Chapter 1 Sintering of Ceramics: Fundamentals 1

1.1 Introduction 1
1.2 The Sintering Process 1
1.2.1 Characterization of Sintering 3
1.2.2 Approach to Sintering 3
1.3 Driving Force for Sintering 4
1.3.1 Surface Curvature 5
1.3.2 Applied Pressure 6
1.3.3 Chemical Reaction 6
1.4 Defects in Crystalline Solids 6
1.4.1 Point Defects and Defect Chemistry 7
1.4.2 Kroger–Vink Notation 8
1.4.3 Defect Reactions 8
1.4.4 Defect Concentration 9
1.4.5 Intrinsic Defects 11
1.4.5.1 Schottky Defect 11
1.4.5.2 Frenkel Defect 12
1.4.6 Extrinsic Defects 13
1.4.6.1 Nonstoichiometry 14
1.4.6.2 Influence of Solutes 15
1.4.6.3 Brouwer Diagram 16
1.4.7 Defect Chemistry and Sintering 18
1.5 Diffusion in Crystalline Solids 19
1.5.1 Diffusion Equations 19
1.5.1.1 Solutions of the Diffusion Equation 21
1.5.2 Atomistic Diffusion Processes 22
1.5.3 Mechanisms of Diffusion 26
1.5.3.1 Lattice Diffusion 26
1.5.3.2 Grain Boundary Diffusion 27
1.5.3.3 Surface Diffusion 28
1.5.3.4 Trends in Diffusion Coefficients 28
1.5.4 Types of Diffusion Coefficients 28
1.6 The Chemical Potential 29
1.6.1 Chemical Potential of a Mixture of Gases 30
1.6.2 Chemical Potential of Solids and Liquids 31
1.6.3 Chemical Potential of Atoms and Vacancies in a Crystal 31
1.6.4 Chemical Potential of Atoms and Vacancies beneath a Curved Surface 32
1.6.5 Equilibrium Vacancy Concentration beneath a Curved Surface 34
1.6.6 Vapor Pressure over a Curved Surface 35
1.7 Diffusional Flux Equations 36

1.7.1 Flux of Atoms 36
1.7.2 Flux of Vacancies 37
1.8 Diffusion in Ionic Crystals: Ambipolar Diffusion 37
1.9 Concluding Remarks 41
Problems 41
References 43

Chapter 2 Solid-State and Viscous Sintering 45

2.1 Introduction 45
2.2 Mechanisms of Sintering 46
2.3 Effects of Grain Boundaries 48
2.4 Theoretical Analysis of Sintering 50
2.5 Herring's Scaling Law 51
2.5.1 Derivation of the Scaling Law 51
2.5.1.1 Scaling Law for Lattice Diffusion 52
2.5.2 Application and Limitation of the Scaling Law 53
2.5.2.1 Relative Rates of Sintering Mechanisms 53
2.5.2.2 Limitation of the Scaling Law 54
2.6 Analytical Models 55
2.6.1 Stages of Sintering 55
2.6.1.1 Initial Stage 56
2.6.1.2 Intermediate Stage 56
2.6.1.3 Final Stage 56
2.6.2 Modeling the Sintering Process 57
2.6.3 Initial Stage Models 57
2.6.3.1 Geometrical Model 57
2.6.3.2 Kinetic Equations 58
2.6.3.3 Summary of the Initial Stage Sintering Equations 61
2.6.3.4 Limitations of the Initial Stage Sintering Equations 62
2.6.4 Intermediate Stage Models 63
2.6.4.1 Geometrical Model for Solid-State Sintering 64
2.6.4.2 Mechanisms 64
2.6.4.3 Sintering Equations 64
2.6.4.4 Geometrical Model for Viscous Sintering 68
2.6.5 Final Stage Models 70
2.6.5.1 Geometrical Model for Solid-State Sintering 70
2.6.5.2 Sintering Equations 71
2.6.5.3 Geometrical Model for Viscous Sintering 72
2.6.6 Limitations of the Analytical Models 73
2.7 Numerical Simulation of Sintering 73
2.7.1 Numerical Simulation of Solid-State Sintering 74
2.7.2 Numerical Simulation of Viscous Sintering 76
2.8 Phenomenological Sintering Equations 78
2.9 Sintering Diagrams 79
2.9.1 Construction of the Diagrams 80
2.9.2 Limitations of the Diagrams 81
2.10 Sintering with an Externally Applied Pressure 81
2.10.1 Hot Pressing 81
2.10.1.1 Hot Pressing Models 81
2.10.1.2 Densification Rate in Hot Pressing 84
2.10.1.3 Hot Pressing Mechanisms 85

2.10.2 Sinter Forging 88
2.10.3 Hot Isostatic Pressing 88
2.11 Stress Intensification Factor and Sintering Stress 89
2.11.1 Stress Intensification Factor 89
2.11.2 Sintering Stress 91
2.11.3 Measurement of the Sintering Stress and Stress Intensification Factor 93
2.11.3.1 Zero-Creep Technique 93
2.11.3.2 Loading Dilatometry 93
2.11.3.3 Sinter Forging Technique 96
2.12 Alternative Derivation of the Sintering Equations 97
2.12.1 General Isothermal Sintering Equation 100
2.12.2 General Isothermal Creep Equation for Porous Solids 100
2.13 Concluding Remarks 101
Problems 101
References 102

Chapter 3 Grain Growth and Microstructure Control 105

3.1 Introduction 105
3.2 General Features of Grain Growth 106
3.2.1 Grain Growth and Coarsening 106
3.2.2 Occurrence of Grain Growth 106
3.2.3 Driving Force for Grain Growth 107
3.2.4 Normal and Abnormal Grain Growth 107
3.2.5 Importance of Controlling Grain Growth 108
3.2.5.1 Effect of Grain Size on Properties 108
3.2.5.2 Attainment of High Density 110
3.3 Ostwald Ripening 110
3.3.1 The LSW Theory 112
3.3.1.1 Ostwald Ripening Controlled by the Interface Reaction 112
3.3.1.2 Ostwald Ripening Controlled by Diffusion 114
3.3.2 Modifications to the LSW Theory 115
3.3.3 Time-Dependent Ostwald Ripening 117
3.4 Topological and Interfacial Tension Requirements 117
3.5 Normal Grain Growth in Dense Solids 119
3.5.1 The Model of Burke and Turnbull 119
3.5.2 Mean Field Theories 121
3.5.3 Topological Analysis of Grain Growth 123
3.5.4 Computer Simulation of Normal Grain Growth 125
3.6 Abnormal Grain Growth in Dense Solids 127
3.6.1 Causes of Abnormal Grain Growth 128
3.6.2 Application of Controlled Abnormal Grain Growth 131
3.7 Grain Growth in Thin Films 133
3.8 Mechanisms Controlling the Boundary Mobility 135
3.8.1 Pinning by Fine Second-Phase Particles 135
3.8.1.1 The Zener Model 137
3.8.1.2 Computer Simulations of Particle-Inhibited Grain Growth 138
3.8.1.3 Comparison with Experimental Results 140
3.8.2 Solute Drag 141
3.9 Grain Growth and Pore Evolution in Porous Solids 144
3.9.1 Pore Evolution during Sintering 146
3.9.2 Thermodynamic Analysis of Pore Shrinkage 148

3.9.3 Kinetics and Mechanisms of Grain Growth in Porous Solids 152
3.9.4 Grain Growth in Very Porous Solids 152
3.9.5 Grain Growth in Less Porous Solids 156
3.9.5.1 Pore Mobility 156
3.9.5.2 Kinetics of Pore–Boundary Interactions 159
3.9.5.3 Grain Growth Kinetics 160
3.10 Simultaneous Densification and Grain Growth 160
3.10.1 Microstructural Maps 162
3.10.1.1 Brook Model 162
3.10.1.2 Yan, Cannon, and Chowdhry Model 165
3.10.2 Computer Simulations of Microstructural Evolution 168
3.11 Fabrication Principles for Ceramics with Controlled Microstructure 168
3.12 Concluding Remarks 171
Problems 171
References 172

Chapter 4 Liquid-Phase Sintering 177

4.1 Introduction 177
4.2 Elementary Features of Liquid-Phase Sintering 178
4.2.1 Enhancement of Densification 178
4.2.2 Driving Force for Densification 179
4.2.3 Formation of the Liquid Phase 179
4.2.4 Microstructures 179
4.3 Stages of Liquid-Phase Sintering 180
4.4 Thermodynamic and Kinetic Factors 182
4.4.1 Wetting and Spreading of the Liquid 182
4.4.2 Dihedral Angle 184
4.4.2.1 Liquid Penetration of the Grain Boundary 185
4.4.2.2 Shape of the Liquid and the Grains 186
4.4.3 Effect of Solubility 187
4.4.4 Capillary Forces 187
4.4.5 Effect of Gravity 191
4.5 Grain Boundary Films 192
4.6 The Basic Mechanisms of Liquid-Phase Sintering 196
4.6.1 Stage 1: Rearrangement and Liquid Redistribution 197
4.6.1.1 Liquid Redistribution 197
4.6.1.2 Particle Rearrangement 200
4.6.2 Stage 2: Solution-Precipitation 202
4.6.2.1 Densification by Contact Flattening 203
4.6.2.2 Densification Accompanied by Ostwald Ripening 205
4.6.2.3 Assessment of the Densification Models 206
4.6.2.4 Grain Shape Accommodation 206
4.6.2.5 Coalescence 208
4.6.3 Stage 3: Ostwald Ripening 209
4.6.3.1 Densification by Pore Filling 209
4.6.3.2 Microstructural Coarsening 211
4.7 Numerical Modeling of Liquid-Phase Sintering 214
4.8 Hot Pressing with a Liquid Phase 215
4.9 Use of Phase Diagrams in Liquid-Phase Sintering 215
4.9.1 Zinc Oxide 216
4.9.2 Silicon Nitride 217

4.10 Activated Sintering 220
4.11 Vitrification 221
4.11.1 The Controlling Parameters 222
4.11.2 Vitrification of Silicate Systems 223
4.12 Concluding Remarks 224
Problems 226
References 227

Chapter 5 Special Topics in Sintering 231

5.1 Introduction 231
5.2 Inhomogeneities and Their Effects on Sintering 232
5.2.1 Differential Densification 232
5.2.2 Control of Inhomogeneities 234
5.2.3 Correction of Inhomogeneities 234
5.2.4 Shrinkage of Large Pores 236
5.3 Constrained Sintering I: Rigid Inclusions 240
5.3.1 Volume Fraction of Inclusions 241
5.3.2 Densification Rate of the Composite and the Matrix 242
5.3.3 The Rule of Mixtures 242
5.3.4 Transient Stresses during Sintering 244
5.3.4.1 Composite Sphere Model 244
5.3.4.2 Stress Components 245
5.3.4.3 Effect of Transient Stresses on Sintering 246
5.3.4.4 Calculation of Transient Stresses and Strain Rates 247
5.3.5 Percolation and Network Formation 251
5.3.5.1 The Concept of Percolation 253
5.3.5.2 Effect of Percolation on Sintering 254
5.3.5.3 Numerical Simulations 254
5.3.6 Factors Influencing the Sintering of Ceramic Composites 255
5.4 Constrained Sintering II: Adherent Thin Films 258
5.4.1 Models for Constrained Sintering of Thin Films 258
5.4.2 Experimental Observations of Sintering of Thin Films 260
5.4.3 Crack Growth and Damage in Constrained Sintering of Films 262
5.5 Constrained Sintering III: Multilayers 264
5.6 Constitutive Models for Porous Sintering Materials 265
5.7 Morphological Stability of Continuous Phases 266
5.7.1 Rayleigh Instability and Microstructural Evolution 267
5.7.2 Morphological Stability of Thin Films 269
5.8 Solid Solution Additives and the Sintering of Ceramics 272
5.8.1 Effect of Additives on Kinetic Factors 273
5.8.2 Effect of Additives on Thermodynamic Factors 274
5.8.3 Segregation of Additives 275
5.8.3.1 Elastic Strain Energy 275
5.8.3.2 Electrostatic Interaction and the Space Charge Concept 276
5.8.4 The Role of MgO in Al_2O_3 280
5.9 Sintering with Chemical Reaction: Reaction Sintering 282
5.9.1 Influence of Process Variables 284
5.9.1.1 Particle Size of Reacting Powders 284
5.9.1.2 Sintering Temperature 284
5.9.1.3 Applied Pressure 285

5.9.1.4 Processing Trajectories in Reaction Sintering 285
5.9.2 Experimental Observations of Reaction Sintering 286
5.10 Viscous Sintering with Crystallization 289
5.10.1 Effect of Process Variables 290
5.10.1.1 Viscosity 290
5.10.1.2 Pore Size 290
5.10.1.3 Applied Pressure 291
5.10.1.4 Heating Rate 291
5.10.2 Analysis of Viscous Sintering with Crystallization 291
5.10.2.1 TTT Diagrams 291
5.10.2.2 Analysis in Terms of Sintering with Rigid Inclusions 294
5.10.3 Experimental Observations of Sintering with Crystallization 296
5.11 Concluding Remarks 297
Problems 297
References 298

Chapter 6 Sintering Process Variables and Sintering Practice 305

6.1 Introduction 305
6.2 Sintering Measurement Techniques 305
6.2.1 Furnaces 306
6.2.2 Shrinkage and Density 307
6.2.3 Grain Size 309
6.3 Conventional Sintering 309
6.3.1 Particle and Green Compact Effects 310
6.3.1.1 Particle Size 310
6.3.1.2 Particle Size Distribution 310
6.3.1.3 Particle Shape and Particle Structure 311
6.3.1.4 Particle Packing 312
6.3.1.5 Effect of Green Density 314
6.3.2 Anisotropic Sintering Shrinkage 315
6.3.2.1 Pore Shape Anisotropy 315
6.3.2.2 Particle Alignment 318
6.3.3 Heating Schedule 320
6.3.3.1 Stage 1: Binder Burnout 321
6.3.3.2 Stage 2: Low-Temperature Soak 321
6.3.3.3 Stage 3: Heat-Up to the Sintering Temperature 321
6.3.3.4 Stage 4: Isothermal Sintering 321
6.3.3.5 Stage 5: Annealing 322
6.3.3.6 Stage 6: Cool-Down to Room Temperature 322
6.3.3.7 Isothermal Sintering 322
6.3.3.8 Constant Heating Rate Sintering 323
6.3.3.9 Effect of Heating Rate on Sintering 323
6.3.3.10 Master Sintering Curve 329
6.3.3.11 Multistage Sintering 330
6.3.3.12 Fast Firing 332
6.3.3.13 Rate-Controlled Sintering 333
6.3.4 Sintering Atmosphere 334
6.3.4.1 Gases in Pores 334
6.3.4.2 Vapor Transport 338

6.3.4.3 Water Vapor in the Sintering Atmosphere 338
6.3.4.4 Volatilization and Decomposition 340
6.3.4.5 Oxidation Number 342
6.3.4.6 Defect Chemistry and Stoichiometry 346
6.3.5 Production of Controlled Sintering Atmospheres 346
6.4 Microwave Sintering 348
6.4.1 Interaction of Microwaves with Matter 349
6.4.2 Microwave Sintering Techniques 352
6.4.3 Microwave Sintering of Ceramics 353
6.4.4 Plasma Sintering 355
6.4.5 Plasma-Assisted Sintering 356
6.5 Pressure-Assisted Sintering 357
6.5.1 Hot Pressing 357
6.5.1.1 Hot Pressing Process Variables 359
6.5.1.2 Analysis of Hot Pressing Data 359
6.5.1.3 Reactive Hot Pressing 360
6.5.2 Sinter Forging 361
6.5.3 Hot Isostatic Pressing 361
6.5.3.1 Hot Isostatic Pressing: Process Variables 363
6.6 Concluding Remarks 364
Problems 365
References 366

Appendix A
Physical Constants 371

Appendix B
SI Units—Names and Symbols 373

Appendix C
Conversion of Units 375

Appendix D
Ionic Crystal Radii (in units of 10^{-10} m) 377

Appendix E
Density and Melting Point of Some Elements and Ceramics 379

Index 383
