

Thompson & Thompson

GENETICS IN MEDICINE

Nussbaum McInnes Willard

SAUNDERS
ELSEVIER

Edition 7

Contents

Chapter 1

Introduction, 1

- Genetics and Genomics in Medicine, 1
- Onward, 2

Chapter 2

The Human Genome and the Chromosomal Basis of Heredity, 5

- The Human Genome and Its Chromosomes, 6
- Cell Division, 13
- Human Gametogenesis and Fertilization, 20
- Medical Relevance of Mitosis and Meiosis, 22

Chapter 3

The Human Genome: Gene Structure and Function, 25

- Information Content of the Human Genome, 25
- The Central Dogma:
 - DNA → RNA → Protein, 26
- Gene Organization and Structure, 28
- Fundamentals of Gene Expression, 30
- Gene Expression in Action: The β -Globin Gene, 33
- Gene Regulation and Changes in Activity of the Genome, 36
- Variation in Gene Expression and its Relevance to Medicine, 38

Chapter 4

Tools of Human Molecular Genetics, 41

- Analysis of Individual DNA and RNA Sequences, 41
- Methods of Nucleic Acid Analysis, 48
- The Polymerase Chain Reaction, 50
- DNA Sequence Analysis, 53
- Advanced Techniques Using Digital Image Capture of Fluorescence-Tagged Nucleotides, 55
- Western Blot Analysis of Proteins, 57

Chapter 5

Principles of Clinical Cytogenetics, 59

- Introduction to Cytogenetics, 59
- Chromosome Abnormalities, 65
- Parent-of-Origin Effects, 77
- Studies of Chromosomes in Human Meiosis, 81
- Mendelian Disorders with Cytogenetic Effects, 82
- Cytogenetic Analysis in Cancer, 82

Chapter 6

Clinical Cytogenetics: Disorders of the Autosomes and the Sex Chromosomes, 89

- Autosomal Disorders, 89
- The Sex Chromosomes and Their Abnormalities, 98
- Disorders of Gonadal and Sexual Development, 109

Chapter 7

Patterns of Single-Gene Inheritance, 115

- Overview and Concepts, 115
- Mendelian Inheritance, 118
- Factors Affecting Pedigree Patterns, 119
- Correlating Genotype and Phenotype, 121
- Autosomal Patterns of Mendelian Inheritance, 122
- X-Linked Inheritance, 129
- Pseudoautosomal Inheritance, 135
- Mosaicism, 135
- Imprinting In Pedigrees, 137
- Unstable Repeat Expansions, 139
- Conditions that May Mimic Mendelian Inheritance of Single-Gene Disorders, 144
- Maternal Inheritance of Disorders Caused by Mutations in the Mitochondrial Genome, 144
- Family History as Personalized Medicine, 146

Chapter 8

Genetics of Common Disorders with Complex Inheritance, 151

- Qualitative and Quantitative Traits, 152
- Genetic and Environmental Modifiers of Single-Gene Disorders, 159

Examples of Multifactorial Traits for which Genetic and Environmental Factors Are Known, 160

Chapter 9

Genetic Variation in Individuals and Populations: Mutation and Polymorphism, 175

Mutation, 175
 Types of Mutations and Their Consequences, 177
 Human Genetic Diversity, 183
 Inherited Variation and Polymorphism in DNA, 184
 Inherited Variation and Polymorphism in Proteins, 186
 Genotypes and Phenotypes in Populations, 192
 Factors that Disturb Hardy-Weinberg Equilibrium, 195
 Ethnic Differences in the Frequency of Various Genetic Diseases, 199

Chapter 10

Human Gene Mapping and Disease Gene Identification, 207

The Genetic Landscape of the Human Genome, 207
 Mapping Human Genes by Linkage Analysis, 217
 Mapping of Complex Traits, 222
 From Gene Mapping to Gene Identification, 226

Clinical Case Studies Illustrating Genetic Principles, 231

Chapter 11

Principles of Molecular Disease: Lessons from the Hemoglobinopathies, 323

The Effect of Mutation on Protein Function, 323
 How Mutations Disrupt the Formation of Biologically Normal Proteins, 325
 The Hemoglobins, 326
 The Hemoglobinopathies, 329

Chapter 12

The Molecular, Biochemical, and Cellular Basis of Genetic Disease, 345

Diseases due to Mutations in Different Classes of Proteins, 345
 Diseases Involving Enzymes, 348

Defects in Receptor Proteins, 360
 Transport Defects, 364
 Disorders of Structural Proteins, 367
 Neurodegenerative Disorders, 377

Chapter 13

The Treatment of Genetic Disease, 393

The Current State of Treatment of Genetic Disease, 393
 Special Considerations in Treating Genetic Disease, 395
 Treatment Strategies, 396
 The Molecular Treatment of Disease, 399

Chapter 14

Developmental Genetics and Birth Defects, 419

(with the assistance of Leslie G. Biesecker, MD)

Developmental Biology in Medicine, 419
 Introduction to Developmental Biology, 422
 Genes and Environment in Development, 424
 Basic Concepts of Developmental Biology, 426
 Cellular and Molecular Mechanisms in Development, 434
 Interaction of Developmental Mechanisms in Embryogenesis, 440

Chapter 15

Prenatal Diagnosis, 443

Indications for Prenatal Diagnosis by Invasive Testing, 443
 Methods of Prenatal Diagnosis, 444
 Laboratory Studies, 453
 Emerging Technologies for Prenatal Diagnosis, 456
 Prenatal Prevention and Management of Genetic Disease, 457
 Genetic Counseling for Prenatal Diagnosis, 458

Chapter 16

Cancer Genetics and Genomics, 461

Genetic Basis of Cancer, 461
 Oncogenes, 464
 Tumor-Suppressor Genes, 467
 Tumor Progression, 479
 Applying Genomics to Individualize Cancer Therapy, 479
 Cancer and the Environment, 482

Chapter 17**Personalized Genetic Medicine, 485**

Family History as Personalized Genetic Medicine, 485

Genetic Screening in Populations, 487

Screening for Genetic Susceptibility to Disease, 490

Chapter 18**Pharmacogenetics and Pharmacogenomics, 497**

Using Risk Information to Improve Care: Pharmacogenetics, 497

Pharmacogenomics, 504

Role of Ethnicity and Race in Personalized Medicine, 504

Chapter 19**Genetic Counseling and Risk Assessment, 507**

The Process of Genetic Counseling, 507

Determining Recurrence Risks, 509

Application of Molecular Genetics to Determination of Recurrence Risks, 516
Empirical Recurrence Risks, 519

Chapter 20**Ethical Issues in Medical Genetics, 523**

Ethical Dilemmas Arising in Medical Genetics, 523

Eugenic and Dysgenic Effects of Medical Genetics, 528

Genetics in Medicine, 529

Glossary, 531**Answers to Problems, 551****Index, 567**
