PART I THEORETICAL INTRODUCTION		
1 Introduction		3
1.1 Bioprocesses		3
1.1.1 History of Biotechnology and Today's Situation		3
1.1.2 Future Perspectives		6
1.2 Modeling and Assessment in Process Development		7
2 Development of Bioprocesses		11
2.1 Types of Bioprocess and Bioproduct		11
2.1.1 Biocatalysts and Process Types		11
2.1.2 Raw Materials		17
2.1.3 Bioproducts		20
2.2 Bioreaction Stoichiometry, Thermodynamics, and Kinetics		23
2.2.1 Stoichiometry		23
2.2.2 Thermodynamics		28
2.2.3 Kinetics		29

2.3 Elements of Bioprocesses (Unit Operations and Unit Procedures)	32
2.3.1 Upstream Processing	33
2.3.2 Bioreactor	36
2.3.3 Downstream Processing	40
2.3.4 Waste Treatment, Reduction and Recycling	50
2.4 The Development Process	52
2.4.1 Introduction	52
2.4.2 Development Steps and Participants	53
3 Modeling and Simulation of Bioprocesses	61
3.1 Problem Structuring, Process Analysis, and Process Scheme	62
3.1.1 Model Boundaries and General Structure	62
3.1.2 Modeling Steps	63
3.2 Implementation and Simulation	66
3.2.1 Spreadsheet Model	66
3.2.2 Modeling using a Process Simulator	66
3.3 Uncertainty Analysis	71
3.3.1 Scenario Analysis	72
3.3.2 Sensitivity Analysis	73
3.3.3 Monte Carlo Simulation	75
4 Sustainability Assessment	81
4.1 Sustainability	81
4.2 Economic Assessment	82
4.2.1 Capital-Cost Estimation	83
4.2.2 Operating-Cost Estimation	88
4.2.3 Profitability Assessment	94
4.3 Environmental Assessment	95
4.3.1 Introduction	95
4.3.2 Structure of the Method	96
4.3.3 Impact Categories and Groups	99
4.3.4 Calculation of Environmental Factors	103
4.3.5 Calculation of Indices	105
4.3.6 Example Cleavage of Penicillin G	105
4.4 Assessing Social Aspects	107
4.4.1 Introduction	107
4.4.2 Indicators for Social Assessment	108
4.5 Interactions between the Different Sustainability Dimensions	112
PART II BIOPROCESS CASE STUDIES	
Introduction to Case Studies	121
5 Citric Acid – Alternative Process using Starch	125
5.1 Introduction	125
5.2 Fermentation Model	125

5.3	Process Model	128
5.4	Inventory Analysis	130
5.5	Environmental Assessment	132
5.6	Economic Assessment	134
5.7	Conclusions	135
6	Pyruvic Acid – Fermentation with Alternative Downstream Processes	137
6.1	Introduction	137
6.2	Fermentation Model	137
6.3	Process Model	138
6.3.1	Bioreaction and Upstream	138
6.3.2	Downstream Processing	141
6.4	Inventory Analysis	142
6.5	Environmental Assessment	144
6.6	Economic Assessment	145
6.7	Conclusions	145
7	L-Lysine – Coupling of Bioreaction and Process Model	155
	<i>Arnd Knoll, Jochen Buechs</i>	
7.1	Introduction	155
7.2	Basic Strategy	156
7.3	Bioreaction Model	156
7.4	Process Model	159
7.5	Coupling of Bioreaction and Process Model	162
7.5.1	Assumptions	163
7.6	Results and Discussion	164
8	Riboflavin – Vitamin B₂	169
	<i>Wilfried Storhas, Rolf Metz</i>	
8.1	Introduction	169
8.2	Biosynthesis and Fermentation	170
8.3	Production Process and Process Model	171
8.3.1	Upstream Processing	172
8.3.2	Fermentation	174
8.3.3	Downstream Processing	174
8.4	Inventory Analysis	174
8.5	Ecological Assessment	175
8.6	Economic Assessment	176
8.7	Discussion and Concluding Remarks	177
9	α-Cyclodextrin	181
9.1	Introduction	181
9.2	Reaction Model	182

9.3	Process Model	182
9.3.1	Solvent Process	182
9.3.2	Non-solvent Process	184
9.4	Inventory Analysis	185
9.5	Environmental Assessment	186
9.6	Economic Assessment	186
9.7	Conclusions	189
10	Penicillin V	193
10.1	Introduction	193
10.2	Modeling Base Case	193
10.2.1	Fermentation Model	193
10.2.2	Process Model	194
10.3	Inventory Analysis	196
10.4	Environmental Assessment	197
10.5	Economic Assessment	197
10.6	Monte Carlo Simulations	198
10.6.1	Objective Functions, Variables, and Probability Distributions	198
10.6.2	Results	201
10.7	Conclusions	206
11	Recombinant Human Serum Albumin	211
	<i>M. Abdul Kholiq, Elmar Heinzle</i>	
11.1	Introduction	211
11.2	Bioreaction Model	212
11.2.1	Stoichiometry	212
11.2.2	Multi-stage Fermentation and Feeding Plan	213
11.2.3	Total Broth Volume in Production Scale and Raw Material Consumption	214
11.3	Process Model	215
11.3.1	Bioreaction	215
11.3.2	Downstream Processing	215
11.4	Economic Assessment	218
11.5	Ecological Assessment	219
11.6	Conclusions	221
12	Recombinant Human Insulin	225
	<i>Demetri Petrides</i>	
12.1	Introduction	225
12.1.1	Two-chain Method	226
12.1.2	Proinsulin Method	226
12.2	Market Analysis and Design Basis	226
12.2.1	Process Description	227

12.2.2	Inventory Analysis and Environmental Assessment	233
12.2.3	Production Scheduling	234
12.3	Economic Assessment	235
12.4	Throughput-Increase Options	237
12.5	Conclusions	238
13	Monoclonal Antibodies	241
13.1	Introduction	241
13.2	Process Model	241
13.3	Inventory Analysis	243
13.4	Economic Assessment	245
13.5	Environmental Assessment	246
13.6	Uncertainty Analysis	247
13.6.1	Scenarios	247
13.6.2	Sensitivity Analysis	248
13.6.3	Monte Carlo Simulations	249
13.7	Conclusions	255
14	α-1-Antitrypsin from Transgenic Plant Cell Suspension Cultures	261
	<i>Elizabeth Zapalac, Karen McDonald</i>	
14.1	Introduction	261
14.2	Process Description	263
14.3	Model Description	263
14.4	Discussion	265
14.5	Conclusions	268
15	Plasmid DNA	271
	<i>Sindélia S. Freitas, José A. L. Santos, D. Miguel F. Prazeres</i>	
15.1	Introduction	271
15.1.1	General	271
15.1.2	Case Introduction	272
15.1.3	Process Description	272
15.2	Model Description	275
15.2.1	Bioreaction Section	275
15.2.2	Downstream Sections	276
15.3	Inventory Analysis	277
15.4	Economic Assessment	278
15.5	Environmental Assessment	281
15.6	Discussion	282
15.7	Conclusions	283
	Index	287
