Preface . . . . . *ix*

Introduction . . . . . *xi*

Chapter One: Basic Switching Circuits *1*

Energy Storage Basics 3
Buck Converter 4
Boost Converter 6
Inverting Boost Converter 9
Buck-Boost Converter 10
Transformer Isolated Converters 11
Synchronous Rectification 16
Charge Pumps 17

Chapter Two: Control Circuits *21*

Basic Control Circuits 23
The Error Amplifier 26
Error Amplifier Compensation 28
A Representative Voltage Mode PWM Controller 33
Current Mode Control 39
A Representative Current Mode PWM Controller 41
Charge Pump Circuits 45
Multiple Phase PWM Controllers 49
Resonant Mode Controllers 50

Chapter Three: The Input Power Supply *51*

Off-Line Operation 53
Radio Interference Suppression 55
Safety Agency Issues 57
Power Factor Correction 60
In-Rush Current 64

Hold-Up Time 66
Input Rectifier Considerations 69
Input Reservoir Capacitor Characteristics 70

Chapter Four: Non-Isolated Circuits. 73
General Design Method 75
Buck Converter Designs 76
Boost Converter Designs 86
Inverting Designs 94
Step Up/Step Down (Buck/Boost) Designs 97
Charge Pump Designs 102
Layout Considerations 107

Chapter Five: Transformer-Isolated Circuits 111
Feedback Mechanisms 113
Flyback Circuits 121
Practical Flyback Circuit Design 129
Off-Line Flyback Example 129
Non-Isolated Flyback Example 137
Forward Converter Circuits 141
Practical Forward Converter Design 143
Off-Line Forward Converter Example 144
Non-Isolated Forward Converter Example 148
Push-Pull Circuits 152
Practical Push-Pull Circuit Design 154
Half Bridge Circuits 158
Practical Half Bridge Circuit Design 161
Full Bridge Circuits 164

Chapter Six: Passive Component Selection 167
Capacitor Characteristics 169
Aluminum Electrolytic Capacitors 171
Solid Tantalum and Niobium Capacitors 173
Solid Polymer Electrolytic Capacitors 175
Multilayer Ceramic Capacitors 176
Film Capacitors 180

Resistor Characteristics 181
Carbon Composition Resistors 183
Film Resistors 183
Wire Resistors 184

Chapter Seven: Semiconductor Selection 187
Diode Characteristics 189
Junction Diodes 189
Schottky Diodes 194
Passivation 197
Bipolar Transistors 197
Power MOSFETs 204
Gate Drive 208
Safe Operating Area and Avalanche Rating 219
Synchronous Rectification 222
Sense FETs 229
Package Options 229
IGBT Devices 230

Chapter Eight: Inductor Selection 235
Properties of Real Inductors 237
Core Properties 240
Designing a Powder Toroid Choke Core 250
Choosing a Boost Converter Core 256

Chapter Nine: Transformer Selection 261
Transformer Properties 263
Safety Concerns 266
Practical Construction Considerations 267
Choosing a Forward Converter Transformer Core 271
Practical Flyback Core Considerations 272
Choosing a Flyback Converter "Transformer" Core 273

Chapter Ten: A "True Sine Wave" Inverter Design Example 277
Design Requirements 279
Design Description 280
Preregulator Detailed Design 286

Output Converter Detailed Design 290
H Bridge Detailed Design 293
Bridge Drive Detailed Design 296

Chapter Eleven: A PC Off-Line Supply 299

Setting Requirements 301
The Input Supply 302
DC–DC Converter 305
Diode Selection 309
Inductor Designs 310
Capacitor Designs 314
Transformer Design 315

Index 319
