

Basic Electromagnetism and Materials

ANDRÉ MOLITON

Foreword by Arthur J. Epstein

 Springer

Contents

Chapter 1. Introduction to the fundamental equations of electrostatics and magnetostatics in vacuums and conductors.....	1
1.1. Vectorial analysis.....	1
1.1.1. Operators.....	1
1.1.2. Important formulae.....	4
1.1.3. Vectorial integrations.....	4
1.1.4. Terminology.....	7
1.2. Electrostatics and vacuums.....	8
1.2.1. Coulomb's law.....	8
1.2.2. The electric field: local properties and its integral.....	9
1.2.3. Gauss's theorem.....	10
1.2.4. The Laplace and Poisson equations.....	14
1.3. The current density vector: conducting media and electric currents.....	16
1.3.1. The current density vector	16
1.3.2. Local charge conservation equation.....	17
1.3.3. Stationary regimes	17
1.3.4. Ohm's law and its limits.....	20
1.3.5. Relaxation of a conductor.....	23
1.3.6. Comment: definition of surface current (current sheet).....	24
1.4. Magnetostatics.....	24
1.4.1. Magnetic field formed by a current.....	25
1.4.2. Vector potential	26

1.4.3. <i>Local properties and the integral of \vec{B}</i>	26
1.4.4. <i>Poisson's equation for the vector potential</i>	26
1.4.5. <i>Properties of the vector potential \vec{A}</i>	27
1.4.6. <i>The Maxwell-Ampere relation</i>	28
1.5 Problems.....	31
1.5.1. <i>Calculations</i>	31
1.5.2. <i>Field and potential generated inside and outside of a charged sphere</i>	33
Chapter 2. Electrostatics of dielectric materials	39
2.1. Introduction: dielectrics and their polarization	39
2.1.1. <i>Definition of a dielectric and the nature of the charges</i>	39
2.1.2. <i>Characteristics of dipoles</i>	40
2.1.3. <i>Dielectric in a condenser</i>	42
2.1.4. <i>The polarization vector</i>	43
2.2. Polarization equivalent charges	44
2.2.1. <i>Calculation for charges equivalent to the polarization</i>	44
2.2.2. <i>Physical characteristics of polarization and polarization charge distribution</i>	46
2.2.3. <i>Important comment: under dynamic regimes the polarization charges are the origin of polarization currents</i>	50
2.3. Vectors (\vec{E}) and an electric displacement (\vec{D}): characteristics at interfaces	51
2.3.1. <i>Vectors for an electric field (\vec{E}) and an electric displacement (\vec{D}): electric potentials</i>	51
2.3.2. <i>Gauss's theorem</i>	52
2.3.3. <i>Conditions under which \vec{E} and \vec{D} move between two dielectrics</i>	53
2.3.4. <i>Refraction of field or induction lines</i>	56
2.4. Relations between displacement and polarization vectors	56
2.4.1. <i>Coulomb's theorem</i>	56
2.4.2. <i>Representation of the dielectric-armature system</i>	57
2.4.3. <i>Linear, homogeneous and isotropic dielectrics</i>	58
2.4.4. <i>Comments</i>	59
2.4.5. <i>Linear, inhomogeneous and non-isotropic dielectrics</i>	60

2.5 Problems: Lorentz field.....	61
2.5.1. <i>Dielectric sphere</i>	<i>61</i>
2.5.2. <i>Empty spherical cavity.....</i>	<i>62</i>
2.6. The mechanism of dielectric polarization: response to a static field.....	63
2.6.1. <i>Induced polarization and orientation.....</i>	<i>63</i>
2.6.2. <i>Study of the polarization induced in a molecule.....</i>	<i>66</i>
2.6.3. <i>Study of polarization by orientation.....</i>	<i>67</i>
2.7. Problems.....	72
2.7.1. <i>Electric field in a small cubic cavity found within a dielectric.....</i>	<i>72</i>
2.7.2. <i>Polarization of a dielectric strip.....</i>	<i>75</i>
2.7.3. <i>Dielectric planes and charge distribution (electric images).....</i>	<i>77</i>
2.7.4. <i>Atomic polarizability using J.J. Thomson's model.....</i>	<i>81</i>
2.7.5. <i>The field in a molecular sized cavity.....</i>	<i>82</i>
Chapter 3: Magnetic properties of materials.....	89
3.1. Magnetic moment.....	89
3.1.1. <i>Preliminary remarks on how a magnetic field cannot be derived from a uniform scalar potential.....</i>	<i>89</i>
3.1.2. <i>The vector potential and magnetic field at a long distance from a closed circuit.....</i>	<i>89</i>
3.1.3. <i>The analogy of the magnetic moment to the electric moment....</i>	<i>93</i>
3.1.4. <i>Characteristics of magnetic moments $\vec{M} = i \iint_S d\vec{S}$</i>	<i>94</i>
3.1.5. <i>Magnetic moments in materials.....</i>	<i>97</i>
3.1.6. <i>Precession and magnetic moments.....</i>	<i>98</i>
3.2. Magnetic fields in materials.....	100
3.2.1. <i>Magnetization intensity.....</i>	<i>100</i>
3.2.2. <i>Potential vector due to a piece of magnetic material.....</i>	<i>101</i>
3.2.3. <i>The Amperian currents.....</i>	<i>103</i>
3.2.4. <i>Definition of vectors \vec{B} and \vec{H} in materials.....</i>	<i>106</i>
3.2.5. <i>Conditions imposed on moving between two magnetic media....</i>	<i>107</i>
3.2.6. <i>Linear, homogeneous and isotropic (l.h.i) magnetic media.....</i>	<i>109</i>
3.2.7. <i>Comment on the analogy between dielectric and magnetic media.</i>	<i>109</i>

- 3.3. Problems..... 111
 - 3.3.1. *Magnetic moment associated with a surface charged sphere turning around its own axis*..... 111
 - 3.3.2. *Magnetic field in a cavity deposited in a magnetic medium*..... 112
 - 3.3.3. *A cylinder carrying surface currents*..... 114
 - 3.3.4 *Virtual current*..... 116

- Chapter 4: Dielectric and magnetic materials..... 119
 - 4.1. Dielectrics..... 119
 - 4.1.1. *Definitions*..... 119
 - 4.1.2. *Origins and types of breakdowns*..... 120
 - 4.1.3 *Insulators*..... 121
 - 4.1.4 *Electrets* 123
 - 4.1.5. *Ferroelectrics*..... 126
 - 4.2. Magnetic materials..... 129
 - 4.2.1. *Introduction*..... 129
 - 4.2.2. *Diamagnetism and Langevin's theory*..... 131
 - 4.2.3. *Paramagnetism*..... 132
 - 4.2.4. *Ferromagnetism*..... 137
 - 4.2.5. *Antiferromagnetism and ferrimagnetism*..... 150
 - 4.6. Problem..... 151
 - Dielectrics, electrets, magnets, and the gap in spherical armatures*... 151

- Chapter 5. Time-Varying Electromagnetic Fields and Maxwell's equations..... 157
 - 5.1. Variable slow rates and the rate approximation of quasi-static states (RAQSS)..... 157
 - 5.1.1. *Definition*..... 157
 - 5.1.2. *Propagation*..... 157
 - 5.1.3. *Basics of electromagnetic induction*..... 158
 - 5.1.4. *Electric circuit subject to a slowly varying rate*..... 158
 - 5.1.5. *The Maxwell-Faraday relation*..... 159

5.2. Systems under frequencies ($\text{div } \vec{j} \neq 0$) and the Maxwell – Ampere relation.....	160
5.2.1. The shortfall of $\text{rot } \vec{H} = \vec{j}_\ell$ (first form of Ampere's theorem for static regimes).....	160
5.2.2. The Maxwell-Ampere relation.....	161
5.2.3. Physical interpretation of the displacement currents.....	162
5.2.4. Conclusion.....	165
5.3. Maxwell's equations.....	167
5.3.1. Forms of $\text{div } \vec{E}$ and $\text{div } \vec{B}$ under varying regimes.....	167
5.3.2. Summary of Maxwell's equations.....	167
5.3.3. The Maxwell equations and conditions at the interface of two media.....	168
5.4. Problem	170
Values for conduction and displacement currents in various media... ..	170
Chapter 6. General properties of electromagnetic waves and their propagation through vacuums.....	173
6.1. Introduction: equations for wave propagation in vacuums.....	173
6.1.1. Maxwell's equations for vacuums: $\rho_\ell = 0$ and $\vec{j}_\ell = 0$.....	173
6.1.2. Equations of wave propagation.....	173
6.1.3. Solutions for wave propagation equations.....	174
6.2. Different wave types.....	176
6.2.1. Transverse and longitudinal waves.....	176
6.2.2. Planar waves.....	176
6.2.3. Spherical waves.....	177
6.2.4. Progressive waves	178
6.2.5. Stationary waves.....	179
6.3. General properties of progressive planar electromagnetic waves (PPEMW) in vacuums with $\rho_\ell = 0$ and $\vec{j}_\ell = 0$.....	180
6.3.1. \vec{E} and \vec{B} perpendicular to the propagation: TEM waves.....	181
6.3.2. The relation between \vec{E} and \vec{B}	181
6.3.3. Breakdown of a planar progressive electromagnetic wave (PPEMW) to a superposition of two planar progressive EM waves polarized rectilinearly.....	183
6.3.4. Representation and spectral breakdown of rectilinearly polarized PPEMWs.....	184

6.4. Properties of monochromatic planar progressive electromagnetic waves (MPPEMW)..... 186

6.4.1. *The polarization..... 186*

6.4.2. *Mathematical expression for a monochromatic planar wave.... 191*

6.4.3. *The speed of wave propagation and spatial periodicity..... 194*

6.5. Jones's representation..... 195

6.5.1. *Complex expression for a monochromatic planar wave..... 195*

6.5.2. *Representation by way of Jones's matrix..... 196*

6.6. Problems..... 199

6.6.1. *Breakdown in real notation of a rectilinear wave into 2 opposing circular waves..... 199*

6.6.2. *The particular case of an anisotropic medium and the example of a phase retarding strip..... 200*

6.6.3. *Jones's matrix based representation of polarization..... 202*

Chapter 7. Electromagnetic waves in absorbent and dispersing infinite materials and the Poynting vector..... 205

7.1. Propagation of electromagnetic waves in an unlimited and uncharged material for which $\rho_\ell = 0$ and $\mathbf{j}_\ell = 0$. Expression for the dispersion of electromagnetic waves..... 205

7.1.1. *Aide memoir: the Maxwell equation for a material where $\rho_\ell = 0$ and $\mathbf{j}_\ell = 0$ 205*

7.1.2. *General equations for propagation..... 205*

7.1.3. *A monochromatic electromagnetic wave in a linear, homogeneous and isotropic material..... 206*

7.1.4. *A case specific to monochromatic planar progressive electromagnetic waves (or MPPEM wave for short)..... 208*

7.2. The different types of media..... 210

7.2.1. *Non-absorbing media and indices..... 210*

7.2.2. *Absorbent media, and complex indices.....212*

7.3. The energy of an electromagnetic plane wave and the Poynting vector 215

7.3.1. *Definition and physical significance for media of absolute permittivity (ϵ), magnetic permeability (μ) and subject to a conduction current (\mathbf{j}_ℓ)..... 215*

7.3.2. *Propagation velocity of energy in a vacuum 217*

7.3.3. *Complex notation*..... 218

7.3.4. *The Poynting vector and the average power for a MPPEM wave in a non-absorbent (k and n are real) and non-magnetic ($\mu_r = 1$, so that $\mu = \mu_0$) medium*..... 219

7.3.5. *Poynting vector for a MPPEM wave in an absorbent dielectric such that μ is real*..... 219

7.4 Problem..... 220

Poynting vector..... 220

Chapter 8. Waves in plasmas and dielectric, metallic, and magnetic materials 227

8.1. Interactions between electromagnetic wave and materials.....227

8.1.1. *Parameters under consideration*.....227

8.1.2. *The various forces involved in conventionally studied materials*..... 228

8.2. Interactions of EM waves with linear, homogeneous and isotropic (lhi) dielectric materials: electronic polarization, dispersion and absorption..... 229

8.2.1. *The Drude Lorentz model*..... 231

8.2.2. *The form of the polarization and the dielectric permittivity*..... 232

8.2.3. *Study of the curves $\chi_e'(\omega)$ and $\chi_e''(\omega)$ for $\omega \approx \omega_0$* 234

8.2.4. *Study of the curves of $\chi_e'(\omega)$ and $\chi_e''(\omega)$ when $\omega \neq \omega_0$* 238

8.2.5. *The (zero) pole of the dielectric function*..... 240

8.2.6. *Behavior of a transverse plane progressive EM wave which has a pulsation between ω_0 and ω_ℓ sufficiently far from ω_0 so that $\epsilon'' \approx 0$* 241

8.2.7. *Study of an MPPEM wave both outside the absorption zone and the range $[\omega_0, \omega_\ell]$* 241

8.2.8. *Equation for dispersion $n = f(\lambda_0)$ when $\omega \ll \omega_0$* 243

8.3. Propagation of a MPPEM wave in a plasma (or the dielectric response of an electronic gas)..... 245

8.3.1. *Plasma oscillations and pulsations*..... 245

8.3.2. *The dielectric response of an electronic gas*..... 248

8.4. Propagation of an EM wave in a metallic material (frictional forces)..... 252

8.5. Uncharged magnetic media..... 256
 8.5.1. Dispersion equation in conducting magnetic media..... 256
 8.5.2. Impedance characteristics (when k is real)..... 257
 8.6. Problems..... 258
 8.6.1. The complex forms for polarisation and dielectric permittivity..... 258
 8.6.2. A study of the electrical properties of a metal 263

Chapter 9. Electromagnetic field sources, dipolar radiation and antennae..... 267

9.1. Introduction..... 267
 9.2. The Lorentz gauge and retarded potentials 268
 9.2.1. Lorentz's gauge..... 268
 9.2.2. Equation for the propagation of potentials, and retarded potentials 273
 9.3. Dipole field at a great distance 275
 9.3.1. Expression for the potential vector \vec{A} 275
 9.3.2. Expression for the electromagnetic field in the radiation zone .. 277
 9.3.3. Power radiated by a dipole..... 278
 9.4. Antennas..... 280
 9.4.1. Principle: a short antenna where $\ell \ll \lambda$ 280
 9.4.2. General remarks on various antennae: half-wave and 'whip' antennae 283
 9.5. Problem 285
 Radiation from a half-wave antenna..... 286

Chapter 10. Interactions between materials and electromagnetic waves, and diffusion and absorption processes..... 289

10.1. Introduction..... 289
 10 .2. Diffusion mechanisms 289
 10.2.1. Rayleigh diffusion: radiation diffused by charged particles.... 289
 10.2.2. Radiation due to Rutherford diffusion..... 294

10.3. Radiation produced by accelerating charges: synchrotron radiation and bremsstrahlung.....	297
10.3.1. Synchrotron radiation.....	297
10.3.2. Bremsstrahlung: electromagnetic stopping radiation.....	297
10. 4. Process of absorption or emission of electromagnetic radiation by atoms or molecules (to approach as part of a second reading)	298
10.4.1. The problem.....	298
10.4.2. Form of the interaction Hamiltonian.....	298
10.4.3. Transition rules.....	302
10.5. Conclusion: introduction to atomic and molecular spectroscopy...	306
10.5.1. Result concerning the dipole approximation.....	306
10.5.2. Different transitions possible in an electromagnetic spectrum.....	307
10.5.3. Conclusion.....	309
10.6. Problems.....	309
10.5.1. Problem 1. Diffusion due to bound electrons.....	309
10.5.2. Problem 2. Demonstration of the relationship between matrix elements.....	313
Chapter 11. Reflection and refraction of electromagnetic waves in absorbent materials of finite dimensions.....	317
11.1. Introduction.....	317
11.2. Law of reflection and refraction.....	318
11.2.1. Representation of the system.....	318
11.2.2. Conservation of angular frequency	319
11.2.3. Form of the wave vectors with respect to the symmetry of the media.....	320
11.2.4. Symmetry and linear properties of the media	321
11.2.5. Snell-Descartes law	322
11.2.6. Equation for the electric field in medium (1): the law of reflection.....	323
11.2.7. The Snell-Descartes law for reflection a system where medium (2) can be absorbent: n_2 and k_2 are complex	325
11.3. Coefficients for reflection and transmission of a monochromatic plane progressive EM wave at the interface between two non-absorbent lhi dielectrics (n_1, n_2 real), and the Fresnel equations....	331

11.3.1. Hypothesis and aim of the study..... 331

11.3.2. Fresnel equations for perpendicular polarizations (TE)..... 333

11.3.3. Fresnel's equations for parallel magnetic field polarizations.. 337

11.3.4. Reflection coefficients and energy transmission 342

11.3.5. Total and frustrated total reflection..... 346

11.4. Reflection and absorption by an absorbing medium 348

11.4.1. Reflection coefficient for a wave at a normal incidence to an interface between a non-absorbent medium (1) (index of n_1) and an absorbent medium (2) (index of n_2)..... 348

11.4.2. Optical properties of a metal: reflection and absorption at low and high frequencies by a conductor..... 349

11.5. The anti-echo condition: reflection from a magnetic layer; a study of an anti-radar structure; and a Dallenbach layer.....350

11.5.1. The anti-echo condition: reflection from a non-conducting magnetic layer..... 350

11.5.2. The Dallenbach layer: an anti-radar structure..... 352

11.6. Problems..... 356

11.6.1. Reflection and absorption at low and high frequencies by a conductor..... 356

11.6.2. Limited penetration of Hertzian waves in sea water.....362

Chapter 12. Total reflection and guided propagation of electromagnetic waves in materials of finite dimensions..... 367

12.1. Introduction..... 367

12.2. A coaxial line..... 369

12.2.1. Form of transverse EM waves in a coaxial cable..... 369

12.2.2. Form of the potential, the intensity, and the characteristic impedance of the cable..... 371

12.2.3. Electrical power transported by an EM wave..... 373

12.2.4. Conductor with an imperfect core 374

12.3. Preliminary study of the normal reflection..... 374

12.3.1. Properties of a perfect conductor..... 374

12.3.2. Equation for the stationary wave following reflection..... 376

12.3.3. Study of the form of the surface charge densities and the current at the metal..... 377

12.4. Study of propagation guided between two plane conductors.....	380
<i>12.4.1. Wave form and equation for propagation</i>	<i>380</i>
<i>12.4.2. Study of transverse EM waves</i>	<i>381</i>
<i>12.4.3. Study of transverse electric waves (TE waves).....</i>	<i>383</i>
<i>12.4.4. Generalization of the study of TE wave propagation.....</i>	<i>388</i>
12.5. Optical guiding: general principles and how fibers work.....	399
<i>12.5.1. Principle.....</i>	<i>399</i>
<i>12.5.2. Guiding conditions.....</i>	<i>400</i>
<i>12.5.3. Increasing the signals.....</i>	<i>401</i>
12.6. Electromagnetic characteristics of a symmetrical monomodal	
guide.....	402
<i>12.6.1. General form of the solutions.....</i>	<i>403</i>
<i>12.6.2. Solutions for zone (2) with an index denoted by n.....</i>	<i>404</i>
<i>12.6.3. Solutions for the zones (1) and (3).....</i>	<i>405</i>
<i>12.6.4. Equations for the magnetic field.....</i>	<i>408</i>
<i>12.6.5. Use of the limiting conditions: determination of constants....</i>	<i>408</i>
<i>12.6.6. Modal equation.....</i>	<i>410</i>
<i>12.6.7. Comments: alternative methodologies</i>	<i>415</i>
<i>12.6.8. Field distribution and solution parity.....</i>	<i>417</i>
<i>12.6.9. Guide characteristics.....</i>	<i>419</i>
12.7. Problem.....	423
<i>Monomodal conditions.....</i>	<i>423</i>
 Index	 427
