Introduction to Tissue Engineering	1		
1. The History and Scope of Tissue Engineering	3	6. Organization of Cells into Higher-Ordered Structures	67
<i>Joseph Vacanti and Charles A. Vacanti</i>		<i>Jon D. Ahlstrom and Carol A. Erickson</i>	
I. Introduction	3	I. Introduction	67
II. Scientific Challenges	4	II. Molecular Mechanisms of the EMT	68
III. Cells	4	III. The EMT Transcriptional Program	70
IV. Materials	5	IV. Molecular Control of the EMT	72
V. General Scientific Issues	5	V. Conclusion	76
VI. Social Challenges	6	VI. References	76
VII. References	6		
2. The Challenge of Imitating Nature	7	7. The Dynamics of Cell-ECM Interactions	81
<i>Robert M. Nerem</i>		<i>M. Petreaca and Manuela Martins-Green</i>	
I. Introduction	7	I. Introduction	81
II. Cell Technology	8	II. Cell-ECM Interactions	84
III. Construct Technology	10	III. Signal Transduction Events During Cell-ECM Interactions	90
IV. Integration into the Living System	11	IV. Relevance for Tissue Engineering	93
V. Concluding Discussion	12	V. References	95
VI. Acknowledgments	13		
VII. References	13	8. Matrix Molecules and Their Ligands	101
3. Moving into the Clinic	15	<i>Bjorn Reino Olsen</i>	
<i>Alan J. Russell and Timothy Bertram</i>		I. Introduction	101
I. Introduction	15	II. Collagens — Major Constituents of ECM	102
II. History of Clinical Tissue Engineering	16	III. Elastic Fibers and Microfibrils	107
III. Strategies to Advance Toward the Clinic	20	IV. Other Multifunctional Proteins in ECM	107
IV. Bringing Technology Platforms to the Clinical Setting	26	V. Proteoglycans — Multifunctional Molecules in the Extracellular Matrix and on Cell Surfaces	111
V. Transition to Clinical Testing	28	VI. Conclusion	112
VI. Establishing a Regulatory Pathway	30	VII. References	112
VII. Conclusions	30		
VIII. Acknowledgments	30	9. Morphogenesis and Tissue Engineering	117
IX. References	31	<i>A. H. Reddi</i>	
4. Future Perspectives	33	I. Introduction	117
<i>Mark E. Furth and Anthony Atala</i>		II. Bone Morphogenetic Proteins (BMPs)	118
I. Clinical Need	33	III. Cartilage-Derived Morphogenetic Proteins (CDMPs)	121
II. Current State of the Field	33	IV. Pleiotropy and Thresholds	121
III. Current Challenges	34	V. BMPs Bind to Extracellular Matrix	122
IV. Future Directions	34	VI. BMP Receptors	122
V. Future Challenges	42	VII. Responding Stem Cells	123
VI. References	42	VIII. Morphogens and Gene Therapy	123
		IX. Biomimetic Biomaterials	124
Part I. The Basis of Growth and Differentiation	51	X. Tissue Engineering of Bones and Joints	124
5. Molecular Biology of the Cell	53	XI. Future Challenges	125
<i>Jonathan Slack</i>		XII. Acknowledgments	126
I. Introduction	53	XIII. References	126
II. The Cell Nucleus	54		

10. Gene Expression, Cell Determination, and Differentiation <i>William Nikovits, Jr., and Frank E. Stockdale</i>	129	III. Growth Factors and Cytokines Active as Early Mediators of the Inflammatory Process	195
I. Introduction	129	IV. Inflammatory Response Mediators Activate Transcription of Quiescent Genes	196
II. Determination and Differentiation	129	V. Biologic Properties of SIG (Chemokine) Family Members	197
III. MyoD and the bHLH Family of Developmental Regulatory Factors	131	VI. Regulation of <i>JE</i> Gene Expression by Glucocorticoids	197
IV. MEFs — Coregulators of Development	132	VII. Growth Factors and Accelerated Healing	197
V. Pax in Development	132	VIII. Role of Basic Fibroblast Growth Factor and Angiogenesis	199
VI. Conclusions	132	IX. Pleiotrophin Remodels Tumor Microenvironment and Stimulates Angiogenesis	200
VII. References	133	X. Other Roles of Growth Factors and Cytokines	201
Part II. In Vitro Control of Tissue Development	135	XI. Conclusions	201
11. Engineering Functional Tissues <i>Lisa E. Freed and Farshid Guilak</i>	137	XII. References	201
I. Introduction	137	15. Mechanochemical Control of Cell Fate Switching <i>Donald E. Ingber</i>	207
II. Key Concepts	138	I. Introduction	207
III. <i>In Vitro</i> Studies Aimed at Clinical Translation	139	II. Extracellular Matrix Structure and Function	207
IV. Representative <i>In Vitro</i> Culture Environments	139	III. Pattern Formation Through ECM Remodeling	209
V. Convective Mixing, Flow, and Mass Transfer	142	IV. Mechanochemical Switching Between Cell Fates	210
VI. Culture Duration and Mechanical Conditioning	145	V. Summary	213
VII. Conclusions	149	VI. The Future	213
VIII. Acknowledgments	150	VII. Acknowledgments	214
IX. References	150	VIII. References	214
12. Principles of Tissue Culture and Bioreactor Design <i>R. I. Freshney, B. Obradovic, W. Grayson, C. Cannizzaro, and Gordana Vunjak-Novakovic</i>	155	Part III. In Vivo Synthesis of Tissues and Organs	217
I. Introduction	155	16. <i>In Vivo</i> Synthesis of Tissues and Organs <i>Brendan A. Harley and Ioannis V. Yannas</i>	219
II. Basic Principles of Cell and Tissue Culture	155	I. Introduction	219
III. Principles of Bioreactor Design	164	II. Mammalian Response to Injury	220
IV. Summary	180	III. Methods to Treat Loss of Organ Function	221
V. Acknowledgments	180	IV. Active Extracellular Matrix Analogs	223
VI. References	180	V. Basic Parameters for <i>In Vivo</i> Regeneration Studies: Reproducible, Nonregenerative Wounds	227
13. Regulation of Cell Behavior by Extracellular Proteins <i>Amy D. Bradshaw and E. Helene Sage</i>	185	VI. Examples of <i>In Vivo</i> Organ Regeneration	228
I. Introduction	185	VII. Conclusions	235
II. Thrombospondin-1	185	VIII. Acknowledgments	236
III. Thrombospondin-2	187	IX. References	236
IV. Tenascin-C	187	Part IV. Models for Tissue Engineering	239
V. Osteopontin	188	17. Models as Precursors for Prosthetic Devices <i>Eugene Bell</i>	241
VI. SPARC	189	I. Introduction	241
VII. Conclusions	190	II. Pigmentation of the Living-Skin Equivalent (LSE) <i>In Vitro</i>	244
VIII. References	191		
14. Growth Factors <i>Thomas F. Deuel and Yunchao Chang</i>	193		
I. Introduction	193		
II. Wound Healing	194		

III. The Living-Skin Equivalent as an Immunological Model	244	V. Conclusions	304
IV. The Living-Skin Equivalent as a Disease Model	244	VI. References	305
V. Wound-Healing Model	246	22. Polymer Scaffold Fabrication	309
VI. Vascular Models without Cells	247	<i>Matthew B. Murphy and Antonios G. Mikos</i>	
VII. Vascular Models with Cells Added	247	I. Introduction	309
VIII. Conclusions	248	II. Fiber Bonding	310
IX. References	249	III. Electrospinning	311
18. Quantitative Aspects	251	IV. Solvent Casting and Particulate Leaching	311
<i>Alan J. Grodzinsky, Roger D. Kamm, and Douglas A. Lauffenburger</i>		V. Melt Molding	312
I. Introduction	251	VI. Membrane Lamination	312
II. Molecular Interactions with Cells	251	VII. Extrusion	312
III. Molecular and Cell Transport Through Tissue	253	VIII. Freeze-Drying	313
IV. Cell and Tissue Mechanics	256	IX. Phase Separation	313
V. References	260	X. High-Internal-Phase Emulsion	313
Part V. Biomaterials in Tissue Engineering	263	XI. Gas Foaming	313
19. Micro-Scale Patterning of Cells and Their Environment	265	XII. Polymer/Ceramic Composite Fabrication	314
<i>Xingyu Jiang, Shuichi Takayama, Robert G. Chapman, Ravi S. Kane, and George M. Whitesides</i>		XIII. Rapid Prototyping of Solid Free Forms	315
I. Introduction	265	XIV. Peptide Self-Assembly	316
II. Soft Lithography	266	XV. <i>In Situ</i> Polymerization	316
III. Self-Assembled Monolayers (SAMs)	266	XVI. Conclusions	317
IV. Microcontact Printing and Microfeatures Used in Cell Biology	267	XVII. Acknowledgments	317
V. Microfluidic Patterning	272	XVIII. References	320
VI. Laminar Flow Patterning	272	23. Biodegradable Polymers	323
VII. Conclusion and Future Prospects	274	<i>James M. Pachence, Michael P. Bohrer, and Joachim Kohn</i>	
VIII. Acknowledgments	275	I. Introduction	323
IX. References	275	II. Biodegradable Polymer Selection Criteria	323
20. Cell Interactions with Polymers	279	III. Biologically Derived Bioresorbables	324
<i>W. Mark Saltzman and Themis R. Kyriakides</i>		IV. Synthetic Polymers	327
I. Introduction	279	V. Creating Materials for Tissue-Engineered Products	332
II. Methods for Characterizing Cell Interactions with Polymers	279	VI. Conclusion	333
III. Cell Interactions with Polymers	283	VII. References	333
IV. Cell Interactions with Polymers in Suspension	289	24. Micro- and Nanofabricated Scaffolds	341
V. Cell Interactions with Three-Dimensional Polymer Scaffolds and Gels	291	<i>Christopher J. Bettinger, Jeffrey T. Borenstein, and Robert Langer</i>	
VI. Cell Interactions Unique to the <i>In Vivo</i> Setting	292	I. Introduction	341
VII. References	292	II. Adaptation of Traditional Micro-Scale Techniques for Scaffold Fabrication	342
21. Matrix Effects	297	III. Three-Dimensional Scaffolds with Micro-Scale Architecture	346
<i>Jeffrey A. Hubbell</i>		IV. Three-Dimensional Scaffold Assembly	348
I. Introduction	297	V. Microfabrication of Cell-Seeded Scaffolds	352
II. Extracellular Matrix Proteins and Their Receptors	297	VI. Summary and Future Direction	356
III. Model Systems for Study of Matrix Interactions	301	VII. References	357
IV. Cell Pattern Formation by Substrate Patterning	304	25. Three-Dimensional Scaffolds	359
		<i>Ying Luo, George Engelmayr, Debra T. Auguste, Lino da Silva Ferreira, Jeffrey M. Karp, Rajiv Saigal, and Robert Langer</i>	
		I. Introduction	359
		II. Three-Dimensional Scaffold Design and Engineering	360
		III. Conclusions	370
		IV. References	371

Part VI. Transplantation of Engineered Cells and Tissues

26. Tissue Engineering and Transplantation in the Fetus 375
Dario O. Fauza
 I. Introduction 377
 II. General Characteristics of Fetal Cells 378
 III. Fetal Tissue Engineering 379
 IV. Ethical Considerations 384
 V. The Fetus as a Transplantation Host 384
 VI. Conclusions 385
 VII. References 386

27. Immunomodulation 389
Denise L. Faustman
 I. Introduction 389
 II. Origin of the Designer Tissue Concept 390
 III. First Demonstration of the Concept 390
 IV. Expansion of Research on Designer Tissues 391
 V. Antibody Masking 391
 VI. Gene Ablation 392
 VII. RNA Ablation 393
 VIII. Enzyme Ablation 393
 IX. Mechanisms of Graft Survival After Class I Donor Ablation or Antibody Masking 394
 X. Role of Class I Modifications in Resistance to Recurrent Autoimmunity 395
 XI. Launching of Xenogeneic Human Clinical Trials in the United States Using Immunomodulation 396
 XII. Comment 396
 XIII. References 397

28. Immunoisolation 399
Beth A. Zielinski and Michael J. Lysaght
 I. Introduction 399
 II. Theory and Capsule Format 399
 III. Cell Sourcing 401
 IV. Host Immune Responses to Encapsulated Cells 401
 V. Conclusion 402
 VI. References 403

29. Engineering Challenges in Immunobarrier Device Development 405
Amy S. Lewis and Clark K. Colton
 I. Introduction 405
 II. Engineering Challenges 406
 III. Strategies for Improving Immunobarrier Devices 410
 IV. Theoretical Analysis of PFC-containing Microcapsules 411
 V. Future Directions 416
 VI. References 416

Part VII. Stem Cells

30. Embryonic Stem Cells 421
Alan Trounson
 I. Introduction 421
 II. Derivation of Human Embryonic Stem Cells (hESC) 422
 III. Selecting Embryos for Producing Embryonic Stem Cells 423
 IV. Maintaining Embryonic Stem Cells 423
 V. Pluripotential Markers of Embryonic Stem Cells 423
 VI. Genetic Manipulation of Embryonic Stem Cells 424
 VII. Differentiation of Embryonic Stem Cells 424
 VIII. Directing Differentiation of Embryonic Stem Cells 425
 IX. Coculture Systems for Directed Differentiation of Embryonic Stem Cells 425
 X. Concluding Comments 426
 XI. References 426

31. Adult Epithelial Tissue Stem Cells 431
Christopher S. Potten and James W. Wilson
 I. Introduction 431
 II. A Definition of Stem Cells 432
 III. Hierarchically Organized Stem Cell Populations 433
 IV. Skin Stem Cells 435
 V. Intestinal Stem Cell System 437
 VI. Stem Cell Organization in Filiform Papillae on the Dorsal Surface of the Tongue 441
 VII. Generalized Scheme 441
 VIII. Adult Stem Cell Plasticity 442
 IX. References 443

32. Embryonic Stem Cells as a Cell Source for Tissue Engineering 445
Ali Khademhosseini, Jeffrey M. Karp, Sharon Gerecht, Lino Ferreira, Gordana Vunjak-Novakovic, and Robert Langer
 I. Introduction 445
 II. Maintenance of ESCs 446
 III. Directed Differentiation 448
 IV. Isolation of Specific Progenitor Cells from ESCs 451
 V. Transplantation 452
 VI. Future Prospects 454
 VII. Conclusions 454
 VIII. Acknowledgments 455
 IX. References 455

33. Postnatal Stem Cells 459
Pamela Gehron Robey and Paolo Bianco
 I. Introduction 459
 II. Reservoirs of Postnatal Stem Cells 459
 III. Current Approaches to Tissue Engineering 460
 IV. Conclusions 465

V. Acknowledgments	466		
VI. References	466
