Chemical Process Equipment

Selection and Design

Revised Second Edition

Contents

PREFACE TO THE SECOND EDITION	viii	6.4. Pipeline Networks	90
PREFACE TO THE FIRST EDITION	ix	6.5. Optimum Pipe Diameter	92
CONTRIBUTORS	x	6.6. Non-Newtonian Fluids	94
CHAPTER 0 RULES OF THUMB: SUMMARY	xi	6.7. Gases	100
CHAPTER 1 INTRODUCTION		6.8. Liquid-Gas Flow in Pipelines	103
1.1. Process Design	1	6.9. Granular and Packed Beds	105
1.2. Equipment	1	6.10. Gas-Solid Transfer	109
1.3. Categories of Engineering Practice	1	6.11. Fluidization of Beds of Particles with Gases	110
1.4. Sources of Information for Process Design	2	References	117
1.5. Codes, Standards, and Recommended Practices	2	CHAPTER 7 FLUID TRANSPORT EQUIPMENT	119
1.6. Material and Energy Balances	3	7.1. Piping	119
1.7. Economic Balance	4	7.2. Pump Theory	121
1.8. Design Safety Factors	6	7.3. Pump Characteristics	124
1.9. Safety of Plant and Environment	7	7.4. Criteria for Selection of Pumps	126
1.10. Steam and Power Supply	8	7.5. Equipment for Gas Transport	128
1.11. Design Basis	10	7.6. Theory and Calculations of Gas Compression	137
1.12. Laboratory and Pilot Plant Work	12	7.7. Ejector and Vacuum Systems	150
References	15	References	157
CHAPTER 2 FLOWSHEETS	17	CHAPTER 8 HEAT TRANSFER AND HEAT EXCHANGERS	159
2.1. Block Flowsheets	17	8.1. Conduction of Heat	159
2.2. Process Flowsheets	17	8.2. Mean Temperature Difference	161
2.3. Process and Instrumentation Diagrams (P&ID)	19	8.3. Heat Transfer Coefficients	163
2.4. Utility Flowsheets	19	8.4. Data of Heat Transfer Coefficients	170
2.5. Drawing of Flowsheets	19	8.5. Pressure Drop in Heat Exchangers	173
References	29	8.6. Types of Heat Exchangers	173
CHAPTER 3 PROCESS CONTROL	31	8.7. Shell-and-Tube Heat Exchangers	179
3.1. The Feedback Control Loop	31	8.8. Condensers	185
3.2. Control Loop Performance and Tuning Procedures	33	8.9. Reboilers	191
3.3. Single Stream Control	34	8.10. Evaporators	196
3.4. Unit Operation Control	37	8.11. Fired Heaters	197
References	51	8.12. Insulation of Equipment	209
CHAPTER 4 DRIVERS FOR MOVING EQUIPMENT	53	8.13. Refrigeration	212
4.1. Motors	53	References	218
4.2. Steam Turbines and Gas Expanders	54	CHAPTER 9 DRYERS AND COOLING TOWERS	219
4.3. Combustion Gas Turbines and Engines	57	9.1. Interaction of Air and Water	219
References	60	9.2. Rate of Drying	222
CHAPTER 5 TRANSFER OF SOLIDS	61	9.3. Classification and General Characteristics of Dryers	226
5.1. Slurry Transport	61	9.4. Batch Dryers	230
5.2. Pneumatic Conveying	63	9.5. Continuous Tray and Conveyor Belt Dryers	232
5.3. Mechanical Conveyors and Elevators	68	9.6. Rotary Cylindrical Dryers	235
5.4. Chutes	76	9.7. Drum Dryers for Solutions and Slurries	242
5.5. Solids Feeders	77	9.8. Pneumatic Conveying Dryers	243
References	81	9.9. Flash and Ring Dryers	245
CHAPTER 6 FLOW OF FLUIDS	83	9.10. Fluidized Bed Dryers	249
6.1. Properties and Units	83	9.11. Spray Dryers	255
6.2. Energy Balance of a Flowing Fluid	84	9.12. Cooling Towers	262
6.3. Liquids	86	References	271
		CHAPTER 10 MIXING AND AGITATION	273
		10.1. A Basic Stirred Tank Design	273
		10.2. Vessel Flow Patterns	275
		10.3. Agitator Power Requirements	277
		10.4. Impeller Pumping	277
		10.5. Tank Blending	277

- 10.6. Heat Transfer 283
- 10.7. Vortex Depth 284
- 10.8. Solid Suspension 285
- 10.9. Solids Dissolving 290
- 10.10. Gas-Liquid Dispersions 291
- 10.11. Liquid-Liquid (L-L) Dispersions 294
- 10.12. Pipeline Mixers 299
- 10.13. Compartmented Columns 303
- 10.14. Fast Competitive/Consecutive (C/C) Reactions 311
- 10.15. Scale-Up 317
 - Nomenclature 321
 - References 322

CHAPTER 11 SOLID-LIQUID SEPARATION 325

- 11.1. Processes and Equipment 325
- 11.2. Liquid-Particle Characteristics 326
- 11.3. Theory of Filtration 326
- 11.4. Resistance to Filtration 333
- 11.5. Thickening and Clarifying 337
- 11.6. Laboratory Testing and Scale-Up 338
- 11.7. Illustrations of Equipment 339
- 11.8. Applications and Performance of Equipment 351
 - References 355

CHAPTER 12 DISINTEGRATION, AGGLOMERATION, AND SIZE SEPARATION OF PARTICULATE SOLIDS 357

- 12.1. Screening 357
- 12.2. Commercial Classification with Streams of Air or Water 364
- 12.3. Size Reduction 364
- 12.4. Equipment for Size Reduction 366
- 12.5. Particle Size Enlargement (Agglomeration) 374
 - References 392

CHAPTER 13 DISTILLATION AND GAS ABSORPTION 395

- 13.1. Vapor-Liquid Equilibria 395
- 13.2. Single-Stage Flash Calculations 397
- 13.3. Evaporation or Simple Distillation 401
- 13.4. Binary Distillation 402
- 13.5. Batch Distillation 413
- 13.6. Multicomponent Separation: General Considerations 416
- 13.7. Estimation of Reflux and Number of Trays (Fenske-Underwood-Gilliland Method) 418
- 13.8. Absorption Factor Shortcut Method of Edmister 421
- 13.9. Separations in Packed Towers 421
- 13.10. Basis for Computer Evaluation of Multicomponent Separations 427
- 13.11. Special Kinds of Distillation Processes 435
- 13.12. Tray Towers 449
- 13.13. Packed Towers 455
- 13.14. Efficiencies of Trays and Packings 458
 - References 479

CHAPTER 14 EXTRACTION AND LEACHING 481

- 14.1. Introduction 481
- 14.2. Equilibrium Relations 482
- 14.3. Calculation of Stage Requirements 488

- 14.4. Countercurrent Operation 491
- 14.5. Leaching of Solids 495
- 14.6. Numerical Calculation of Multicomponent Extraction 497
- 14.7. Equipment for Extraction 501
- 14.8. Pilot Testing 519
 - References 519

CHAPTER 15 ADSORPTION AND ION EXCHANGE 521

- 15.1. Adsorption Equilibria 521
- 15.2. Ion Exchange Equilibria 523
- 15.3. Adsorption Behavior in Packed Beds 526
- 15.4. Gas Adsorption Cycles 531
- 15.5. Adsorption Design and Operating Practices 534
- 15.6. Parametric Pumping 535
- 15.7. Ion Exchange Design and Operating Practices 537
- 15.8. Production Scale Chromatography 539
- 15.9. Equipment and Processes 540
 - References 551

CHAPTER 16 CRYSTALLIZATION FROM SOLUTIONS AND MELTS 553

- 16.1. Some General Crystallization Concepts 554
- 16.2. Importance of the Solubility Curve in Crystallizer Design 555
- 16.3. Solubilities and Equilibria 555
- 16.4. Crystal Size Distribution 557
- 16.5. The Process of Crystallization 559
- 16.6. The Ideal Stirred Tank 565
- 16.7. Kinds of Crystallizers 569
- 16.8. Melt Crystallization and Purification 575
 - References 580

CHAPTER 17 CHEMICAL REACTORS 581

- 17.1. Design Basis and Space Velocity 581
- 17.2. Rate Equations and Operating Modes 581
- 17.3. Material and Energy Balances of Reactors 586
- 17.4. Nonideal Flow Patterns 587
- 17.5. Selection of Catalysts 592
- 17.6. Types and Examples of Reactors 598
- 17.7. Heat Transfer in Reactors 610
- 17.8. Classes of Reaction Processes and Their Equipment 620
 - References 639

CHAPTER 18 PROCESS VESSELS 641

- 18.1. Drums 641
- 18.2. Fractionator Reflux Drums 642
- 18.3. Liquid-Liquid Separators 642
- 18.4. Gas-Liquid Separators 643
- 18.5. Storage Tanks 652
- 18.6. Mechanical Design of Process Vessels 654
- 18.7. Bins and Hoppers 659
 - References 660

CHAPTER 19 MEMBRANE SEPARATIONS 663

- 19.1. Membrane Processes 663
- 19.2. Liquid-Phase Separations 669
- 19.3. Gas Permeation 670

- 19.4. Membrane Materials and Applications 670
- 19.5. Membrane Cells and Equipment Configurations 672
- 19.6. Industrial Applications 673
- 19.7. Subquality Natural Gas 673
- 19.8. The Enhancement of Separation 676
- 19.9. Permeability Units 679
- 19.10. Derivations and Calculations for Single-Stage Membrane Separations 683
- References 689

CHAPTER 20 GAS-SOLID SEPARATIONS 691

- 20.1. Gas-Solid Separations 691
- 20.2. Foam Separation and Froth Flotation 699
- 20.3. Sublimation and Freeze Drying 701
- 20.4. Separations by Thermal Diffusion 702
- 20.5. Electrochemical Synthesis 704
- 20.6. Fermentation Processing 711
- References 715

CHAPTER 21 COSTS OF INDIVIDUAL EQUIPMENT 717

APPENDIX A UNITS, NOTATION, AND GENERAL DATA 727

APPENDIX B EQUIPMENT SPECIFICATION FORMS 737

APPENDIX C QUESTIONNAIRES OF EQUIPMENT SUPPLIERS 783

INDEX 803
