FOREWORD	xix
PREFACE	xxi
PART I SYSTEMS: ADVANCES IN SYSTEMS SCIENCE AND THINKING	1
1 SYSTEMS PHILOSOPHY	3
Emerging Systems Movement	3
The Nature of Systems	5
Causality and Teleology	6
Emergence	7
Life and the Second Law	7
Entropy and Work in Human Organizations	8
Entropy Cycling	9
General Systems Theory and Open Systems	9
Boulding's Classification of Systems	9
Parallels and Isomorphisms	10
The Concept of the Open System	11
Understanding Open System Behavior	12
Gestalt and Holism	13
Indivisibility	14
Interaction dynamics	14
Stability and Steady-state	15
The Systems Approach	16
Systems Thinking	17
Functionalism and the Organismic Analogy	18
The organismic analogy	18
The machine metaphor	19
Mechanistic Control Concepts	19
Organismic Control Concepts	20
Basic Percepts, Concepts and Precepts	21
Emergence and hierarchy	21
Systems as comprised of interacting parts, themselves systems	22
Variety in whole systems	22

Potential synthesis of open systems with desired emergent properties: systems engineering	23
Problem space and solution space	24
Evolving adaptive systems	25
Self-organized criticality	26
Weak chaos	27
System precepts	27
Assignment	29
2 ADVANCES IN SYSTEMS SCIENCE	31
System Theory, System Science	31
Conservation Laws and Transport Phenomena	32
Queuing Phenomena	33
Chaotic Phenomena	35
Lepidoptera Lorenzii?	35
Generating chaos	35
Self-similarity	39
Fractals	39
Period doubling	41
Information: Conserved, or Non-conserved?	42
Systems Science as Natural Science and Social Science	43
Behavior	43
Interpretation and categorization	44
Tacit knowledge	44
World models and world views	44
Interpretation	45
Belief system	45
Instinct and archetype	46
Social and Cultural Anthropology	49
Social Capital	50
Social Genotype	50
Managing Complexity	51
Aggregation of emergent properties	52
Anti-chaos	53
Systems Life Cycles and Entropic Cycling	54
Principle of system reactions	54
Principle of system cohesion	55
Principle of adaptation	55
Principle of connected variety	56
Principle of limited variety	56
Principle of preferred patterns	57
Principle of cyclic progression (entropic cycling)	57
System life cycles: the Unified Systems Hypothesis	58
System longevity: system decay	60
Summary	61
Assignment	62
3 ADVANCES IN SYSTEMS THINKING	63
Scope, Limits and Values	63
Rich pictures	64
Causality and causal loop models	65

Dynamic simulation of phenomena	68
Dynamic interactive systems simulation	71
Behavior modeling	72
Systems Thinking and the Scientific Method	73
Representing and Modeling Systems	74
Nonlinear Systems Thinking	78
Summary	80
Assignments	81
4 SYSTEMS ENGINEERING PHILOSOPHY	83
Why Systems Engineering is Important	83
Early Examples Set the Style	84
Battle of Britain	84
NASA's Apollo	85
Is it 'Systems'?	86
Is it Engineering?	86
Problem Solving, Resolving and Dissolving	87
Systems Engineering: Definitions and Descriptions	88
The Real Objectives of Systems Engineering	91
Strategies for Solving, Resolving or Dissolving the Problem	92
Self-organizing Systems	94
System of Systems	94
Bottom-up Integration	96
Completing the 'Whole' of Systems Engineering . . .	97
Summary	99
Assignments	101
5 SYSTEM MODELS	103
The Open System	103
Simple Nesting and Recursive Models	105
Social Genotype — a Notional Model	106
Cybernetic Models	107
Models of Systems Architecture	108
Beers' Viable Systems Model	110
Open-loop Control Models	112
The 5-layer Systems Model	113
Layer 1: product/subsystem engineering	114
Layer 2: project systems engineering	117
The essence of systems engineering	120
Layer 4: industrial systems engineering	121
Layer 5: Socio-economic systems engineering	122
In Pursuit of Emergence — the Generic Reference Model of any System	124
Whence emergence? Can we purposefully 'design-in' emergence?	124
The generic reference model (GRM) concept	125
Function management	128
Behavior management	130
The generic reference form model	132
The Generic Reference Model in List Form	133

The GRM and the Systems Approach	135
Instantiated layered GRM	138
Does the GRM capture emergence?	141
Comparing the GRM	141
Summary	142
Assignment	142
CASE A: JAPANESE LEAN VOLUME SUPPLY SYSTEMS	145
Introduction	145
Investigation	148
The open system viewpoint	149
Market pull vs production push	152
Kaizen and the assembly line	154
Keiretsu	157
Summary	158
PART II SYSTEMS METHODOLOGY	161
6 OVERVIEW OF THE SYSTEMS METHODOLOGY	163
What is the Systems Methodology?	163
The Social and Economic Potential of the Systems Methodology	164
Systems Methodology — a Paradigm	165
Aspects of the Systems Methodology	165
The scientific dimension	165
The logic and epistemological dimensions	166
The time dimension	167
The cultural/political/behavioral dimensions	168
The moral and ethical dimensions	168
The social dimension	168
The organizational dimension	169
The economic dimension	169
The technological dimension	171
Systems Methodology: Conceptual Model	172
Create a (Better) Systems Methodology?	178
Create an Intelligent, Auto-adaptive, Evolving Solution System?	179
Auto-adaptation and the intelligent enterprise	180
Summary	181
Assignment	182
7 SM1: ADDRESSING COMPLEX ISSUES AND PROBLEMS	185
Problem-solving Paradigms	185
Linear, Complex, Nonlinear and Intelligent System Behavior	186
System Dysfunctions: the POETIC Acronym	186
Soft Systems Approaches	187
Degrees of intervention	188
Consensual Methods	189

Brainstorming	190
Nominal group technique (NGT)	190
Idea writing	190
Warfield's interpretive structural modeling (ISM)	191
Checkland's Soft Systems Methodology (SSM) in Intervention	192
Hitchins' Rigorous Soft Method (RSM) in Intervention	195
Summary	200
Assignment	200
CASE B: THE PRACTICE INTERVENTION	201
Situation	201
Off-line Informal Investigation using the Rigorous Soft Method (RSM)	202
Hands-on Intervention — using NGT and ISM	208
Comparing the Hands-off RSM Investigation and the Hands-on Intervention	216
Summary	217
8 SM2: EXPLORING THE SOLUTION SPACE	219
Introduction	219
Approach	219
Boundaries and finite states	220
Environments, influences and interactions	221
Structure and dynamics	222
Resource needs	222
Summary	223
Assignment	224
9 SM3 AND 4: FOCUSING SOLUTION SYSTEM PURPOSE	225
SM3: Solution System Purpose	225
Threats and strategies	226
SM4: Developing a Concept of Operations (CONOPS)	228
Assignments	230
CASE C: THE TOTAL WEAPON SYSTEM CONCEPT	231
<i>C (1): The Battle of Britain Command and Control System</i>	231
Introduction	231
Interacting Systems	233
Working up the System — Operational Systems Engineering	234
Let Battle Commence	235
AVM Keith Parks' tactics	238
Battle of Britain Simulation	238
Running the BoB simulation	239
<i>C (2): The Lightning — Realizing the Total Weapon Systems Concept</i>	244
Introduction	244
The Lightning	245
Optimizing the Design	247

The Jamming Problem	249
Digital Data Links to the Rescue	249
The trial	250
Conclusions	251
10 SM5: ARCHITECTING/DESIGNING SYSTEM SOLUTIONS	253
Approach	253
The Functional Design Process	255
The Physical Design Process	258
Output/outcome	261
Summary	262
Assignment	263
11 SM6: OPTIMIZE SOLUTION SYSTEM DESIGN	265
Approach	265
Methods, Tools and Techniques	266
Cost and capability	266
Optimizing the whole	266
Disaster relief example	268
The naval destroyer example	269
Optimizing supply and logistic systems designs	272
Understanding the Design in Context	273
To be Linear or Nonlinear: That is the Question	274
Verification and Validation	275
Summary	276
Assignment	277
12 SM7: CREATE AND PROVE SOLUTION SYSTEM (SOS)	279
Introduction	279
Requirement Specifications	280
Manifesting Different 'Kinds' of System	281
Organizational considerations	283
Integration considerations	283
Operational systems engineering — continual optimization in operation	285
Component of the Whole SoS	285
Summary	287
Assignments	288
13 THE SYSTEMS METHODOLOGY — ELABORATED	289
Ideal World vs Real World	289
The Systems Methodology — as Products	290
The Systems Methodology as a Whole	290
The Systems Methodology — as Process?	291
Outer loop — inner loop design	293
Outer loop, inner loop and systems engineering	294

The Systems Methodology — in Parts and Phases	294
Summary	298
Assignment	299

14 SETTING THE SYSTEMS METHODOLOGY TO WORK 301

Systems Methodology in Phases	301
Systems Methodology as HASs	302
Systems Methodology as Tools	303
Organization for Applying the Systems Methodology and for Systems Engineering	304
SM GANTT charts	306
Teams of teams	307
Team of teams and inner/outer loops	308
Team of teams and system of systems	309
Summary	311
Assignments	311

CASE D: ARCHITECTING A DEFENSE CAPABILITY 313

Note	313
SM1: Explore Problem Space	313
Mojave Maneuvers	313
The 'Real' issue?	319
SM2: Explore Solution Space	320
SM3: Focus SoS Purpose	321
Prime directive and semantic analysis	321
Measures of effectiveness (MOEs)	322
Strategies to achieve objectives, overcome threats	322
Nonlethal weapons	323
Functions from strategies	324
SM4: Develop SoS High-level CONOPS	325
SM5: Part 1. Design Solution System — Functional Design	327
SM5/3 instantiate internal functions	327
SM5/2 instantiate internal behavior	328
SM5/4 assemble SoS internal functions — minimize configuration entropy	329
SM5/5 partition into solution system interacting subsystems	329
SM5/6: Develop SoS internal architecture	330
SM5/7: Formulate Solution System Overview	330
SM5: Part 2. Design Solution System — Functional/Physical Design	332
Intermediate task!	332
SM5/11 Identifying an Option	333
Transportable land element (TLE) design concept	335
UMA/RPVs and weapons	337
Swarming and formation control	339
The chameleon TLE — internal design concept	339
The VSTOL transport aircraft/operations HQ/logistics support	341
SM5/12 Re-do Steps 2–5/7 for each Interacting Subsystem within Optional SoS (Containing System)	342
Command and Control	343
Fractal C ²	344

Design Summary	345
SM6/1 Instantiate as Single Organismic Blue SoS Dynamic Model	345
SM6/1 and 6/2 Instantiate Blue MLF2010 and Red Opposition	346
Summary	347
Conclusion	348

PART III SYSTEMS METHODOLOGY AND SYSTEMS ENGINEERING 349

15 SYSTEMS ENGINEERING — THE REAL DEAL 351

Distinguishing Systems Engineering From the ‘Look-alikes’	351
Distinguishing Systems Engineering From the Engineering of Systems	353
Human — part of the system, or user of the artifact?	353
Linear vs nonlinear	353
Top-down vs bottom-up	354
Flavors of Systems Engineering	354
Unprecedented, one-off systems	354
Evolving systems	355
Extant operational systems	356
Volume manufacturing/supply systems	357
Systems Engineering ‘Strategies’	357
The waterfall	358
The spiral	360
Concurrent	361
Chaos	362
Functional, Project and Program Management	363
‘Eine Kleine Systems Engineering Archaeology’	365
M’Pherson’s system design framework	365
M’Pherson’s design hierarchy for a complex system	366
M’Pherson’s systems engineering organization in project management	367
SEAMS	368
Systems Architectures	370
The effect of systems architecture	371
Systems architectural strengths and weaknesses	371
Architecture analogies	374
Contained and encapsulated systems viewpoints	376
Purposeful Systems Architectures	377
Layered architectures	379
ISO open systems interconnect	380
Command and control architectures	381
Enterprise architectures	382
Human Activity Systems	383
Why human activity systems?	383
The human-machine divide	384
Self-organizing HASs	385
Training	385
Societal Systems	386
Social engineering	389
Summary	392
Assignment	393

16	SYSTEMS CREATION: HAND OF PURPOSE, ROOT OF EMERGENCE	395
	The Hand of Purpose Flowing Through Human and Machine	395
	Preserving Interfunctional Connections in Functional-to-physical Mapping	397
	Emphasizing the Process View	400
	Design, Integration and Test	402
	Summary	403
	Assignment	404
	CASE E: THE POLICE COMMAND AND CONTROL SYSTEM	405
	The Problem Space	405
	Social engineering — irresponsible liberalization?	406
	Political correctness: the new secular religion	408
	Politics in policing — tough on crime, tough on the causes...	409
	The Solution Space	410
	Policing in a democracy	410
	Changes in policing	411
	Hawks, doves, liberals and terrorists	412
	Social atomization, fear of crime, and the reactive spiral	412
	Progressive reduction in the state of stability	414
	The terrorism issue	416
	Remedial Solution Concepts	416
	Proactive policing, gearing and reactive demand	416
	Terrorism changes the picture...	417
	Cost-effectiveness of deterrent, crime prevention policing	418
	Recruiting proactive police	418
	Peacemaking, peacekeeping and peace building: Levels 1, 2 and 3 policing	419
	Concepts of Operations	420
	Policing models	420
	Intelligence-led proactive policing	421
	Designing a Solution System	421
	Summary and Conclusion	423
	CASE F: FIGHTER AVIONICS SYSTEM DESIGN	425
	The Problem Space	425
	Prescribed Solution	426
	Designing the Solution System	426
	Flies in the ointment	426
	Fighting the aircraft — the missing CONOPS	427
	Government reluctance	429
	Systems concepts — triangulating ghosts	430
	Systems concepts — LANCE	430
	Conclusions	431
17	SOS ENGINEERING PRINCIPLES AND PRACTICES	433
	Creating, Developing and Evolving a SoS	433
	Limitations in SE for SoS	434

Strategy for SoS Engineering	435
'Spinning plates'	436
Continual redesign	436
SoS Architectures	437
SoS pipeline architecture	437
SoS complementary architecture	439
SoS — Unified Whole, or Dissociated Set?	441
Managing Change in a SoS	443
System of Systems Engineering	444
Summary	445
Assignment	446
CASE G: DEFENSE PROCUREMENT IN THE 21ST CENTURY	447
The Problem Space	447
Difficulties in predicting the need	447
Cutting edge of technology — was defense, now commerce	449
Bureaucracy blunting the cutting edge for defense	449
Security	451
Conceptual Remedial Solutions	452
CONOPS	454
System Design	457
Conclusions	458
18 SYSTEMS ENGINEERING: INTELLIGENT SYSTEMS	459
Introduction	459
What is an Intelligent System?	460
Defining Intelligence	461
Kinds of intelligence	461
Intelligence and survival	461
Predicting the future	462
About Making Decisions	463
What Characterizes a Learning Organization/Intelligent Enterprise ...?	465
Situation Facing Intelligent Enterprises	466
Making intelligent choices — intelligent enterprise model	468
Innovative decision-making model	469
Learning and Intelligent Behavior	471
Keeping the Enterprise Intelligent	472
Continual redesign — reprise	473
Summary	473
Assignment	474
CASE H: GLOBAL WARMING, CLIMATE CHANGE AND ENERGY	477
Energy, Demands, Resources and Reserves	477
Global Warming and Climate Change	478
Choices	478

Controlling rising greenhouse gas levels	479
Measures to ameliorate the effects of climate change	479
Rational and Irrational Alternative Energy Sources	480
Hydroelectricity	480
Wind power	481
Tidal flow	481
Wave power	482
Moon power	482
Biomass solar power	482
Alternative summary	483
Nuclear Energy	483
Future Imperfect...	484
Dyson spheres	485
Nuclear winter	485
Volcanic effects on climate	485
Industrial pollution	485
The Case for Active Climate Control	486
Risk from 'doing too little, too late'	486
Remedial Solution Concept	487
Appreciating the problem	487
Regulating the solar constant	488
The L_1 cloud concept	489
L_1 cloud CONOPS	490
The L_1 sunshield concept	490
Sunshield construction	491
L_1 sunshield concept of operations	493
Comparative timescales	493
Risks	494
Critique	494
REFERENCES	497
INDEX	499
