction 371
7.2 Matrices 372
7.2.1 Matrix Topology 373
7.2.2 Release Mechanisms 381
7.3 Mathematical Modeling 387
7.3.1 Diffusion-Controlled Systems 394
7.3.2 Diffusion and Matrix/Drug Interactions Controlled Systems 401
7.3.3 Diffusion and Chemical Reaction Controlled Systems 411
7.3.4 Diffusion- and Dissolution-Controlled Systems 414
7.3.5 Diffusion-, Dissolution-, and Swelling-Controlled Systems 429
7.3.5.1 Matrix Swelling Equilibrium 429
7.3.5.2 Matrix Swelling Kinetics 439
7.3.5.3 Drug Dissolution and Diffusion 449
7.3.6 Erosion-Controlled Systems 452
7.3.7 Polydisperse Systems 460
7.3.8 Diffusion in Fractal Matrices 474
7.4 Conclusions 478
References 479

Chapter 8

Drug Release from Microemulsions 493
8.1 Introduction 493
8.2 Microemulsions: Structure 495
8.3 Microemulsions: Thermodynamics 498
8.3.1 Discrete Microemulsions' Droplet Size Distribution 499
8.3.2 Liquid–Liquid Interfacial Composition 500
8.4 Microemulsions: Experimental Characterization 509
8.4.1 Scattering Techniques 509
8.4.2 Nuclear Magnetic Resonance Techniques 510
8.4.3 Electronic Microscopy 510
8.4.4 Conductivity and Dielectric Spectroscopy 511
8.4.5 Rheology 511
8.5 Microemulsions and Drug Release 512
8.5.1 Microemulsion Administration Routes 513
8.5.2 Modeling of Drug Release from Microemulsions 515
8.5.2.1 Simple Case 519
8.5.2.2 More Complex Situation 525
8.6 Conclusions 534
References 535

Chapter 9

Drug Permeation through Membranes 539
9.1 Introduction 539
9.2 Synthetic Membranes 540
9.2.1 Synthetic Membranes Permeability Determination 541
9.2.2 Microencapsulated Systems 550
9.2.2.1 Physical Frame 551
9.2.2.2 Modeling 553
9.3 Biological Membranes 565
9.3.1 Intestinal Mucosa 565
9.3.1.1 *In Silico* Methods 565
9.3.1.2 Physicochemical Methods 567
9.3.1.3 *In Vitro* Methods 569
9.3.1.4 *In Situ* Methods 571
9.3.1.5 *In Vivo* Methods 571
9.3.1.6 Modeling: Everted Gut 572
9.3.1.7 Modeling: Single Pass and Recirculating Perfusion 575
9.3.2 Skin 583
9.3.2.1 Mechanistic Models 586
9.3.2.2 Empirical Models 596
9.4 Conclusions 598
References 598
