Preface xiii

Acknowledgements xv

Glossary xvii

1 Organizing information: what it means 1

Introduction 1

Information services in today's world 1

Organization of information: what and why? 3

Classification 6

Cataloguing 8

Library approaches to organizing information 9

Summary 14

Review questions 15

References 15

2 Information organization in non-library environments 17

Introduction 17

Organization of electronic information 17

The online database approach 18

The DBMS approach 20

The expert systems approach 22

Organization of information on the internet 23

New approaches to organizing information on intranets
and the web 24

The semantic web 25

Summary 26

Review questions 26

References 27

3 Cataloguing 29

- Introduction 29
- A brief history of library catalogues 29
- What is a library catalogue? 30
- AACR2 32
- The process of cataloguing 32
- Subject access to catalogues 34
- Implications of basic cataloguing rules for OPACs 34
- Cataloguing of internet resources 37
- FRBR (Functional Requirements of Bibliographic Records) 38
- Entities and their relationships 40
- Importance of the FRBR model 42
- RDA: Resource Description and Access 42
- Summary 44
- Review questions 45
- References 45

4 Bibliographic formats: MARC 21 and others 47

- Introduction 47
- Bibliographic formats 47
- ISO 2709: Format for Bibliographic Information Interchange 49
- MARC format 53
- MARC 21 54
- UNIMARC format 60
- CCF 66
- Summary 68
- Review questions 69
- References 69

5 Library classification 71

- Introduction 71
- Library classification: what and why? 71
- Classification schemes 72
- Types of bibliographic classification schemes 75
- Major library classification schemes 78
- Classification of electronic resources 105
- Summary 108

Review questions 109
References 109

6 Subject heading lists and thesauri in information organization 111

Introduction 111
Vocabulary control tools 111
Subject heading lists and thesauri 112
Subject heading lists and thesauri in the organization
of internet resources 122
Summary 126
Review questions 128
References 128

7 Organization of internet information resources 131

Introduction 131
Characteristics of the web 131
Metadata: why not bibliographic formats? 133
Bibliographic classification schemes: are they suitable for
organizing the web? 134
Subject heading lists: can they be used for indexing
internet resources? 135
New tools and standards for managing internet
information 136
The semantic web 136
Summary 137
Review questions 137
References 137

8 Metadata 139

Introduction 139
Metadata: what? 139
Metadata: why? 141
Metadata: types 142
Metadata standards 144
Metadata management 151
Summary 152

Review questions 153

References 153

9 Markup languages 157

Introduction 157

SGML 157

HTML 159

XML 161

Summary 168

Review questions 168

References 168

10 Ontology 171

Introduction 171

Ontology: origin and meaning 172

Ontology, taxonomy and thesauri 173

Some common examples of ontology 175

Ontologies: what do they do? 176

Building an ontology: guidelines and methods 176

Tools for building an ontology 178

Ontology languages: DAML+OIL and OWL 179

Ontology: role in information organization and
management 182

Summary 183

Review questions 184

References 184

11 Information architecture 187

Introduction 187

What is IA? 187

Why do we need an IA? 188

What does IA involve? 189

How does one build an IA? 190

Building an IA: approaches and stages 191

Outcome of an IA exercise 193

Summary 194

Review questions 194

References 195

12 The semantic web 197

Introduction 197

What is the semantic web? 198

How does the semantic web differ from the conventional web? 199

Semantic web technologies 200

URI 201

RDF 202

Semantic web applications 206

Semantic web and information access 207

Summary 210

Review questions 210

References 210

13 Information organization: issues and trends 213

Introduction 213

Cataloguing: FRBR and semantic catalogue networks 214

Metadata 215

Classification in the digital age 217

Ontologies 218

Semantic portals and ontologies 219

Semantic web technologies and digital libraries 220

User-driven classification of web resources 220

Conclusion 221

References 222
