

Second Edition

An Introduction to

Atmospheric Thermodynamics

Anastasios A. Tsonis

CAMBRIDGE

CONTENTS

<i>Preface</i>	ix
1 Basic definitions	1
2 Some useful mathematical and physical topics	7
2.1 Exact differentials	7
2.2 Kinetic theory of heat	9
3 Early experiments and laws	13
3.1 The first law of Gay-Lussac	13
3.2 The second law of Gay-Lussac	14
3.3 Absolute temperature	15
3.4 Another form of the Gay-Lussac laws	15
3.5 Boyle's law	16
3.6 Avogadro's hypothesis	16
3.7 The ideal gas law	17
3.8 A little discussion on the ideal gas law	19
3.9 Mixture of gases – Dalton's law	20
Examples	21
Problems	25
4 The first law of thermodynamics	27
4.1 Work	27
4.2 Definition of energy	29
4.3 Equivalence between heat and work done	31
4.4 Thermal capacities	32
4.5 More on the relation between U and T (Joule's law)	34
4.6 Consequences of the first law	37
Examples	44
Problems	51

CONTENTS

5	The second law of thermodynamics	55
5.1	The Carnot cycle	55
5.2	Lessons learned from the Carnot cycle	58
5.3	More on entropy	63
5.4	Special forms of the second law	65
5.5	Combining the first and second laws	66
5.6	Some consequences of the second law	67
	Examples	72
	Problems	76
6	Water and its transformations	79
6.1	Thermodynamic properties of water	80
6.2	Equilibrium phase transformations – latent heat	83
6.3	The Clausius-Clapeyron (C-C) equation	85
6.4	Approximations and consequences of the C-C equation	87
	Examples	92
	Problems	96
7	Moist air	99
7.1	Measures and description of moist air	100
7.1.1	Humidity variables	100
7.1.2	Mean molecular weight of moist air and other quantities	102
7.2	Processes in the atmosphere	104
7.2.1	Isobaric cooling – dew and frost temperatures	104
7.2.2	Adiabatic isobaric processes – wet-bulb temperatures	109
7.2.3	Adiabatic expansion (or compression) of unsaturated moist air	112
7.2.4	Reaching saturation by adiabatic ascent	113
7.2.5	Saturated ascent	118
7.2.6	A few more temperatures	123
7.2.7	Saturated adiabatic lapse rate	126
7.3	Other processes of interest	128
7.3.1	Adiabatic isobaric mixing	128
7.3.2	Vertical mixing	130
7.3.3	Freezing inside a cloud	131
	Examples	133
	Problems	140
8	Vertical stability in the atmosphere	143
8.1	The equation of motion for a parcel	143
8.2	Stability analysis and conditions	145
8.3	Other factors affecting stability	152
	Examples	152
	Problems	155

9	Thermodynamic diagrams	159
9.1	Conditions for area-equivalent transformations	159
9.2	Examples of thermodynamic diagrams	161
9.2.1	The tephigram	161
9.2.2	The emagram	163
9.2.3	The skew emagram (skew $(T-\ln p)$ diagram)	165
9.3	Graphical representation of thermodynamic variables in a $T-\ln p$ diagram	167
9.3.1	Using diagrams in forecasting	168
	Example	170
	Problems	171
10	Beyond this book	175
10.1	Basic predictive equations in the atmosphere	175
10.2	Moisture	177
	<i>References</i>	179
	<i>Appendix</i>	181
	Table A.1	181
	Table A.2	182
	Table A.3	183
	Figure A.1	184
	<i>Index</i>	185
