

SERIES IN ASTRONOMY AND ASTROPHYSICS

# AN INTRODUCTION TO THE PHYSICS OF INTERSTELLAR DUST

ENDRIK KRÜGEL

Taylor & Francis  
Taylor & Francis Group

# *Contents*

<b>1</b>	<b>The dielectric permeability</b>	<b>1</b>
1.1	How the electromagnetic field acts on dust . . . . .	1
1.1.1	Electric field and magnetic induction . . . . .	1
1.1.2	Electric polarization of the medium . . . . .	2
1.1.3	Magnetic polarization of the medium . . . . .	6
1.1.4	Free charges and polarization charges . . . . .	7
1.1.5	The field equations . . . . .	9
1.1.6	Waves in a dielectric medium . . . . .	9
1.1.7	Energy dissipation of a grain in a variable field . . . . .	12
1.2	The harmonic oscillator . . . . .	13
1.2.1	The Lorentz model . . . . .	14
1.2.2	Dissipation of energy . . . . .	17
1.2.3	Dispersion relation of the dielectric permeability . . . . .	18
1.2.4	The harmonic oscillator and light . . . . .	20
1.2.5	Radiation damping . . . . .	23
1.2.6	The cross section of an harmonic oscillator . . . . .	24
1.3	Waves in a conducting medium . . . . .	25
1.3.1	The dielectric permeability of a conductor . . . . .	25
1.3.2	Conductivity and the Drude profile . . . . .	27
<b>2</b>	<b>How to evaluate grain cross sections</b>	<b>29</b>
2.1	Defining cross sections . . . . .	29
2.1.1	Cross section for scattering, absorption and extinction	29
2.1.2	Phase function and cross section for radiation pressure	31
2.1.3	Efficiencies, mass and volume coefficients . . . . .	32
2.2	The optical theorem . . . . .	32
2.2.1	The intensity of forward scattered light . . . . .	33
2.2.2	The refractive index of a dusty medium . . . . .	35
2.3	Mie theory for a sphere . . . . .	37
2.3.1	The formalism . . . . .	37
2.3.2	Scattered and absorbed power . . . . .	38
2.4	Polarization and scattering . . . . .	39
2.4.1	The amplitude scattering matrix . . . . .	40
2.4.2	Angle-dependence of scattering . . . . .	41
2.4.3	The polarization ellipse . . . . .	41
2.4.4	Stokes parameters . . . . .	42

2.5	The discrete dipole approximation . . . . .	45
2.6	The Kramers-Kronig relations . . . . .	47
2.6.1	The KK relation for the dielectric permeability . . . . .	47
2.6.2	Three corollaries of the KK relation . . . . .	47
2.7	Composite grains . . . . .	50
2.7.1	Effective medium theories . . . . .	50
2.7.2	The influence of grain size, ice and porosity . . . . .	54
<b>3</b>	<b>Very small and very big particles</b>	<b>59</b>
3.1	Tiny spheres . . . . .	59
3.1.1	Approximating the efficiencies . . . . .	59
3.1.2	Polarization and angle-dependent scattering . . . . .	64
3.1.3	Small-size effects beyond Mie theory . . . . .	64
3.2	Tiny ellipsoids . . . . .	65
3.2.1	Cross section and shape factor of pancakes and cigars	66
3.2.2	Randomly oriented ellipsoids . . . . .	67
3.3	The fields inside a dielectric particle . . . . .	70
3.3.1	Internal field and depolarization field . . . . .	70
3.3.2	Depolarization field and surface charges . . . . .	70
3.3.3	The local field at an atom . . . . .	71
3.3.4	The relation of Clausius-Mossotti . . . . .	72
3.4	Very large particles . . . . .	73
3.4.1	Babinet's theorem . . . . .	73
3.4.2	Reflection and transmission at a plane surface . . . . .	75
3.4.3	Huygens' principle . . . . .	77
3.5	Grains of small refractive index . . . . .	80
3.5.1	Rayleigh Gans particles . . . . .	80
3.5.2	X-ray scattering . . . . .	81
3.5.3	X-ray absorption . . . . .	82
<b>4</b>	<b>Case studies of Mie calculus</b>	<b>85</b>
4.1	Efficiencies of bare spheres . . . . .	85
4.1.1	Scattering and absorption . . . . .	85
4.1.2	Efficiency vs. cross section and volume coefficient . .	90
4.2	Scattering by bare spheres . . . . .	92
4.2.1	The intensity pattern of scattered light . . . . .	92
4.2.2	The polarization of scattered light . . . . .	93
4.3	Linear polarization through extinction . . . . .	96
4.4	Coated spheres . . . . .	97
4.5	Surface modes in small grains . . . . .	99
4.5.1	Small graphite spheres . . . . .	99
4.5.2	Ellipsoids and metals . . . . .	100

<b>5 Structure and composition of dust</b>	<b>101</b>
5.1 Crystal structure . . . . .	101
5.1.1 Translational symmetry . . . . .	101
5.1.2 Lattice types . . . . .	102
5.1.3 The reciprocal lattice . . . . .	105
5.2 Binding in crystals . . . . .	107
5.2.1 Covalent and ionic bonding . . . . .	107
5.2.2 Metals . . . . .	108
5.2.3 van der Waals forces and hydrogen bridges . . . . .	110
5.3 Carbonaceous grains and silicate grains . . . . .	111
5.3.1 Origin of the two major dust constituents . . . . .	111
5.3.2 The bonding in carbon . . . . .	112
5.3.3 Carbon compounds . . . . .	113
5.3.4 Silicates . . . . .	117
5.3.5 The origin of the elements found in dust grains . . . . .	120
5.4 Optical constants of dust materials . . . . .	121
5.5 Grain sizes . . . . .	128
5.5.1 The MRN size distribution . . . . .	128
5.5.2 Collisional fragmentation . . . . .	129
<b>6 Dust radiation</b>	<b>131</b>
6.1 Kirchhoff's law . . . . .	131
6.1.1 The emissivity of dust . . . . .	131
6.1.2 Thermal emission of grains . . . . .	132
6.1.3 Absorption and emission in thermal equilibrium . . . . .	133
6.2 The temperature of big grains . . . . .	134
6.2.1 The energy equation . . . . .	134
6.2.2 Temperature estimates . . . . .	135
6.2.3 Relation between grain size and grain temperature . . . . .	137
6.2.4 Dust temperatures from observations . . . . .	138
6.3 The emission of big grains . . . . .	140
6.3.1 Constant temperature and low optical depth . . . . .	140
6.3.2 Total emission and cooling rate of a grain . . . . .	143
6.4 Calorific properties of solids . . . . .	143
6.4.1 Traveling waves in a crystal . . . . .	145
6.4.2 Internal energy of a grain . . . . .	148
6.4.3 The Debye temperature . . . . .	149
6.4.4 Specific heat . . . . .	150
6.4.5 Two-dimensional lattices . . . . .	151
6.5 Temperature fluctuations of very small grains . . . . .	152
6.5.1 The probability density $P(T)$ . . . . .	153
6.5.2 The transition matrix . . . . .	153
6.5.3 The stochastic time evolution of grain temperature . . . . .	155
6.6 The emission spectrum of very small grains . . . . .	156
6.6.1 Moderate fluctuations . . . . .	156

6.6.2	Strong fluctuations . . . . .	158
6.6.3	Temperature fluctuations and flux ratios . . . . .	159
<b>7</b>	<b>Dust and its environment</b>	<b>161</b>
7.1	Grain charge . . . . .	161
7.1.1	Charge equilibrium in the absence of a UV field . . . . .	161
7.1.2	The photoelectric effect . . . . .	163
7.2	Grain motion . . . . .	166
7.2.1	Random walk . . . . .	167
7.2.2	The drag on a grain subjected to an outer force . . . . .	167
7.2.3	Brownian motion of a grain . . . . .	170
7.3	Dust in the solar system . . . . .	172
7.3.1	Interplanetary dust . . . . .	172
7.3.2	The Poynting-Robertson effect . . . . .	173
7.3.3	Electromagnetic forces on grains: Dust from Io . . . . .	174
7.3.4	Shooting stars and less belligerent meteoroids . . . . .	176
7.4	Grain destruction . . . . .	181
7.4.1	Mass balance of gas and dust in the Milky Way . . . . .	181
7.4.2	Destruction processes . . . . .	183
7.5	Grain formation . . . . .	184
7.5.1	Evaporation temperature and vapor pressure . . . . .	185
7.5.2	Vapor pressure of small grains . . . . .	187
7.5.3	Critical saturation . . . . .	189
7.5.4	Time-dependent homogeneous nucleation . . . . .	190
7.5.5	Steady-state nucleation . . . . .	191
7.5.6	Solutions to time-dependent homogeneous nucleation .	195
<b>8</b>	<b>Grain surfaces</b>	<b>201</b>
8.1	Gas accretion on grains . . . . .	201
8.1.1	Physical adsorption and chemisorption . . . . .	202
8.1.2	The sticking probability . . . . .	205
8.2	Mobility of atoms on grain surfaces . . . . .	206
8.2.1	Thermal hopping . . . . .	207
8.2.2	Evaporation . . . . .	208
8.2.3	Tunneling . . . . .	208
8.2.4	Photodesorption . . . . .	209
8.3	Grain surface chemistry . . . . .	210
8.3.1	Chemical reactions in the gas . . . . .	210
8.3.2	Chemical reactions on dust . . . . .	211
8.3.3	The formation of H <sub>2</sub> in diffuse clouds . . . . .	214
8.4	Ice mantles . . . . .	215

<b>9 PAHs and spectral features of dust</b>	<b>219</b>
9.1 Polycyclic Aromatic Hydrocarbons . . . . .	219
9.1.1 Microcanonic emission of PAHs . . . . .	220
9.1.2 An example: anthracene . . . . .	221
9.1.3 Photo-excitation of PAHs . . . . .	224
9.1.4 Cutoff wavelength for electronic excitation . . . . .	225
9.1.5 Photo-destruction and ionization . . . . .	226
9.1.6 Cross sections and line profiles of PAHs . . . . .	227
9.2 ERE and DIBs . . . . .	229
9.3 The silicate bands at $10\mu\text{m}$ and $18\mu\text{m}$ . . . . .	230
9.3.1 The strength of the resonances . . . . .	230
9.3.2 How the bands change with temperature and grain size . . . . .	231
9.4 Crystalline silicates . . . . .	233
9.4.1 Where they are found and how they form . . . . .	233
9.4.2 Thermal expansion of grains . . . . .	234
9.4.3 The frequency shift of a resonance in grain heating . . . . .	236
9.5 The feature at $3.4\mu\text{m}$ . . . . .	237
<b>10 Interstellar reddening and dust models</b>	<b>239</b>
10.1 Reddening by interstellar grains . . . . .	239
10.1.1 Stellar photometry . . . . .	239
10.1.2 The interstellar extinction curve . . . . .	241
10.1.3 Two-color-diagrams . . . . .	245
10.1.4 Spectral indices . . . . .	246
10.1.5 The mass absorption coefficient . . . . .	246
10.2 Dust models . . . . .	249
10.2.1 Description of the model components . . . . .	250
10.2.2 Extinction and scattering of the dust model . . . . .	252
10.2.3 Extinction and absorption mass coefficients . . . . .	254
<b>11 Radiative transport</b>	<b>259</b>
11.1 Basic transfer relations . . . . .	259
11.1.1 Definition of intensity, mean intensity and flux . . . . .	259
11.1.2 The general transfer equation . . . . .	262
11.1.3 Transfer equation in spherical and slab symmetry . . . . .	264
11.1.4 Frequency averages . . . . .	266
11.1.5 Analytical solutions to the transfer equation . . . . .	267
11.2 Spherical clouds . . . . .	268
11.2.1 Integral equations for the intensity . . . . .	269
11.2.2 Practical hints . . . . .	270
11.3 Passive disks . . . . .	272
11.3.1 Radiative transfer in a plane parallel layer . . . . .	272
11.3.2 Disks of high optical thickness . . . . .	274
11.3.3 The grazing angle . . . . .	275

11.4	Galactic nuclei . . . . .	278
11.4.1	Hot spots in a spherical stellar cluster . . . . .	278
11.4.2	Low and high luminosity stars . . . . .	279
11.5	The pursuit of random photons . . . . .	281
11.5.1	The strategy . . . . .	281
11.5.2	Grains with temperature fluctuations . . . . .	284
11.5.3	Anisotropic scattering . . . . .	286
11.5.4	Practical considerations . . . . .	287
<b>12</b>	<b>Spectral energy distribution of dusty objects</b>	<b>289</b>
12.1	Early stages of star formation . . . . .	289
12.1.1	Globules . . . . .	289
12.1.2	Isothermal gravitationally-bound clumps . . . . .	291
12.1.3	The density structure of a protostar . . . . .	292
12.2	Accretion disks . . . . .	296
12.2.1	Flat disks . . . . .	296
12.2.2	Inflated disks . . . . .	299
12.3	Reflection nebulae . . . . .	302
12.4	Starburst nuclei . . . . .	304
12.5	Mass loss giants . . . . .	307
12.5.1	Flow equations . . . . .	307
12.5.2	Solutions to the flow equations . . . . .	310
12.6	The effective extinction curve . . . . .	314
12.6.1	The effective optical thickness . . . . .	314
12.6.2	Monte Carlo simulations . . . . .	316
<b>A</b>	<b>Various dust related physics</b>	<b>319</b>
A.1	Boltzmann statistics . . . . .	319
A.1.1	The probability of an arbitrary energy distribution . . . . .	319
A.1.2	Partition function and population of energy cells . . . . .	321
A.1.3	The mean energy of harmonic oscillators . . . . .	323
A.1.4	The Maxwellian velocity distribution . . . . .	323
A.2	Quantum statistics . . . . .	325
A.2.1	The unit cell $\hbar^3$ of phase space . . . . .	325
A.2.2	Bosons and fermions . . . . .	326
A.3	Thermodynamics . . . . .	328
A.3.1	The ergodic hypothesis . . . . .	328
A.3.2	Definition of entropy and temperature . . . . .	330
A.3.3	The canonical distribution . . . . .	331
A.3.4	Thermodynamic relations . . . . .	332
A.3.5	Equilibrium conditions of the state functions . . . . .	335
A.4	Blackbody radiation . . . . .	337
A.4.1	The Planck function . . . . .	337
A.4.2	Low and high frequency limit . . . . .	338
A.4.3	The laws of Wien and Stefan-Boltzmann . . . . .	339

A.5	The classical Hamiltonian . . . . .	340
A.5.1	Normal coordinates . . . . .	341
A.6	The Hamiltonian in quantum mechanics . . . . .	342
A.6.1	The time-dependent Schrödinger equation . . . . .	342
A.6.2	Stationary solutions . . . . .	343
A.6.3	The dipole moment of a transition . . . . .	343
A.6.4	The quantized harmonic oscillator . . . . .	344
A.7	The Einstein coefficients $A$ and $B$ . . . . .	346
A.7.1	Induced and spontaneous transitions . . . . .	346
A.8	Potential wells and tunneling . . . . .	348
A.8.1	Wave function of a particle in a constant potential . .	348
A.8.2	Potential walls and Fermi energy . . . . .	349
A.8.3	Rectangular potential barriers . . . . .	350
A.8.4	The double potential well . . . . .	354
<b>B</b>	<b>Miscellaneous</b>	<b>357</b>
B.1	Mathematical notations . . . . .	357
B.2	Mathematical formulae . . . . .	358
B.2.1	Sums and integrals . . . . .	358
B.2.2	The bell curve . . . . .	358
B.2.3	Polynomials . . . . .	359
B.2.4	Vector analysis . . . . .	360
B.2.5	The time average of an harmonically varying field . .	361
B.3	Cosmic constants . . . . .	362
B.4	Problem set . . . . .	363
B.5	List of symbols . . . . .	374
