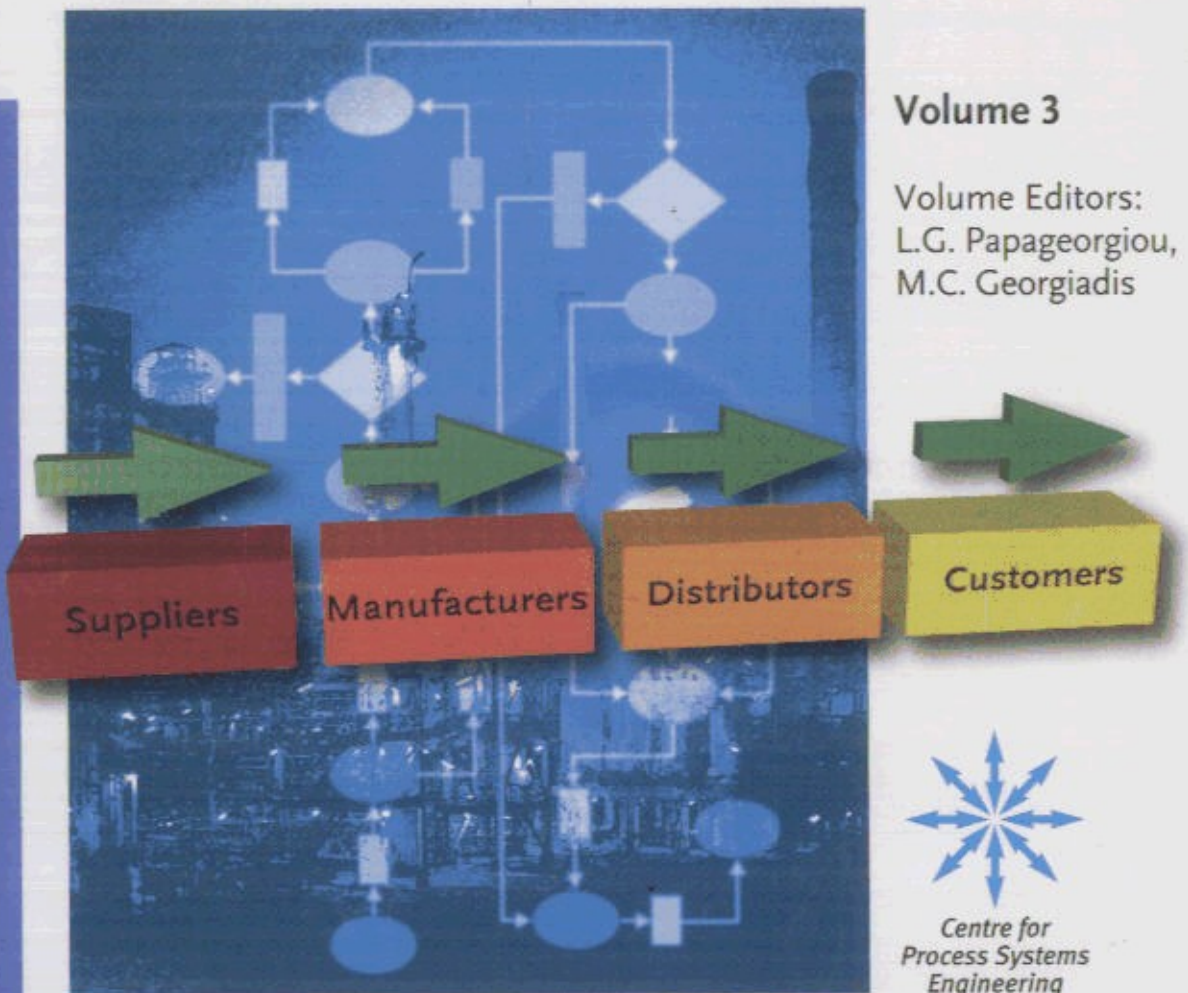
Process Systems Engineering

Edited by Efstratios N. Pistikopoulos,
Michael C. Georgiadis, and Vivek Dua

WILEY-VCH

Supply Chain Optimization

Part I



Volume 3

Volume Editors:
L.G. Papageorgiou,
M.C. Georgiadis

Centre for
Process Systems
Engineering

Contents

Preface – Volume 3: Supply Chain Optimization *XIII*
List of Authors *XVII*

1 Bridging the Gap Between Production, Finances, and Risk in Supply Chain Optimization *1*
L. Puigjaner and G. Guillén-Gosálbez
1.1 Introduction *1*
1.2 Merging Process Operations and Finances: A Literature Review *1*
1.3 Integrated Models for Tactical and Strategic Decisions in SCM *4*
1.3.1 Financial Formulation: How Can we Take Optimal Financial Decisions? *4*
1.3.1.1 Budgeting Model *5*
1.3.1.2 Objective Functions *8*
1.3.2 Design – Planning Formulation *11*
1.3.2.1 Mass Balance Constraints *11*
1.3.2.2 Capacity and Facilities Location Constraints *12*
1.3.3 Integration Between Models *13*
1.3.4 Case Study *15*
1.4 SCM Under Uncertainty *28*
1.4.1 Mathematical Formulation *29*
1.4.1.1 Mass Balance Constraints *30*
1.4.1.2 Capacity and Facilities Location Constraints *31*
1.4.1.3 Objective Function Net Present Value (NPV) *31*
1.4.2 Risk Management in SCM *31*
1.4.2.1 Financial Risk *32*
1.4.2.2 Downside Risk *34*
1.4.2.3 Worst Case *35*
1.4.3 Multiobjective Problem *35*
1.4.4 Case Study *36*
1.5 Conclusions *38*

Supply Chain Optimization. Part I. Edited by Lazaros G. Papageorgiou and Michael C. Georgiadis

ISBN: 978-3-527-31693-9

2 Multiagent Framework for Modeling and Design of Supply Chain Networks *45*
L. Puigjaner, G. Guillén-Gosálbez and F. D. Mele
2.1 Introduction *45*
2.2 A Discrete Event Simulator for SCM *46*
2.2.1 Simulation Model *46*
2.2.2 The Demand Model *49*
2.2.3 The Inventory Model *49*
2.3 A Multiagent System for SCM *50*
2.3.1 The Site Agent *53*
2.3.2 The Sales Subagent *54*
2.3.3 The Inventory Subagent *56*
2.3.4 The Production Subagent *58*
2.3.5 The Purchasing Subagent *59*
2.3.6 The Transportation Subagent *61*
2.4 Novel Business Aspects in SCM *62*
2.4.1 Environmental Impact *62*
2.4.1.1 The Environmental Module *63*
2.4.2 Financial Concerns *67*
2.4.2.1 Implementation: Financial Module *67*
2.5 Multiagent System: Integrated Framework *68*
2.6 Case Study *71*
2.6.1 Objectives *78*
2.6.2 Results *79*
2.7 Concluding Remarks and Future Work *83*

3 Environmentally Conscious Supply Chain Management *87*
M. Türkay
3.1 Introduction *87*
3.2 Closed-Loop Supply Chains *90*
3.3 Environmentally Conscious Production *91*
3.3.1 Process Models for Energy Production Systems *92*
3.3.1.1 Boiler Models and Use of Biofuels *93*
3.3.1.2 Turbine Models *94*
3.3.1.3 Fuel Tank Models *94*
3.3.1.4 Mixer Models *95*
3.3.1.5 Environmental Considerations *95*
3.3.1.6 Material Balance *96*
3.3.1.7 Electricity Purchase *96*
3.3.1.8 Operating and Startup Costs *96*
3.3.1.9 Carbon Capture and Sequestering (CCS) Systems *96*
3.3.1.10 Objective Functions *98*
3.3.1.11 Illustrative Example *98*
3.4 Sustainable Transportation *100*

3.4.1 Intermodal Transportation *101*
3.5 Conclusions *103*

4 Optimal Design and Operational Planning of Responsive Process Supply Chains *107*
F. You and I. E. Grossmann
4.1 Introduction *107*
4.2 Literature Review *108*
4.3 Motivating Example *110*
4.4 Problem Statement *111*
4.5 Model *114*
4.5.1 Network Structure Constraints *114*
4.5.1.1 Supplier: Plant Site *114*
4.5.1.2 Plant Site: Customer *115*
4.5.1.3 Input and Output of a Plant *115*
4.5.2 Operational Planning Constraints *117*
4.5.2.1 Production Constraints *117*
4.5.2.2 Sale Constraints *117*
4.5.2.3 Upper Bound Constraints *117*
4.5.2.4 Mass Balance Constraints *118*
4.5.3 Cyclic Scheduling Constraints *118*
4.5.3.1 Assignment Constraints *119*
4.5.3.2 Sequence Constraints *119*
4.5.3.3 Production Constraints *120*
4.5.3.4 Timing Constraints *120*
4.5.3.5 Cost Constraints *121*
4.5.3.6 Upper Bound Constraints *121*
4.5.4 Lead Time Definition *122*
4.5.5 Nonnegative Constraints *125*
4.5.6 Net Present Value *125*
4.5.7 Solution Procedure *125*
4.6 Numerical Example *126*
4.7 Conclusions *128*

5 Reverse Production Systems – Optimization Modeling to Support Supply Chains for Product Recovery *135*
T. Assavapokee, M. J. Realff and J. C. Ammons
5.1 Introduction *135*
5.2 Literature Review of Reverse Product System Modeling *136*
5.3 Carpet and Carpet Recycling *137*
5.4 Model Description *138*
5.4.1 Objective Function *139*
5.4.2 Mathematical Formulation *140*

5.5 Case Study Data and Scenarios *143*
5.6 Results and Discussion *146*
5.7 Conclusions *150*

6 Optimal Design of Supply Chain Networks using Mathematical Programming *157*
P. Tsiakis, L. G. Papageorgiou and M. C. Georgiadis
6.1 Introduction *157*
6.2 Optimal Design of Production and Distribution Network *161*
6.2.1 Notation *163*
6.2.2 Mathematical Formulation of Deterministic Problem *163*
6.2.2.1 Network Structure Constraints *163*
6.2.2.2 Logical Constraints for Transportation Flows *164*
6.2.2.3 Material Balances *164*
6.2.2.4 Production Constraints *164*
6.2.2.5 Capacity of Distribution Centers *165*
6.2.2.6 Objective Function *166*
6.3 Distribution Center Location Case Study *168*
6.3.1 Problem Description and Data Analysis *169*
6.3.2 Production *169*
6.3.3 Warehousing *170*
6.3.4 Transportation *171*
6.3.5 Demand *171*
6.3.6 Results – Network Description *172*
6.3.7 Comments *173*
6.4 Optimal Production Allocation and Distribution Supply Chain Networks *174*
6.4.1 Problem Description – Data Analysis *175*
6.4.1.1 Production Plants *175*
6.4.1.2 Distribution Centers *175*
6.4.1.3 Customer Zones *176*
6.4.2 Network Optimization – Base Scenario *178*
6.4.3 Fixed Product Allocation and Customer Assignment Scenario *180*
6.4.4 Results Analysis *182*
6.4.5 Comments *182*
6.5 Conclusions *183*

7 Design and Planning of Closed-Loop Supply Chains *187*
A. P. Barbosa-Póvoa, M. I. Gomes Salema and A. Q. Novais
7.1 Introduction *187*
7.2 Reverse Logistics *188*
7.2.1 Defining the Closed-Loop Supply Chain *189*
7.3 Literature Review *191*

7.3.1 Forward Supply Chain Models *192*
7.3.2 Reverse Supply Chain Models *193*
7.3.3 Closed-Loop Supply Chain Models *195*
7.3.4 Research Agenda *197*
7.4 Closed-Loop Supply Chains Modeling *198*
7.4.1 Problem Description *198*
7.4.2 Time Modeling *200*
7.4.3 Model Formulation *201*
7.4.3.1 Constraints *202*
7.4.4 European Case *207*
7.4.4.1 Results *208*
7.5 Conclusions *212*

8 Combining Strategic Design *and* Operative Planning in the Process Industry *219*
J. Kallrath
8.1 Introduction *219*
8.2 Combined Strategic and Operative Planning *222*
8.2.1 Operative Planning *222*
8.2.2 Multisite Design and Strategic Planning *223*
8.2.2.1 The Need for Exact Optimization in Design Optimization *224*
8.2.2.2 Design Planning under Uncertainty *226*
8.2.3 Combined Approach: Design and Operative Planning *228*
8.2.3.1 Motivation for the Combined Approach *228*
8.2.3.2 The Choice of the Objective Function *229*
8.2.3.3 Time Horizon and Time Resolution *230*
8.2.3.4 Design Planning, Operative Planning, and Scheduling *230*
8.2.4 The Need for an Integrated Tailor-Made Approach *230*
8.2.4.1 Solution Approach *231*
8.2.4.2 Software Design Issues *233*
8.2.4.3 Limits of the Approach *233*
8.3 Combined Strategic and Operative Planning – Commercial Software versus Individual Models *234*
8.3.1 Commercial Software for Operative Planning and Design Planning *234*
8.3.2 The Role of Individual Software for the CSOP Approach and APS *236*
8.3.3 When to Select Individual Tailor-Made Methods? *236*
8.3.4 Developing and Maintenance Costs of the Inhouse Model *238*
8.3.5 Dependences on Software Providers or Inhouse Modeling Specialists? *239*
8.4 Summary *239*

9 Chemical Supply Chain Redesign *245*
P. K. Naraharisetti, I. A. Karimi and R. Srinivasan
9.1 Introduction *245*
9.2 Chemical Supply Chains *247*
9.3 Capacity Management *249*
9.3.1 Operations Management *250*
9.3.2 Factors Influencing Investment Decisions *251*
9.4 Supply-Chain Redesign *252*
9.4.1 Nonmathematical Models *252*
9.4.1.1 Strategic Planning *253*
9.4.1.2 Tactical Planning *256*
9.4.1.3 Operational Planning *257*
9.4.2 Mathematical Models *258*
9.4.2.1 Strategic Planning *258*
9.4.2.2 Tactical Planning *259*
9.4.2.3 Contracts for Material Supply *259*
9.4.2.4 Remarks *259*
9.4.3 This Chapter *260*
9.5 Problem Description *261*
9.5.1 Problem Statement *264*
9.6 Problem Formulation *265*
9.6.1 Capacity Change *265*
9.6.2 Capacity Utilization *267*
9.6.3 Material Balance *269*
9.6.4 Supply Contracts *271*
9.6.5 Loans and Bonds *272*
9.6.6 Costs and Incomes *272*
9.6.7 Remarks *276*
9.7 Example *276*
9.7.1 Results and Discussion *281*
9.7.2 Future Work *291*
9.8 Conclusion *292*

10 A Hybrid Tabu-Branch and Bound Approach for the Solution of Large-Scale Supply Chain Management Models *301*
J. M. Natali, P. Chen and J. M. Pinto
10.1 Introduction *301*
10.2 Problem Statement *303*
10.2.1 Mathematical Structure of the CFPN Model *304*
10.2.2 Preliminary Analysis of the CFPN Model Solution Approaches *304*
10.3 Hybrid Tabu Search Procedure *305*
10.3.1 Mixed Integer Linear Relaxation *306*
10.3.2 Algorithmic Description *308*
10.3.2.1 Unrestricted Fractional Solutions *309*

10.3.2.2 Restricted Fractional Solutions *310*
10.3.2.3 Tabu Search Guidance *310*
10.3.3 General Algorithm *311*
10.4 Results and Discussion *313*
10.4.1 Algorithmic Analysis *314*
10.4.2 Comparison to Full-scale Results *316*
10.5 Conclusions *319*

11 Enhancement of Oil and Gas Production via Network Optimization *325*
N. Thijssen, K.-J. Li and I. Mittendorff
11.1 Introduction *326*
11.2 Integrated Network Analysis *327*
11.3 High-Level Network Model *328*
11.3.1 Supply Module *328*
11.3.2 Production Module *329*
11.3.2.1 Separators *329*
11.3.2.2 Compressors *331*
11.3.2.3 Pumps *331*
11.3.3 Pipelines Module *332*
11.3.4 Demand Module *333*
11.4 Workflow *333*
11.5 Results *335*
11.6 Conclusions *337*

Index *339*
