Markov Processes, Gaussian Processes, and Local Times

MICHAEL B. MARCUS
JAY ROSEN

Contents

1	**Introduction**		*page* 1
	1.1	Preliminaries	6
2	**Brownian motion and Ray–Knight Theorems**		11
	2.1	Brownian motion	11
	2.2	The Markov property	19
	2.3	Standard augmentation	28
	2.4	Brownian local time	31
	2.5	Terminal times	42
	2.6	The First Ray–Knight Theorem	48
	2.7	The Second Ray–Knight Theorem	53
	2.8	Ray's Theorem	56
	2.9	Applications of the Ray–Knight Theorems	58
	2.10	Notes and references	61
3	**Markov processes and local times**		62
	3.1	The Markov property	62
	3.2	The strong Markov property	67
	3.3	Strongly symmetric Borel right processes	73
	3.4	Continuous potential densities	78
	3.5	Killing a process at an exponential time	81
	3.6	Local times	83
	3.7	Jointly continuous local times	98
	3.8	Calculating u_{T_0} and $u_{\tau(\lambda)}$	105
	3.9	The h-transform	109
	3.10	Moment generating functions of local times	115
	3.11	Notes and references	119
4	**Constructing Markov processes**		121
	4.1	Feller processes	121
	4.2	Lévy processes	135

	4.3	Diffusions	144
	4.4	Left limits and quasi left continuity	147
	4.5	Killing at a terminal time	152
	4.6	Continuous local times and potential densities	162
	4.7	Constructing Ray semigroups and Ray processes	164
	4.8	Local Borel right processes	178
	4.9	Supermedian functions	182
	4.10	Extension Theorem	184
	4.11	Notes and references	188
5	**Basic properties of Gaussian processes**		189
	5.1	Definitions and some simple properties	189
	5.2	Moment generating functions	198
	5.3	Zero–one laws and the oscillation function	203
	5.4	Concentration inequalities	214
	5.5	Comparison theorems	227
	5.6	Processes with stationary increments	235
	5.7	Notes and references	240
6	**Continuity and boundedness of Gaussian processes**		243
	6.1	Sufficient conditions in terms of metric entropy	244
	6.2	Necessary conditions in terms of metric entropy	250
	6.3	Conditions in terms of majorizing measures	255
	6.4	Simple criteria for continuity	270
	6.5	Notes and references	280
7	**Moduli of continuity for Gaussian processes**		282
	7.1	General results	282
	7.2	Processes on R^n	297
	7.3	Processes with spectral densities	317
	7.4	Local moduli of associated processes	324
	7.5	Gaussian lacunary series	336
	7.6	Exact moduli of continuity	347
	7.7	Squares of Gaussian processes	356
	7.8	Notes and references	361
8	**Isomorphism Theorems**		362
	8.1	Isomorphism theorems of Eisenbaum and Dynkin	362
	8.2	The Generalized Second Ray–Knight Theorem	370
	8.3	Combinatorial proofs	380
	8.4	Additional proofs	390
	8.5	Notes and references	394

9 Sample path properties of local times 396
9.1 Bounded discontinuities 396
9.2 A necessary condition for unboundedness 403
9.3 Sufficient conditions for continuity 406
9.4 Continuity and boundedness of local times 410
9.5 Moduli of continuity 417
9.6 Stable mixtures 437
9.7 Local times for certain Markov chains 441
9.8 Rate of growth of unbounded local times 447
9.9 Notes and references 454

10 p-variation 456
10.1 Quadratic variation of Brownian motion 456
10.2 p-variation of Gaussian processes 457
10.3 Additional variational results for Gaussian processes 467
10.4 p-variation of local times 479
10.5 Additional variational results for local times 482
10.6 Notes and references 495

11 Most visited sites of symmetric stable processes 497
11.1 Preliminaries 497
11.2 Most visited sites of Brownian motion 504
11.3 Reproducing kernel Hilbert spaces 511
11.4 The Cameron–Martin Formula 516
11.5 Fractional Brownian motion 519
11.6 Most visited sites of symmetric stable processes 523
11.7 Notes and references 526

12 Local times of diffusions 530
12.1 Ray's Theorem for diffusions 530
12.2 Eisenbaum's version of Ray's Theorem 534
12.3 Ray's original theorem 537
12.4 Markov property of local times of diffusions 543
12.5 Local limit laws for h-transforms of diffusions 549
12.6 Notes and references 550

13 Associated Gaussian processes 551
13.1 Associated Gaussian processes 552
13.2 Infinitely divisible squares 560
13.3 Infinitely divisible squares and associated processes 570
13.4 Additional results about M-matrices 578
13.5 Notes and references 579

14 Appendix 580
14.1 Kolmogorov's Theorem for path continuity 580
14.2 Bessel processes 581
14.3 Analytic sets and the Projection Theorem 583
14.4 Hille–Yosida Theorem 587
14.5 Stone–Weierstrass Theorems 589
14.6 Independent random variables 590
14.7 Regularly varying functions 594
14.8 Some useful inequalities 596
14.9 Some linear algebra 598
