Cancer

From Mechanisms to Therapeutic Approaches

Contents

Preface	vii
Color Plates	xiii
Part I Molecular Mechanisms	1
1 Molecular Oncology <i>Miguel H. Bronchud</i>	3
2 Oncogenes <i>Zhong-Zong Pan and Andrew K. Godwin</i>	55
3 Epigenetic Mechanisms in Tumorigenesis <i>Maureen K. Bunger and Trevor K. Archer</i>	115
4 Intracellular Signaling in Cancer <i>Chittam U. Thakore, Brian D. Lehmann, James A. McCubrey, and David M. Terrian</i>	155
5 Immunology of Cancer <i>Peter R. Holman and Edward D. Ball</i>	191
6 Cancer Stem Cells <i>Michael F. Clarke and Andrew T. Hass</i>	209
Part II Organ Specific Cancers	231
7 Genetics and Molecular Biology of Lung Cancer <i>Jack A. Roth</i>	233
8 Cancer of the Prostate: Molecular Genetics <i>Rajvir Dahiya</i>	249
9 Growth Factors and Oncogenes in Gastrointestinal Cancers <i>Eiichi Tahara</i>	279
10 Molecular Genetics of Retinoblastoma <i>Vivette D. Brown and Brenda L. Gallie</i>	311

Part III Diagnostic and Therapeutic Approaches	339
11 DNA in Neoplastic Disease Diagnosis <i>Mukesh Verma, Jacob Kagan, and Sudhir Srivastava</i>	341
12 Theoretical Foundations of Cancer Chemotherapy <i>Nicholas B. La Thangue</i>	369
13 Antitumor Steroids <i>Guy Leclercq</i>	389
14 Immunotoxins and Recombinant Immunotoxins in Cancer Therapy <i>Yoram Reiter and Avital Lev</i>	409
Index	443
