Preface xv

Part I Principles of industrial enzyme technology

1 Discovering new industrial enzymes for food applications 3

Thomas Schäfer, Novozymes A/S, Denmark

1.1	Introduction	3
1.2	Where to screen for new enzymes	4
1.3	How to screen for new enzymes	8
1.4	Summary: which option to choose?	13
1.5	References	13

2 Improving enzyme performance in food applications 16

*Ronnie Machielsen, Sjoerd Dijkhuizen and John van der Oost,
Wageningen University, The Netherlands; Thijs Kaper and Loren
Looger, Carnegie Institution of Washington, USA*

2.1	Introduction	16
2.2	Laboratory evolution	17
2.3	Examples of improving enzyme stability and functionality by laboratory evolution	24
2.4	Rational and computational protein engineering	28
2.5	Examples of improving enzyme stability and ability by rational protein engineering	30
2.6	Examples of combined laboratory evolution and computational design	34

2.7	Summary and future trends	35
2.8	Sources of further information and advice	35
2.9	References	36
3	Industrial enzyme production for food applications	43
	<i>Carsten Hjort, Novozymes A/S, Denmark</i>	
3.1	Introduction	43
3.2	Traditional sources and processes for industrial enzyme production	44
3.3	Design of expression systems for industrial enzyme production	46
3.4	Development of an enzyme production process	54
3.5	Future trends	56
3.6	Sources of further information and advice	56
3.7	References	57
4	Immobilized enzyme technology for food applications	60
	<i>Marie K. Walsh, Utah State University, USA</i>	
4.1	Introduction	60
4.2	Immobilized enzyme technology for modification of acylglycerols	62
4.3	Immobilized enzyme technology for modification of carbohydrates.....	68
4.4	Immobilized enzyme technology protein modification	73
4.5	Immobilized enzyme technology for production of flavor compounds.....	75
4.6	Future trends	77
4.7	References	78
5	Consumer attitudes towards novel enzyme technologies in food processing	85
	<i>Helle Søndergaard, Klaus G. Grunert and Joachim Scholderer, MAPP, University of Aarhus, Denmark</i>	
5.1	Introduction	85
5.2	Theoretical approaches to how consumers form attitudes to new food production technologies	86
5.3	Studies of consumer attitudes to enzyme technologies	88
5.4	Implications of consumer attitudes to enzyme technologies.....	94
5.5	Future trends	95
5.6	Sources of further information and advice	95
5.7	Acknowledgements	96
5.8	References	96

Part II Novel enzyme technology for food applications

6 Using crosslinking enzymes to improve textural and other properties of food	101
<i>Johanna Buchert, Emilia Selinheimo, Kristiina Kruus, Maija-Liisa Mattinen, Raija Lantto and Karin Autio, VTT, Finland</i>	
6.1 Introduction	101
6.2 Types of crosslinking enzymes	103
6.3 Application of crosslinking enzymes in baking and pasta manufacture	109
6.4 Application of crosslinking enzymes in meat and fish processing	114
6.5 Application of crosslinking enzymes in dairy applications	118
6.6 Other applications of crosslinking enzymes in food manufacture	122
6.7 Analysing the chemistry of crosslinks formed by enzymes	122
6.8 Effect of biopolymer crosslinking on nutritional properties of food	124
6.9 Conclusions	126
6.10 References	126
7 Enzymatically modified whey protein and other protein-based fat replacers	140
<i>Jacek Leman, University of Warmia and Mazury in Olsztyn, Poland</i>	
7.1 Introduction	140
7.2 Enhancing the fat mimicking properties of proteins	142
7.3 Applications in low-fat foods	149
7.4 Future trends	152
7.5 References	153
8 Enzymatic production of bioactive peptides from milk and whey proteins	160
<i>Paola A. Ortiz-Chao and Paula Jauregi, University of Reading, UK</i>	
8.1 Introduction	160
8.2 Angiotensin I-converting enzyme inhibitory peptides	161
8.3 Other bioactive peptides and their health benefits	165
8.4 Production of bioactive peptides from milk and whey proteins	170
8.5 Future trends	177
8.6 Sources of further information and advice	177
8.7 References	177

9 Production of flavours, flavour enhancers and other protein-based speciality products	183
<i>Stuart West, Biocatalysts Ltd, UK</i>	
9.1 Introduction	183
9.2 Production and usage of monosodium glutamate (MSG)	186
9.3 Chondroitin sulphate	188
9.4 Production of aspartame	190
9.5 Enzymes for vanilla extraction	191
9.6 Enzyme modified cheese as a flavour ingredient	193
9.7 Enzymes used in savoury flavouring	198
9.8 Enzymes used in yeast extract manufacture	199
9.9 Future trends	200
9.10 Sources of further information and advice	202
9.11 References	203
10 Applications of cold-adapted proteases in the food industry	205
<i>A. Guðmundsdóttir and J. Bjarnason, University of Iceland, Iceland</i>	
10.1 Introduction	205
10.2 Use of proteolytic enzymes in food processing	208
10.3 Application of cold-adapted serine proteases in food processing	209
10.4 Modifying marine proteases for industrial use	211
10.5 Future trends	212
10.6 References	212
11 Health-functional carbohydrates: properties and enzymatic manufacture	215
<i>Simon Hughes and Robert A. Rastall, University of Reading, UK</i>	
11.1 Introduction	215
11.2 Dietary fibre	215
11.3 Prebiotics	217
11.4 Inulin	219
11.5 Transgalacto-oligosaccharides	222
11.6 Gluco-oligosaccharides	223
11.7 Alternansucrase-maltose acceptor oligosaccharides	224
11.8 Resistant starch	226
11.9 Arabinoxylan	228
11.10 Oligosaccharides from non-starch polysaccharides	230
11.11 Pectins	232
11.12 Oligodextran	234
11.13 Conclusion	237
11.14 References	237

12 Flavorings and other value-added products from sucrose	243
<i>Gregory L. Côté, United States Department of Agriculture, USA</i>	
12.1 Introduction	243
12.2 Di- and oligosaccharides from sucrose	244
12.3 Polysaccharides from sucrose	257
12.4 Other products	260
12.5 Future trends	261
12.6 Sources of further information and advice	262
12.7 References	262
13 Production of structured lipids with functional health benefits	270
<i>Xuebing Xu, Janni B. Kristensen and Hong Zhang, BioCentrum-DTU, Technical University of Denmark, Denmark</i>	
13.1 Introduction	270
13.2 Production of diglyceride oils	271
13.3 Production of healthy oils containing medium chain fatty acids	278
13.4 Future trends	282
13.5 Acknowledgements	282
13.6 References	282
14 Lipase-catalyzed harvesting and/or enrichment of industrially and nutritionally important fatty acids	285
<i>George J. Piazza and Thomas A. Foglia, US Department of Agriculture, USA; and Xuebing Xu, BioCentrum-DTU, Technical University of Denmark, Denmark</i>	
14.1 Introduction	285
14.2 Lipase selectivity	286
14.3 Fatty acid harvesting	294
14.4 Structured triacylglycerols	295
14.5 Single reaction step process for the production of STAG	301
14.6 Multiple reaction step processes for the production of STAG	307
14.7 Nutritional and other uses of structured lipids	307
14.8 Summary and future trends	308
14.9 References	309
Index	315
