

THE MECHANICS OF SOILS AND FOUNDATIONS

SECOND EDITION

SPON TEXT

JOHN ATKINSON

Contents

<i>Preface to the 1st edition</i>	<i>xiv</i>
<i>Preface to the 2nd edition</i>	<i>xvii</i>
<i>A note on units</i>	<i>xix</i>
<i>Greek alphabet</i>	<i>xx</i>
<i>Glossary of symbols</i>	<i>xxi</i>
<i>Some simple experiments to illustrate geotechnical engineering</i>	<i>xxvi</i>
1 Introduction to geotechnical engineering	1
1.1 What is geotechnical engineering?	1
1.2 Principles of engineering	3
1.3 Fundamentals of mechanics	3
1.4 Material behaviour	4
1.5 Basic characteristics of soils	7
1.6 Basic forms of geotechnical structure	7
1.7 Factors of safety and load factors	8
1.8 Standards and codes of practice	10
1.9 Summary	10
Further reading	11
2 Basic mechanics	12
2.1 Introduction	12
2.2 Stresses and strains	12
2.3 Plane strain and axial symmetry	14
2.4 Rigid body mechanics	14
2.5 Analysis of stress	16
2.6 Analysis of strain	16
2.7 Stress ratio and dilation	18
2.8 Slip surfaces	20
2.9 Summary	21
Worked examples	21
Further reading	23

3	Essentials of material behaviour	24
3.1	<i>Stress–strain behaviour, stiffness and strength</i>	24
3.2	<i>Choice of parameters for stress and strain</i>	25
3.3	<i>Strength</i>	28
3.4	<i>Brittle and ductile</i>	30
3.5	<i>Stiffness</i>	31
3.6	<i>Strength, stiffness and rigidity</i>	32
3.7	<i>Constitutive equations</i>	33
3.8	<i>Elasticity</i>	34
3.9	<i>Perfect plasticity</i>	35
3.10	<i>Combined elasto–plastic behaviour</i>	37
3.11	<i>Time and rate effects</i>	41
3.12	<i>Summary</i>	42
	<i>Worked examples</i>	42
	<i>Further reading</i>	43
4	The structure of the Earth	44
4.1	<i>Introduction</i>	44
4.2	<i>The Earth’s crust</i>	44
4.3	<i>Geological processes</i>	46
4.4	<i>Stratigraphy and the age of soils and rocks</i>	46
4.5	<i>Depositional environments</i>	47
4.6	<i>Recent geological events</i>	50
4.7	<i>Importance of geology in geotechnical engineering</i>	52
	<i>Further reading</i>	52
5	Classification of soils	53
5.1	<i>Description and classification</i>	53
5.2	<i>Description of soils</i>	53
5.3	<i>Soil particle sizes, shapes and gradings</i>	54
5.4	<i>Properties of fine-grained soils</i>	56
5.5	<i>Specific volume, water content and unit weight</i>	57
5.6	<i>Limits of consistency</i>	58
5.7	<i>Current state</i>	60
5.8	<i>Origins of soils</i>	61
5.9	<i>Summary</i>	62
	<i>Worked examples</i>	62
	<i>References</i>	65
	<i>Further reading</i>	65
6	Pore pressure, effective stress and drainage	66
6.1	<i>Introduction</i>	66
6.2	<i>Stress in the ground</i>	66
6.3	<i>Groundwater and pore pressure</i>	67

6.4	<i>Suctions in saturated soil</i>	68
6.5	<i>Effective stress</i>	70
6.6	<i>Importance of effective stress</i>	71
6.7	<i>Demonstrations of effective stress</i>	72
6.8	<i>Volume change and drainage</i>	74
6.9	<i>Drained loading, undrained loading and consolidation</i>	75
6.10	<i>Rates of loading and drainage</i>	77
6.11	<i>Summary</i>	79
	<i>Worked examples</i>	79
	<i>Reference</i>	84
7	Laboratory testing of soils	85
7.1	<i>Purposes of laboratory tests</i>	85
7.2	<i>Standard tests and specifications</i>	86
7.3	<i>Basic classification tests</i>	86
7.4	<i>Measurement of coefficient of permeability</i>	88
7.5	<i>Principal features of soil loading tests</i>	90
7.6	<i>One-dimensional compression and consolidation (oedometer) tests</i>	92
7.7	<i>Shear tests</i>	92
7.8	<i>Conventional triaxial compression tests</i>	93
7.9	<i>Hydraulic triaxial cells – stress path tests</i>	96
7.10	<i>Comments on soil testing</i>	98
7.11	<i>Summary</i>	99
	<i>Worked examples</i>	99
	<i>Further reading</i>	104
8	Compression and swelling	105
8.1	<i>Introduction</i>	105
8.2	<i>Isotropic compression and swelling</i>	105
8.3	<i>Overconsolidation and yield stress ratio</i>	108
8.4	<i>State of soils on the wet side and on the dry side of critical</i>	110
8.5	<i>One-dimensional compression and swelling</i>	112
8.6	<i>Horizontal stress in one-dimensional loading</i>	114
8.7	<i>Summary</i>	116
	<i>Worked examples</i>	116
	<i>Further reading</i>	118
9	Critical state strength of soil	119
9.1	<i>Behaviour of soil in shear tests</i>	119
9.2	<i>Peak, critical state and residual strengths</i>	121
9.3	<i>Critical states</i>	122
9.4	<i>Undrained strength</i>	124
9.5	<i>Total and effective stress analyses</i>	126
9.6	<i>Normalizing</i>	126

9.7	<i>Critical state strength of soils measured in triaxial tests</i>	127
9.8	<i>Relationships between strength measured in shear and triaxial tests</i>	132
9.9	<i>State and state parameters</i>	132
9.10	<i>Simple experimental investigations of critical states</i>	134
9.11	<i>True cohesion in soils</i>	136
9.12	<i>Summary</i>	136
	<i>Worked examples</i>	137
	<i>References</i>	141
	<i>Further reading</i>	141
10	Peak states	142
10.1	<i>Introduction</i>	142
10.2	<i>Mohr–Coulomb line for peak strength in shear tests</i>	142
10.3	<i>Mohr–Coulomb line for peak strength in triaxial tests</i>	146
10.4	<i>A power law equation for peak strength</i>	147
10.5	<i>Peak states and dilation</i>	150
10.6	<i>Comparison between the Mohr–Coulomb and the stress–dilatancy theories</i>	154
10.7	<i>Relationship between peak strength and state parameter</i>	155
10.8	<i>Summary</i>	156
	<i>Worked examples</i>	157
	<i>Reference</i>	160
	<i>Further reading</i>	160
11	Behaviour of soil before failure	161
11.1	<i>Introduction</i>	161
11.2	<i>Wet side and dry side of critical</i>	161
11.3	<i>State boundary surface for soil</i>	164
11.4	<i>Elastic behaviour at states inside the state boundary surface</i>	166
11.5	<i>Soil behaviour during undrained loading</i>	168
11.6	<i>Stress ratio and dilation</i>	170
11.7	<i>Slip planes and apparent errors in test results</i>	171
11.8	<i>Summary</i>	173
	<i>Worked examples</i>	173
	<i>Reference</i>	176
	<i>Further reading</i>	176
12	Cam clay	177
12.1	<i>Introduction</i>	177
12.2	<i>Basic features of the Cam clay models</i>	177
12.3	<i>State boundary surface for ordinary Cam clay</i>	178
12.4	<i>Calculation of plastic strains</i>	181
12.5	<i>Yielding and hardening</i>	181

12.6	<i>Complete constitutive equations for ordinary Cam clay</i>	183
12.7	<i>Applications of Cam clay in design</i>	184
12.8	<i>Summary</i>	184
	<i>Worked examples</i>	185
	<i>References</i>	185
	<i>Further reading</i>	186
13	Stiffness of soil	187
13.1	<i>Introduction</i>	187
13.2	<i>Cam clay and soil stiffness</i>	187
13.3	<i>Stiffness-strain relationships for soil</i>	188
13.4	<i>Strains in the ground</i>	191
13.5	<i>Measurement of soil stiffness in laboratory tests</i>	192
13.6	<i>Stiffness of soil at small and very small strains</i>	193
13.7	<i>Rigidity and non-linearity</i>	196
13.8	<i>Numerical modelling of soil stiffness</i>	198
13.9	<i>Summary</i>	199
	<i>References</i>	200
	<i>Further reading</i>	200
14	Steady state seepage	201
14.1	<i>Groundwater conditions</i>	201
14.2	<i>Practical problems of groundwater flow</i>	202
14.3	<i>Essentials of steady state seepage</i>	204
14.4	<i>Flow through a simple flownet</i>	206
14.5	<i>Flownet for two-dimensional seepage</i>	208
14.6	<i>Piping and erosion</i>	210
14.7	<i>Seepage through anisotropic soils</i>	211
14.8	<i>Summary</i>	211
	<i>Worked examples</i>	212
	<i>Further reading</i>	214
15	Consolidation	215
15.1	<i>Basic mechanism of consolidation</i>	215
15.2	<i>Theory for one-dimensional consolidation</i>	215
15.3	<i>Isochrones</i>	218
15.4	<i>Properties of isochrones</i>	218
15.5	<i>Solution for one-dimensional consolidation by parabolic isochrones</i>	220
15.6	<i>Other consolidation solutions</i>	224
15.7	<i>Determination of c_v from oedometer tests</i>	224
15.8	<i>Continuous loading and consolidation</i>	226
15.9	<i>Summary</i>	228
	<i>Worked examples</i>	229
	<i>References</i>	231

16	Natural soils	232
16.1	<i>Characteristics of natural soils</i>	232
16.2	<i>One-dimensional compression and swelling of soils in the ground</i>	233
16.3	<i>Changes of state and yield stress ratio in natural soils</i>	235
16.4	<i>Effects of volume changes due to vibration or creep</i>	236
16.5	<i>Influence of layering in sedimented soils</i>	238
16.6	<i>Influence of bonding and weathering</i>	238
16.7	<i>Changes in pore water salinity</i>	240
16.8	<i>Summary</i>	241
	<i>References</i>	241
	<i>Further reading</i>	241
17	Ground investigations	242
17.1	<i>Introduction</i>	242
17.2	<i>Objectives of ground investigations</i>	242
17.3	<i>Planning and doing investigations</i>	244
17.4	<i>Test pitting, drilling and sampling</i>	245
17.5	<i>In situ testing</i>	247
17.6	<i>Investigating groundwater and permeability</i>	249
17.7	<i>Ground investigation reports</i>	251
17.8	<i>Summary</i>	253
	<i>References</i>	254
	<i>Further reading</i>	254
18	Soil parameters for design	255
18.1	<i>Introduction</i>	255
18.2	<i>Principles of design</i>	255
18.3	<i>Description and classification</i>	257
18.4	<i>Drained or undrained or consolidation: total or effective stress parameters</i>	257
18.5	<i>Ultimate limit state: critical state and residual strengths and factors of safety</i>	259
18.6	<i>Serviceability limit state: peak strength with a load factor</i>	262
18.7	<i>Serviceability limit state: soil stiffness and design loads</i>	263
18.8	<i>Parameters related to description and classification</i>	265
18.9	<i>States of soils in the ground</i>	267
18.10	<i>Accounting for variability</i>	268
18.11	<i>Summary</i>	269
	<i>References</i>	270
19	Ultimate stability of soil structures using bound methods	271
19.1	<i>Introduction</i>	271
19.2	<i>Factors</i>	272

19.3	<i>Theorems of plastic collapse</i>	272
19.4	<i>Compatible mechanisms of slip surfaces</i>	274
19.5	<i>Work done by internal stresses and external loads</i>	275
19.6	<i>Simple upper bounds for a foundation</i>	278
19.7	<i>Discontinuous equilibrium stress states</i>	279
19.8	<i>Simple lower bounds for a foundation</i>	283
19.9	<i>Upper and lower bound solutions using fans</i>	284
19.10	<i>Bound solutions for the bearing capacity of a foundation for undrained loading using fans</i>	290
19.11	<i>Bound solutions for the bearing capacity of a foundation for drained loading using fans</i>	292
19.12	<i>Summary</i>	295
	<i>Worked examples</i>	295
	<i>Further reading</i>	302
20	Limit equilibrium method	303
20.1	<i>Theory of the limit equilibrium method</i>	303
20.2	<i>Simple limit equilibrium solutions</i>	304
20.3	<i>Coulomb wedge analyses</i>	306
20.4	<i>Simple slip circle analyses for undrained loading</i>	310
20.5	<i>Slip circle method for drained loading – the method of slices</i>	310
20.6	<i>Other limit equilibrium methods</i>	314
20.7	<i>Limit equilibrium solutions</i>	316
20.8	<i>Summary</i>	316
	<i>Worked examples</i>	316
	<i>References</i>	321
	<i>Further reading</i>	321
21	Stability of slopes	322
21.1	<i>Introduction</i>	322
21.2	<i>Types of instability</i>	322
21.3	<i>Parameters and factors for design of slopes</i>	324
21.4	<i>Stress changes in slopes</i>	325
21.5	<i>Influence of water on stability of slopes</i>	328
21.6	<i>Stability of infinite slopes</i>	330
21.7	<i>Influence of seepage on the stability of infinite slopes</i>	336
21.8	<i>Stability of vertical cuts</i>	337
21.9	<i>Routine slope stability analyses</i>	340
21.10	<i>Behaviour of simple excavations</i>	342
21.11	<i>Summary</i>	343
	<i>Worked examples</i>	343
	<i>References</i>	344
	<i>Further reading</i>	344

22	Bearing capacity and settlement of shallow foundations	345
22.1	<i>Types of foundations</i>	345
22.2	<i>Foundation behaviour</i>	347
22.3	<i>Soil strength parameters and factors for design of shallow foundations</i>	348
22.4	<i>Stress changes in foundations</i>	350
22.5	<i>Bearing capacity of shallow foundations</i>	351
22.6	<i>Foundations on sand</i>	354
22.7	<i>Combined vertical and horizontal loading on shallow foundations</i>	354
22.8	<i>Foundations in elastic soil</i>	356
22.9	<i>Parameters for elastic analyses</i>	359
22.10	<i>Consolidation settlements for one-dimensional loading</i>	360
22.11	<i>Heave and settlement of foundations due to changes of groundwater</i>	362
22.12	<i>Summary</i>	364
	<i>Worked examples</i>	365
	<i>References</i>	368
	<i>Further reading</i>	368
23	Piled foundations	369
23.1	<i>Types of piled foundations</i>	369
23.2	<i>Base resistance of single piles</i>	371
23.3	<i>Shaft friction on piles</i>	372
23.4	<i>Pile testing and driving formulae</i>	373
23.5	<i>Capacity of pile groups</i>	374
23.6	<i>Summary</i>	375
	<i>References</i>	376
	<i>Further reading</i>	376
24	Earth pressures and stability of retaining walls	377
24.1	<i>Introduction</i>	377
24.2	<i>Earth pressures</i>	377
24.3	<i>Types of retaining structure</i>	378
24.4	<i>Failure of retaining walls</i>	378
24.5	<i>Stress changes in soil near retaining walls</i>	379
24.6	<i>Influence of water on retaining walls</i>	383
24.7	<i>Calculation of earth pressures – drained loading</i>	384
24.8	<i>Calculation of earth pressures – undrained loading</i>	386
24.9	<i>Overall stability</i>	387
24.10	<i>Soil strength and factors for design of retaining walls</i>	391
24.11	<i>Summary</i>	393
	<i>Worked examples</i>	393
	<i>Further reading</i>	396

25	Tunnelling in soft ground	397
25.1	<i>Tunnel construction</i>	397
25.2	<i>Construction of bored tunnels in soft ground</i>	397
25.3	<i>Stress changes near tunnels</i>	399
25.4	<i>Stability of tunnel headings</i>	400
25.5	<i>Influence of water on tunnels</i>	403
25.6	<i>Ground movements due to tunnelling</i>	404
25.7	<i>Load factors to limit ground movements</i>	406
25.8	<i>Summary</i>	407
	<i>References</i>	407
	<i>Further reading</i>	407
26	Behaviour of unsaturated soils	408
26.1	<i>Introduction</i>	408
26.2	<i>Occurrence of unsaturated soils</i>	408
26.3	<i>Degree of saturation and specific volume</i>	408
26.4	<i>Distribution of air and water in unsaturated soil</i>	410
26.5	<i>Pore pressure and suction in unsaturated soil</i>	411
26.6	<i>Desaturation and water retention</i>	411
26.7	<i>Undrained loading of unsaturated soil</i>	413
26.8	<i>Strength of unsaturated soil in slope stability</i>	413
26.9	<i>Settlement of foundations on unsaturated soil</i>	414
26.10	<i>Compaction and compacted soils</i>	415
26.11	<i>Compaction curves and behaviour of compacted soil</i>	416
26.12	<i>Summary</i>	417
	<i>Further reading</i>	417
27	Geotechnical centrifuge modelling	418
27.1	<i>Modelling in engineering</i>	418
27.2	<i>Scaling laws and dimensional analysis</i>	418
27.3	<i>Scaling geotechnical models</i>	419
27.4	<i>Purposes of modelling</i>	422
27.5	<i>Geotechnical centrifuges</i>	423
27.6	<i>Control and instrumentation in centrifuge models</i>	424
27.7	<i>Summary</i>	425
	<i>Reference</i>	425
	<i>Further reading</i>	425
28	Concluding remarks	427
	<i>Author Index</i>	429
	<i>Subject Index</i>	431
