Quantum Field Theory

CAMBRIDGE

Contents

<i>Preface for students</i>	page xi
<i>Preface for instructors</i>	xv
<i>Acknowledgments</i>	xx
Part I Spin Zero	1
1 Attempts at relativistic quantum mechanics	3
2 Lorentz invariance (prerequisite: 1)	15
3 Canonical quantization of scalar fields (2)	22
4 The spin-statistics theorem (3)	31
5 The LSZ reduction formula (3)!	35
6 Path integrals in quantum mechanics	43
7 The path integral for the harmonic oscillator (6)	50
8 The path integral for free field theory (3, 7)	54
9 The path integral for interacting field theory (8)	58
10 Scattering amplitudes and the Feynman rules (5, 9)	73
11 Cross sections and decay rates (10)	79
12 Dimensional analysis with $\hbar = c = 1$ (3)	90
13 The Lehmann–Källén form of the exact propagator (9)	93
14 Loop corrections to the propagator (10, 12, 13)	96
15 The one-loop correction in Lehmann–Källén form (14)	107
16 Loop corrections to the vertex (14)	111
17 Other 1PI vertices (16)	115
18 Higher-order corrections and renormalizability (17)	117
19 Perturbation theory to all orders (18)	121
20 Two-particle elastic scattering at one loop (19)	123
21 The quantum action (19)	127
22 Continuous symmetries and conserved currents (8)	132
23 Discrete symmetries: P , T , C , and Z (22)	140
24 Nonabelian symmetries (22)	146

25	Unstable particles and resonances (14)	150
26	Infrared divergences (20)	157
27	Other renormalization schemes (26)	162
28	The renormalization group (27)	169
29	Effective field theory (28)	176
30	Spontaneous symmetry breaking (21)	188
31	Broken symmetry and loop corrections (30)	192
32	Spontaneous breaking of continuous symmetries (22, 30)	198
Part II Spin One Half		203
33	Representations of the Lorentz group (2)	205
34	Left- and right-handed spinor fields (3, 33)	209
35	Manipulating spinor indices (34)	216
36	Lagrangians for spinor fields (22, 35)	221
37	Canonical quantization of spinor fields I (36)	232
38	Spinor technology (37)	237
39	Canonical quantization of spinor fields II (38)	244
40	Parity, time reversal, and charge conjugation (23, 39)	252
41	LSZ reduction for spin-one-half particles (5, 39)	261
42	The free fermion propagator (39)	267
43	The path integral for fermion fields (9, 42)	271
44	Formal development of fermionic path integrals (43)	275
45	The Feynman rules for Dirac fields (10, 12, 41, 43)	282
46	Spin sums (45)	291
47	Gamma matrix technology (36)	294
48	Spin-averaged cross sections (46, 47)	298
49	The Feynman rules for Majorana fields (45)	303
50	Massless particles and spinor helicity (48)	308
51	Loop corrections in Yukawa theory (19, 40, 48)	314
52	Beta functions in Yukawa theory (28, 51)	324
53	Functional determinants (44, 45)	327
Part III Spin One		333
54	Maxwell's equations (3)	335
55	Electrodynamics in Coulomb gauge (54)	339
56	LSZ reduction for photons (5, 55)	344
57	The path integral for photons (8, 56)	349
58	Spinor electrodynamics (45, 57)	351
59	Scattering in spinor electrodynamics (48, 58)	357
60	Spinor helicity for spinor electrodynamics (50, 59)	362
61	Scalar electrodynamics (58)	371

62	Loop corrections in spinor electrodynamics (51, 59)	376
63	The vertex function in spinor electrodynamics (62)	385
64	The magnetic moment of the electron (63)	390
65	Loop corrections in scalar electrodynamics (61, 62)	394
66	Beta functions in quantum electrodynamics (52, 62)	403
67	Ward identities in quantum electrodynamics I (22, 59)	408
68	Ward identities in quantum electrodynamics II (63, 67)	412
69	Nonabelian gauge theory (24, 58)	416
70	Group representations (69)	421
71	The path integral for nonabelian gauge theory (53, 69)	430
72	The Feynman rules for nonabelian gauge theory (71)	435
73	The beta function in nonabelian gauge theory (70, 72)	439
74	BRST symmetry (70, 71)	448
75	Chiral gauge theories and anomalies (70, 72)	456
76	Anomalies in global symmetries (75)	468
77	Anomalies and the path integral for fermions (76)	472
78	Background field gauge (73)	478
79	Gervais–Neveu gauge (78)	486
80	The Feynman rules for $N \times N$ matrix fields (10)	489
81	Scattering in quantum chromodynamics (60, 79, 80)	495
82	Wilson loops, lattice theory, and confinement (29, 73)	507
83	Chiral symmetry breaking (76, 82)	516
84	Spontaneous breaking of gauge symmetries (32, 70)	526
85	Spontaneously broken abelian gauge theory (61, 84)	531
86	Spontaneously broken nonabelian gauge theory (85)	538
87	The Standard Model: gauge and Higgs sector (84)	543
88	The Standard Model: lepton sector (75, 87)	548
89	The Standard Model: quark sector (88)	556
90	Electroweak interactions of hadrons (83, 89)	562
91	Neutrino masses (89)	572
92	Solitons and monopoles (84)	576
93	Instantons and theta vacua (92)	590
94	Quarks and theta vacua (77, 83, 93)	601
95	Supersymmetry (69)	610
96	The Minimal Supersymmetric Standard Model (89, 95)	622
97	Grand unification (89)	625
	<i>Bibliography</i>	636
	<i>Index</i>	637
