D.J. O'Connor
B.A. Sexton
R.St.C. Smart (Eds.)

Surface Analysis Methods in Materials Science

Second Edition

Springer

Contents

Part I	Introduction	
---------------	---------------------	--

1	Solid Surfaces, Their Structure and Composition	
C. Klauber, R. St. C. Smart		3
1.1	Importance of the Surface	3
1.2	Solid Surfaces of Different Materials	7
1.2.1	A Material Under Attack: Aluminium	11
1.3	Methods of Surface Analysis	12
1.3.1	Variety of Surface Analytical Techniques	12
1.4	Structural Imaging	13
1.4.1	Direct Physical Imaging	13
1.4.2	Indirect Structural Imaging – Relaxation and Reconstruction	20
1.5	Composition of the Surface Selvedge	23
1.5.1	Electron Inelastic Mean Free Paths	24
1.5.2	Variation of Elemental Sensitivities	28
1.5.3	Practical Detection Limits	31
1.5.4	Practical Spatial Limits	32
1.5.5	Chemical State Information	37
1.5.6	Laboratory Standards	41
1.5.7	Inter-laboratory Errors	41
1.6	Defect and Reaction Sites at Surfaces	42
1.7	Electronic Structure at Surfaces	46
1.8	Structures of Adsorbed Layers	49
1.9	Structure in Depth Profiles Through Surfaces	51
1.10	Specific Structures	55
1.10.1	Grain Structures, Phase Distributions and Inclusions	55
1.10.2	Fracture Faces and Intergranular Regions	55
1.10.3	Pore Structures	57

1.10.4	Precipitates, Reaction Products and Recrystallised Particles on Surfaces	60
1.10.5	Magnetic Domains	60
1.11	Technique-Induced Artifacts	61
1.11.1	Radiation Damage	61
1.11.2	Electrostatic Charging	64
	References	65

2 UHV Basics

	C. Klauber	71
2.1	The Need for Ultrahigh Vacuum	71
2.2	Achieving UHV	74
2.3	Specimen Handling	76
2.4	Specimen Handling: ASTM Standards	78
	References	81

Part II Techniques

3 Electron Microscope Techniques for Surface Characterization

	P.S. Turner, C.E. Nockolds, S. Bulcock	85
3.1	What Do We Need to Know About Surface Structures?	86
3.2	Electron Optical Imaging Systems	87
3.2.1	Electron Sources	89
3.2.2	Electron Lenses	89
3.2.3	Detection Systems	90
3.3	Scanning Electron Microscopy of Surfaces	91
3.3.1	The SEM	91
3.3.2	The Signals and Detectors	92
3.3.3	Resolution and Contrast in SEM Images	93
3.3.4	Variable Pressure SEM and Environmental SEM	97
3.3.5	Energy Dispersive X-Ray Spectrometry	98
3.4	Transmission Electron Microscopy of Surfaces	99
3.4.1	The Transmission Electron Microscope	99
3.4.2	Electron Diffraction	101
3.4.3	Image Contrast and Resolution in the TEM	101
3.4.4	Imaging Surface Structures in the TEM	102
3.4.5	Reflection Electron Microscopy	103
3.5	Other Developments	103
	References	104

4 Sputter Depth Profiling

B.V. King	107
4.1 Analysis of a Sputter Depth Profile	108
4.1.1 Calibration of the Depth Scale	108
4.1.2 Calibration of the Concentration Scale	112
4.2 The Depth Resolution of Sputter Profiling	115
4.2.1 Specification of the Depth Resolution	115
4.2.2 Instrumental Factors Determining the Depth Resolution ..	117
4.2.3 Surface Effects Determining the Depth Resolution	119
4.2.4 Bulk Effects Affecting the Depth Resolution	120
4.2.5 Minimisation of the Depth Resolution	121
4.3 Conclusion	123
References	123

5 SIMS – Secondary Ion Mass Spectrometry

R.J. MacDonald, B.V. King	127
5.1 The Practice of SIMS	128
5.1.1 Overview	128
5.1.2 Advantages and Disadvantages of SIMS	130
5.1.3 The Yield of Secondary Ions	131
5.2 Construction of a Secondary Ion Mass Spectrometer	138
5.3 Topics in SIMS Analysis	145
5.3.1 Signal Enhancement by Surface Adsorption	145
5.3.2 Using Secondary Ion Energies in SIMS Analysis	147
5.3.3 The Relative Sensitivity Factor	149
5.4 Static SIMS Analysis	150
References	153

6 Auger Electron Spectroscopy and Microscopy – Techniques and Applications

P.C. Dastoor	155
6.1 Introduction	155
6.2 Fundamentals	155
6.3 Instrumentation	158
6.4 Quantification	159
6.5 Techniques	160
6.5.1 Spot Analysis Mode	161
6.5.2 Line Scan Mode	162
6.5.3 Scanning Mode	163
6.5.4 Scanning Auger Microscopy	164
6.5.5 Depth Profiling Mode	167
6.5.6 Preferential Sputtering	167
6.5.7 Attenuation Length	168

6.5.8	Chemical Effects	168
6.6	Applications	169
6.6.1	Thin Film Analysis	169
6.6.2	Surface Diffusion and Segregation	170
6.7	Future	171
	References	171

7 X-Ray Photoelectron Spectroscopy

M.H. Kibel	175
7.1 Basic Principles	175
7.1.1 Theory	175
7.1.2 Typical Spectrum	176
7.1.3 Surface Specificity	178
7.2 Instrumentation	179
7.2.1 Essential Components	179
7.2.2 Optional Components	182
7.2.3 Synchrotron Radiation	183
7.2.4 Imaging XPS	183
7.3 Spectral Information	184
7.3.1 Spin-Orbit Splitting	184
7.3.2 Chemical Shifts	185
7.3.3 Auger Chemical Shifts in XPS	186
7.3.4 X-Ray Line Satellites	187
7.3.5 “Shake-up” Lines	187
7.3.6 Ghost Lines	188
7.3.7 Plasmon Loss Lines	189
7.4 Quantitative Analysis	189
7.5 Experimental Techniques	191
7.5.1 Variation of X-Ray Sources	191
7.5.2 Depth Profiles	191
7.5.3 Angular Variations	194
7.5.4 Sample Charging	194
7.6 Comparison with Other Techniques	195
7.7 Applications	197
7.8 Conclusion	197
References	198

8 Vibrational Spectroscopy of Surfaces

R.L. Frost, N.K. Roberts	203
8.1 Introduction	203
8.2 Surface Techniques	206
8.2.1 Diffuse Reflectance Infrared Fourier Transform (DRIFT)	207
8.2.2 Attenuated Total Reflectance Spectroscopy (ATR)	209
8.2.3 Photoacoustic Spectroscopy (PAS)	216

8.2.4 Infrared Emission Spectroscopy (IES).....	219
8.3 Fourier transform Raman spectroscopy.....	221
8.4 Raman Microscopy.....	224
References.....	227

9 Rutherford Backscattering Spectrometry and Nuclear Reaction Analysis

S.H. Sie.....	229
9.1 Introduction.....	229
9.2 Principles.....	231
9.2.1 Stopping Power.....	232
9.2.2 Straggling.....	233
9.3 Rutherford Backscattering Spectrometry.....	234
9.3.1 Experimental Considerations.....	236
9.3.2 Examples.....	236
9.3.3 Special Cases.....	238
9.4 Nuclear Reaction Analysis.....	240
9.4.1 Formalism.....	241
9.4.2 Experimental Considerations.....	242
9.4.3 Examples.....	243
9.5 Summary.....	245
References.....	246

10 Materials Characterization by Scanned Probe Analysis

S. Myhra.....	247
10.1 Introduction.....	247
10.2 The Surface Analytical Context.....	251
10.3 Generic SPM Systems.....	251
10.4 Physical Principles.....	253
10.4.1 STM/STS.....	253
10.4.2 Scanning Force Microscopy (SFM).....	256
10.4.3 Intermittent Contact Mode.....	257
10.4.4 F-d Analysis.....	258
10.4.5 Lateral Force Microscopy (LFM).....	260
10.5 Procedures for 'Best Practice'.....	262
10.5.1 Spatial Characteristics of Scanners.....	263
10.5.2 Determination of c_N and c_T	264
10.5.3 Determination of Spring Constants.....	265
10.5.4 Determination of Actual Tip Parameters in the Mesoscopic Regime.....	266
10.6 Illustrative Case Studies.....	267
10.6.1 Surface and Defect Structures of WTe_2 Investigated by UHV-STM.....	267

10.6.2 Organic Thin Film and Surface Mechanical Characterization	269
10.6.3 AFM Analysis of 'Soft' Biological Materials	273
10.6.4 Nanotribology of Solid Lubricants	278
References	283
11 Low Energy Ion Scattering	
D. J. O'Connor	287
11.1 Qualitative Surface Analysis	287
11.2 Advantage of Recoil Detection	289
11.3 Quantitative Analysis	291
11.3.1 Scattered Ion Yield	291
11.3.2 Differential Scattering Cross Section	291
11.3.3 Charge Exchange	292
11.3.4 Relative Measurements	295
11.3.5 Standards	297
11.4 Surface Structural Analysis	299
11.4.1 Multiple Scattering	299
11.4.2 Impact Collision Ion Surface Scattering (ICISS)	300
11.5 Experimental Apparatus	302
References	304
12 Reflection High Energy Electron Diffraction	
G.L. Price	307
12.1 Theory	309
12.2 Applications	312
References	318
13 Low Energy Electron Diffraction	
P. J. Jennings, C.Q. Sun	319
13.1 The Development of LEED	319
13.2 The LEED Experiment	320
13.2.1 Sample Preparation	323
13.2.2 Data Collection	323
13.3 Diffraction from a Surface	324
13.3.1 Bragg Peaks in LEED Spectra	325
13.4 LEED Intensity Analysis	326
13.5 LEED Fine Structure	328
13.6 Applications of LEED	329
13.6.1 Determination of the Symmetry and Size of the Unit Mesh	329
13.6.2 Unit Meshes for Chemisorbed Systems	330
13.6.3 LEED Intensity Analysis	330
13.6.4 Surface Barrier Analysis	332

13.7 Conclusion	333
References	334
14 Ultraviolet Photoelectron Spectroscopy of Solids	
R. Leckey	337
14.1 Experimental Considerations	339
14.2 Angle Resolved UPS	340
14.3 Fermi Surface Studies	344
References	345
15 EXAFS	
R.F. Garrett, G.J. Foran	347
15.1 Introduction	347
15.2 Experimental Details	348
15.2.1 Synchrotron Radiation	350
15.2.2 Synchrotron Beamlines for EXAFS	352
15.2.3 Detectors	354
15.2.4 The Sample	355
15.2.5 Acquiring EXAFS Data	357
15.3 Theory of X-ray Absorption	359
15.3.1 EXAFS	359
15.3.2 XANES	361
15.4 EXAFS Analysis	362
15.4.1 Data Reduction	362
15.4.2 Conversion to k -space	363
15.4.3 Background Subtraction	363
15.4.4 Fourier Transformation	364
15.4.5 Fourier Filtering and Back Transformation	364
15.4.6 Modelling and Least Squares Fitting to the EXAFS Equation	365
15.5 Case Studies	366
15.5.1 Surface EXAFS of Titanium Nanostructure Thin Films ...	366
15.5.2 Ion-Implantation Induced Amorphisation of Germanium ..	370
References	371

Part III Processes and Applications

16 Minerals, Ceramics and Glasses

R.St.C. Smart	377
16.1 Minerals	380
16.1.1 Iron Oxides in Mineral Mixtures	380
16.1.2 Surface Layers on Minerals	381
16.1.3 Mineral Processing of Sulfide Ores	381
16.1.4 Adsorption and Reaction of Oxide and Clay Minerals	386
16.1.5 Surface Modification of Minerals	387
16.2 Ceramics	389
16.2.1 Leaching and Dissolution	390
16.2.2 Ceramic Surface Layers: Bioceramics	392
16.3 Glasses	395
16.3.1 Leached and Recrystallised surfaces	395
16.3.2 Surface Modification of Glass Surfaces	398
References	400

17 Characterization of Catalysts by Surface Analysis

N.K. Singh, B.G. Baker	405
17.1 Examples of Catalytic Systems Studied by XPS	408
17.1.1 Alumina	408
17.1.2 Tungsten Oxide Catalysts	409
17.1.3 Palladium on Magnesia	412
17.1.4 Cobalt on Kieselguhr Catalysts	414
17.1.5 Iron Catalysts	416
17.2 Examples of Catalytic Systems Studied by FT-Infrared Spectroscopy	420
17.2.1 ZSM-5 Zeolites	420
17.2.2 Thin Alumina Films	426
17.2.3 Rhodium Supported Alumina Films	428
17.2.4 Copper Supported Silica Films	429
17.3 Conclusion	432
References	432

18 Application to Semiconductor Devices

P.W. Leech, P. Ressel	435
18.1 Micro and Nano-Analysis of Integrated Circuits	436
18.2 Analytical Techniques in the Characterisation of Ohmic Metal/Semiconductor Contacts	443
18.3 Summary	452
References	452

19 Characterisation of Oxidised Surfaces

J.L. Cocking, G.R. Johnston	455
19.1 The Oxidation Problem	456
19.2 Oxidation of Co-22Cr-11Al	457
19.2.1 Chemical Characterisation	458
19.2.2 Scanning Auger Microscopy	458
19.2.3 Rutherford Backscattering Analysis	459
19.3 Oxidation of Ni-18Cr-6Al-0.5Y	464
19.3.1 Extended X-Ray Absorption Fine Structure	466
References	471

20 Coated Steel

R. Payling	473
20.1 Applications	474
20.1.1 Grain Boundaries in Steel	474
20.1.2 Steel Surface	475
20.1.3 Alloy Region	478
20.1.4 Metallic Coatings	478
20.1.5 Treated Metallic Coating Surface	483
20.1.6 Metal-Polymer Interface	483
20.1.7 Polymer Surface	484
20.2 Conclusion	486
References	486

21 Thin Film Analysis

G.C. Morris	489
21.1 Thin Film Photovoltaics	490
21.1.1 Use for Solar Electricity	490
21.1.2 The Thin Film Solar Cell: Glass/ITO/ n CdS/ p CdTe/Au ..	491
21.2 Film Purity	492
21.2.1 Low Level Impurities – Qualitative	492
21.2.2 Low Level Impurities – Quantitative	494
21.2.3 Doping Profiles in Thin Films	495
21.3 Composition and Thickness of Layered Films	496
21.3.1 Composition Gradation in Films, e.g. $\text{Cd}_x\text{Hg}_{1-x}\text{Te}$ Films on Platinum	496
21.3.2 Thin Overlayers on Films	497
21.4 Beam Effects in Thin Film Analysis	501
21.5 Conclusion	502
References	502

22 Identification of Adsorbed Species

B.G. Baker	505
22.1 Examples of Adsorption Studies	505
22.1.1 Nitric Oxide Adsorption on Metals	505
22.1.2 Aurocyanide Adsorption on Carbon	511
22.1.3 Adsorbed Methoxy on Copper and Platinum	514
22.2 Conclusion	518
References	518

23 Surface Analysis of Polymers

H.A.W. StJohn, T.R. Gengenbach, P.G. Hartley, H.J. Griesser	519
23.1 Specific Properties of Polymers	520
23.2 Surface Contamination and Additives	525
23.3 Contact Angle Measurements	529
23.4 X-Ray Photoelectron Spectroscopy (XPS)	529
23.4.1 General Aspects	529
23.4.2 Angle-Resolved XPS	531
23.4.3 Inelastic Mean Free Path in Polymers	532
23.4.4 Cold Stage XPS	533
23.4.5 Derivatization of Chemical Groups	534
23.5 Secondary Ion Mass Spectrometry (SIMS)	537
23.6 Scanning Probe Microscopy Methods: Scanning Tunneling Microscopy (STM) and Atomic Force Microscopy (AFM)	540
23.7 Specimen Damage	543
23.8 Charge Correction	547
23.9 Grazing Angle Infrared Spectroscopy	548
References	549

24 Glow Discharge Optical Emission Spectrometry

T. Nelis, R. Payling	553
24.1 Instrument	553
24.2 Theory	555
24.3 Applications	556
24.3.1 Near Surface	556
24.3.2 Coatings	556
24.3.3 Semiconductor Processing	557
References	559

Part IV Appendix

Acronyms Used in Surface and Thin Film Analysis	563
Surface Science Bibliography	569
Index	577
