

A BRIEF COURSE IN

Mathematical Statistics

ELLIOT A. TANIS • ROBERT V. HOGG

CONTENTS

	Preface	v
1	Probability	1
	1.1 Basic Concepts	1
	1.2 Methods of Enumeration	11
	1.3 Conditional Probability	18
	1.4 Independent Events	27
	1.5 Bayes's Theorem	33
	Chapter One Comments	39
2	Discrete Distributions	40
	2.1 Discrete Probability Distributions	40
	2.2 Expectations	49
	2.3 Special Discrete Distributions	59
	2.4 Estimation	68
	Application	75
	2.5 Linear Functions of Independent Random Variables	79
	2.6 Multivariate Discrete Distributions	84
	Chapter Two Comments	96
3	Continuous Distributions	97
	3.1 Descriptive Statistics and EDA	97
	Applications	106
	3.2 Continuous Probability Distributions	112
	3.3 Special Continuous Distributions	118
	3.4 The Normal Distribution	126
	3.5 Estimation in the Continuous Case	134
	3.6 The Central Limit Theorem	142
	3.7 Approximations for Discrete Distributions	148
	Chapter Three Comments	154
4	Applications of Statistical Inference	156
	4.1 Summary of Necessary Theoretical Results	156
	4.2 Confidence Intervals Using χ^2 , F , and T	160
	4.3 Confidence Intervals and Tests of Hypotheses	172
	4.4 Basic Tests Concerning One Parameter	179
	4.5 Tests of the Equality of Two Parameters	189
	4.6 Simple Linear Regression	197
	4.7 More on Linear Regression	210

4.8	One-Factor Analysis of Variance	218
4.9	Distribution-Free Confidence and Tolerance Intervals	227
	Applications	235
4.10	Chi-Square Goodness of Fit Tests	238
4.11	Contingency Tables	247
	Chapter Four Comments	259
5	Computer-Oriented Techniques	260
5.1	Computation of Statistics	260
5.2	Computer Algebra Systems	265
5.3	Simulation	277
5.4	Resampling	285
	Chapter Five Comments	294
6	Some Sampling Distribution Theory	295
6.1	Moment-Generating Function Technique	295
6.2	M.G.F. of Linear Functions	301
6.3	Limiting Moment-Generating Functions	306
6.4	Use of Order Statistics in Non-Regular Cases	313
	Chapter Six Comments	317
A	References	319
B	Tables	321
C	Answers to Odd-Numbered Exercises	341
	Index	357
