

**WATER AND  
WASTEWATER  
CALCULATIONS  
MANUAL**

*Second Edition*

**Shun Dar Lin**

# Contents

Preface ix

<b>Chapter 1. Streams and Rivers</b>	<b>1</b>
1 General	2
2 Point Source Dilution	2
3 Discharge Measurement	3
4 Time of Travel	4
5 Dissolved Oxygen and Water Temperature	5
6 Biochemical Oxygen Demand Analysis	10
7 Streeter–Phelps Oxygen Sag Formula	13
8 BOD Models and $K_1$ Computation	14
9 Determination of Reaeration Rate Constant $K_2$	41
10 Sediment Oxygen Demand	49
11 Organic Sludge Deposits	52
12 Photosynthesis and Respiration	54
13 Natural Self-Purification in Streams	55
14 SOD of DO Usage	78
15 Apportionment of Stream Users	79
16 Velz Reaeration Curve (A Pragmatic Approach)	87
17 Stream DO Model (A Pragmatic Approach)	92
18 Biological Factors	107
References	121
<b>Chapter 2. Lakes and Reservoirs</b>	<b>125</b>
1 Lakes and Impoundment Impairments	125
2 Lake Morphometry	126
3 Water Quality Models	130
4 Evaporation	131
5 The Clean Lakes Program	137
References	176

<b>Chapter 3. Groundwater</b>	<b>179</b>
1 Definition	180
2 Hydrogeologic Parameters	184
3 Steady Flows in Aquifers	195
4 Anisotropic Aquifers	197
5 Unsteady (Nonequilibrium) Flows	198
6 Groundwater Contamination	211
7 Setback Zones	217
References	224
<b>Chapter 4. Fundamental and Treatment Plant Hydraulics</b>	<b>227</b>
1 Definitions and Fluid Properties	228
2 Water Flow in Pipes	236
3 Pumps	265
4 Water Flow in Open Channels	272
5 Flow Measurements	291
References	306
<b>Chapter 5. Public Water Supply</b>	<b>307</b>
1 Sources and Quantity of Water	308
2 Population Estimates	311
3 Water Requirements	315
4 Regulations for Water Quality	321
5 Water Treatment Processes	342
6 Aeration and Air Stripping	343
7 Solubility Equilibrium	368
8 Coagulation	371
9 Flocculation	380
10 Sedimentation	384
11 Filtration	392
12 Water Softening	404
13 Ion Exchange	417
14 Iron and Manganese Removal	435
15 Activated Carbon Adsorption	440
16 Membrane Processes	444
17 Residual from Water Plant	458
18 Disinfection	463
19 Water Fluoridation	506
20 Health Risks	513
References	525
<b>Chapter 6. Wastewater Engineering</b>	<b>531</b>
1 What Is Wastewater?	533
2 Characteristics of Wastewater	533
3 Sewer Systems	542
4 Quantity of Wastewater	545

5	Urban Stormwater Management	549
6	Design of Storm Drainage Systems	551
7	Precipitation and Runoff	551
8	Stormwater Quality	556
9	Sewer Hydraulics	562
10	Sewer Appurtenances	562
11	Pumping Stations	568
12	Sewer Construction	572
13	Wastewater Treatment Systems	574
14	Screening Devices	581
15	Comminutors	586
16	Grit Chamber	586
17	Flow Equalization	588
18	Sedimentation	592
19	Primary Sedimentation Tanks	607
20	Biological (Secondary) Treatment Systems	617
21	Activated-Sludge Process	621
22	Trickling Filter	696
23	Rotating Biological Contactor	711
24	Dual Biological Treatment	726
25	Stabilization Ponds	726
26	Secondary Clarifier	735
27	Effluent Disinfection	742
28	Advanced Wastewater Treatment	752
29	Sludge (Residuals) Treatment and Management	796
30	Wetlands	861
	References	884
 <b>Appendix A. Illinois Environmental Protection Agency's Macroinvertebrate Tolerance List</b>		 <b>893</b>
 <b>Appendix B. Well Function for Confined Aquifers</b>		 <b>899</b>
 <b>Appendix C. Solubility Product Constants for Solution at or near Room Temperature</b>		 <b>905</b>
 <b>Appendix D. Freundlich Adsorption Isotherm Constants for Toxic Organic Compounds</b>		 <b>909</b>
 <b>Appendix E. Factors for Conversion</b>		 <b>913</b>
