

SECOND EDITION

SURFACE ACOUSTIC WAVE FILTERS

WITH APPLICATIONS TO ELECTRONIC
COMMUNICATIONS AND SIGNAL PROCESSING

DAVID MORGAN

CONTENTS

<i>Preface</i>	<i>xi</i>
<i>Foreword to second edition</i>	<i>xv</i>
<i>Foreword to previous edition (1991)</i>	<i>xvii</i>
Chapter 1 Basic survey	1
1.1 Acoustic waves in solids	2
1.2 Propagation effects and materials	7
1.3 Basic properties of Interdigital Transducers	9
1.3.1 Transducer reflectivity and the triple-transit signal	9
1.3.2 Non-reflective transducers: delta-function model	11
1.4 Apodization and transversal filtering	18
1.5 Correlation and signal processing	22
1.6 Wireless interrogation: sensors and tags	24
1.7 Resonators and low-loss filters	25
1.7.1 Gratings and resonators	26
1.7.2 Low-loss filters for RF	27
1.7.3 Low-loss filters for IF	29
1.7.4 Performance of bandpass filters	31
1.8 Summary of devices and applications	33
Chapter 2 Acoustic waves in elastic solids	38
2.1 Elasticity in anisotropic materials	38
2.1.1 Non-piezoelectric materials	39
2.1.2 Piezoelectric materials	41
2.2 Waves in isotropic materials	43
2.2.1 Plane waves	44
2.2.2 Rayleigh waves in a half-space	46
2.2.3 Shear-horizontal waves in a half-space	51

2.2.4	Waves in a layered half-space	51
2.2.5	Waves in a parallel-sided plate	55
2.3	Waves in anisotropic materials	57
2.3.1	Plane waves in an infinite medium	57
2.3.2	Theory for a piezoelectric half-space	58
2.3.3	Surface-wave solutions	60
2.3.4	Other solutions	63
2.3.5	Surface waves in layered substrates: perturbation theory	65
Chapter 3 Electrical excitation at a plane surface		68
3.1	Electrostatic case	68
3.2	Piezoelectric half-space	72
3.3	Some properties of the effective permittivity	75
3.4	Green's function	79
3.5	Other applications of the effective permittivity	82
Chapter 4 Propagation effects and materials		87
4.1	Diffraction and beam steering	87
4.1.1	Formulation using angular spectrum of plane waves	88
4.1.2	Beam steering in the near field	90
4.1.3	Minimal-diffraction orientations	91
4.1.4	Diffacted field in the parabolic approximation: scaling	92
4.1.5	Two-transducer devices	95
4.2	Propagation loss and non-linear effects	100
4.3	Temperature effects and velocity errors	101
4.4	Materials for surface-wave devices	104
4.4.1	Orientation: Euler angles	104
4.4.2	Single-crystal materials	105
4.4.3	Thin films	108
Chapter 5 Non-reflective transducers		114
5.1	Analysis for a general array of electrodes	115
5.1.1	The quasi-static approximation	115
5.1.2	Electrostatic equations and charge superposition	118
5.1.3	Current entering one electrode	122
5.1.4	Evaluation of the acoustic potential	123
5.2	Quasi-static analysis of transducers	125
5.2.1	Launching transducer	125
5.2.2	Transducer admittance	127
5.2.3	Receiving transducer	128
5.3	Summary and P -matrix formulation	130

5.4	Transducers with regular electrodes: element factor	134
5.5	Admittance of uniform transducers	139
5.5.1	Acoustic conductance and susceptance	140
5.5.2	Capacitance	143
5.5.3	Comparative performance	144
5.6	Two-transducer devices	145
5.6.1	Device using unapodized transducers	146
5.6.2	Device using an apodized transducer	149
5.6.3	Admittance of apodized transducers	152
5.6.4	Two-transducer device using a multistrip coupler	154
Chapter 6 Bandpass filtering using non-reflective transducers		157
6.1	Basic properties of uniform transducers	158
6.2	Apodized transducer as a transversal filter	161
6.3	Design of transversal filters	169
6.3.1	Use of window functions	169
6.3.2	Optimized design: the Remez algorithm	173
6.3.3	Withdrawal weighting	175
6.4	Filter design and performance	177
Chapter 7 Correlators for pulse compression radar and communications		183
7.1	Pulse compression radar	184
7.2	Chirp waveforms	187
7.2.1	Waveform characteristics	187
7.2.2	Weighting of linear-chirp filters	192
7.3	Interdigital chirp transducers and filters	196
7.3.1	Chirp transducer analysis	197
7.3.2	Transducer design	202
7.3.3	Filter design and performance	204
7.4	Reflective array compressors	208
7.5	Doppler effects and spectral analysis	210
7.6	Correlation in spread-spectrum communications	212
7.6.1	Principles of spread-spectrum systems	212
7.6.2	Linear matched filters for PSK	214
7.6.3	Non-linear convolvers	215
Chapter 8 Reflective gratings and transducers		225
8.1	Reflective array method for gratings and transducers	226
8.1.1	Infinite-length grating	226

8.1.2	Finite-length grating	229
8.1.3	Transducer with regular electrodes	231
8.1.4	Reflectivity and velocity for single-electrode transducers	233
8.2	Coupling of Modes (COM) Equations	238
8.2.1	Derivation of equations	238
8.2.2	General solution for a uniform transducer	242
8.2.3	The Natural SPUDT effect in single-electrode transducers	248
8.3	Numerical evaluation of COM parameters	251
8.3.1	Theoretical methods for periodic structures	251
8.3.2	Coupled-mode parameters from band edge frequencies	256
 Chapter 9 Unidirectional transducers and their application to bandpass filtering		 263
9.1	General considerations	264
9.2	DART mechanism and analysis	266
9.3	Bandpass filtering using DARTs	274
9.4	Other SPUDT structures and analysis for parameters	278
9.5	Other SPUDT filters	282
9.6	Other low-loss techniques	286
 Chapter 10 Waveguides and transversely coupled resonator filters		 293
10.1	Basic strip waveguides	294
10.2	Waveguide modes in interdigital devices	299
10.3	Analysis for general waveguides	302
10.4	Transversely-Coupled Resonator (TCR) filter	304
10.5	Unbound waveguide modes	309
10.6	Waveguides including electrode reflectivity	312
 Chapter 11 Resonators and resonator filters		 317
11.1	Resonator types	318
11.1.1	Gratings and cavities	318
11.1.2	Single-port resonator	322
11.1.3	Two-port resonator	326
11.1.4	Single-electrode transducer as resonator	330
11.2	Surface-wave oscillators	332
11.3	Impedance Element Filters	335
11.4	Leaky waves	340
11.4.1	Leaky waves and surface-skimming bulk waves	340

11.4.2	Leaky waves in lithium tantalate	342
11.4.3	Coupled-mode analysis of gratings and transducers	346
11.4.4	Other leaky waves	351
11.5	Longitudinally-Coupled Resonator (LCR) filters	352
Appendix A Fourier transforms and linear filters		359
A.1	Fourier transforms	359
A.2	Linear filters	363
A.3	Matched filtering	366
A.4	Non-uniform sampling	369
A.5	Some properties of bandpass waveforms	371
A.6	Hilbert transforms	376
Appendix B Reciprocity		378
B.1	General relation for a mechanically free surface	378
B.2	Reciprocity for two-terminal transducers	379
B.3	Symmetry of the green's function	383
B.4	Reciprocity for surface excitation of a half-space	384
B.5	Reciprocity for surface-wave transducers	384
B.6	Surface-wave generation	387
Appendix C Elemental charge density for regular electrodes		390
C.1	Some properties of legendre functions	390
C.2	Elemental charge density	393
C.3	Net charges on electrodes	395
Appendix D P-matrix relations		397
D.1	General relations	397
D.2	Cascading formulae	400
Appendix E Electrical loading in an array of regular electrodes		409
E.1	General solution for low frequencies	409
E.2	Propagation outside the stop band	414
E.3	Stop bands	417
E.4	Theory of the multistrip coupler	421
Index		423
