

# **MECHANICAL CONVEYORS**

Selection and  
Operation

**Muhammad E. Fayed**  
**Thomas S. Skocir**

## TABLE OF CONTENTS

---

*Foreword*      *xi*

*Preface*      *xv*

*Acknowledgements*      *xvii*

### **Chapter 1. Introduction . . . . . 1**

- 1.0 General Comments      1
- 1.1 Conveying and Material Handling      3
- 1.2 The Material Handling Problem      4
- 1.3 Equipment Specifications      6
- 1.4 Standardizing      6
- 1.5 Sources of Additional Information      7
- 1.6 Bibliography      7

### **Chapter 2. Material Characterization and Analysis . . . . . 9**

- 2.0 General Comments      9
- 2.1 Representative Sample      10
- 2.2 Sample Analysis      10
- 2.3 Physical Properties and Tests      10
- 2.4 Qualitative Properties      28
- 2.5 Material Classification Coding      34
- 2.6 Bibliography      34

### **Chapter 3. Belt Conveyors . . . . . 37**

- 3.0 Introduction      37
- 3.1 Layout      38

|                                               |                                             |            |
|-----------------------------------------------|---------------------------------------------|------------|
| 3.2                                           | Basic Configuration                         | 40         |
| 3.3                                           | Important Material Characteristics          | 42         |
| 3.4                                           | Material Properties Affecting Conveyability | 42         |
| 3.5                                           | Components of a Standard Belt Conveyor      | 45         |
| 3.6                                           | Design                                      | 103        |
| 3.7                                           | Belt Training                               | 128        |
| 3.8                                           | Belt Feeders                                | 131        |
| 3.9                                           | Belt Scales                                 | 131        |
| 3.10                                          | Specialty Systems                           | 133        |
| 3.11                                          | Bibliography                                | 164        |
| <b>Chapter 4. Screw Conveyors and Feeders</b> |                                             | <b>167</b> |
| 4.0                                           | Introduction                                | 167        |
| 4.1                                           | Basic Configuration                         | 169        |
| 4.2                                           | Material Classifications                    | 171        |
| 4.3                                           | Material Properties Affecting Conveyability | 171        |
| 4.4                                           | Components of a Screw Conveyor              | 174        |
| 4.5                                           | Hardfacing and Wear Resistance              | 194        |
| 4.6                                           | Conveyor Design                             | 195        |
| 4.7                                           | Inclined Conveying                          | 204        |
| 4.8                                           | Feeders                                     | 207        |
| 4.9                                           | Flexible Screw Conveyors                    | 215        |
| 4.10                                          | Screw Unloaders and Loaders                 | 220        |
| 4.11                                          | Bibliography                                | 223        |
| <b>Chapter 5. Vibratory Conveyors</b>         |                                             | <b>225</b> |
| 5.0                                           | Introduction                                | 225        |
| 5.1                                           | Basic Configuration                         | 226        |
| 5.2                                           | Vibratory Feeders versus Conveyors          | 226        |
| 5.3                                           | Material Processing                         | 228        |
| 5.4                                           | Material Properties Affecting Conveyability | 229        |
| 5.5                                           | Components of a Vibratory Conveyor          | 232        |
| 5.6                                           | Modes of Operation                          | 252        |
| 5.7                                           | Capacity                                    | 263        |
| 5.8                                           | Spiral Elevators                            | 264        |
| 5.9                                           | Reciprocating Slat Conveyors                | 265        |
| 5.10                                          | Bibliography                                | 269        |
| <b>Chapter 6. Chain-Type Conveyors</b>        |                                             | <b>271</b> |
| 6.0                                           | Introduction                                | 271        |
| 6.1                                           | Basic Configuration                         | 272        |
| 6.2                                           | Material Properties Affecting Conveyability | 274        |

|      |                                |     |
|------|--------------------------------|-----|
| 6.3  | Components of a Chain Conveyor | 275 |
| 6.4  | Conveyor Design                | 289 |
| 6.5  | Apron Conveyors                | 295 |
| 6.6  | Drag Conveyors                 | 301 |
| 6.7  | Plain Chain Conveyors          | 303 |
| 6.8  | Scraper and Flight Conveyors   | 304 |
| 6.9  | En-Masse Conveyors             | 308 |
| 6.10 | Tubular Drag Conveyor          | 317 |
| 6.11 | Aero-Mechanical Conveyors      | 321 |
| 6.12 | Serpentix®                     | 324 |
| 6.13 | Bibliography                   | 328 |

## **Chapter 7. Bucket Elevators and Bucket Carriers ..... 329**

|     |                                             |     |
|-----|---------------------------------------------|-----|
| 7.0 | Introduction                                | 329 |
| 7.1 | Basic Configuration                         | 329 |
| 7.2 | Material Properties Affecting Conveyability | 330 |
| 7.3 | Types of Bucket Elevators                   | 332 |
| 7.4 | Components of a Bucket Elevator             | 342 |
| 7.5 | Design                                      | 360 |
| 7.6 | Conveying High-Temperature Materials        | 362 |
| 7.7 | Bucket Carriers                             | 362 |
| 7.8 | Bibliography                                | 378 |

## **Chapter 8. Motors and Drives ..... 379**

|     |                                        |     |
|-----|----------------------------------------|-----|
| 8.0 | Introduction                           | 379 |
| 8.1 | Motors                                 | 380 |
| 8.2 | Speed Reduction                        | 399 |
| 8.3 | Adjustable Speed Drives                | 410 |
| 8.4 | Soft Starting                          | 435 |
| 8.5 | Flexible Couplings and Shaft Alignment | 445 |
| 8.6 | Bibliography                           | 451 |

|             |                       |     |
|-------------|-----------------------|-----|
| Appendix A: | Units and Conversions | 453 |
|-------------|-----------------------|-----|

|             |                               |     |
|-------------|-------------------------------|-----|
| Appendix B: | Organizations and Periodicals | 456 |
|-------------|-------------------------------|-----|

|             |                                   |     |
|-------------|-----------------------------------|-----|
| Appendix C: | Motor Terminology and Definitions | 459 |
|-------------|-----------------------------------|-----|

|             |                          |     |
|-------------|--------------------------|-----|
| Appendix D: | Material Characteristics | 461 |
|-------------|--------------------------|-----|

|       |     |
