

Adding Excel to Your Analysis Arsenal

Excel Scientific and Engineering Cookbook™

O'REILLY®

David M. Bourg

Table of Contents

Preface	xi
1. Using Excel	1
1.1 Navigating the Interface	1
1.2 Entering Data	7
1.3 Setting Cell Data Types	9
1.4 Selecting More Than a Single Cell	13
1.5 Entering Formulas	14
1.6 Exploring the R1C1 Cell Reference Style	19
1.7 Referring to More Than a Single Cell	21
1.8 Understanding Operator Precedence	21
1.9 Using Exponents in Formulas	22
1.10 Exploring Functions	22
1.11 Formatting Your Spreadsheets	26
1.12 Defining Custom Format Styles	29
1.13 Leveraging Copy, Cut, Paste, and Paste Special	30
1.14 Using Cell Names (Like Programming Variables)	32
1.15 Validating Data	34
1.16 Taking Advantage of Macros	35
1.17 Adding Comments and Equation Notes	37
1.18 Getting Help	40
2. Getting Acquainted with Visual Basic for Applications	41
2.1 Navigating the VBA Editor	42
2.2 Writing Functions and Subroutines	45
2.3 Working with Data Types	49
2.4 Defining Variables	50

2.5	Defining Constants	52
2.6	Using Arrays	53
2.7	Commenting Code	54
2.8	Spanning Long Statements over Multiple Lines	55
2.9	Using Conditional Statements	55
2.10	Using Loops	56
2.11	Debugging VBA Code	59
2.12	Exploring VBA's Built-in Functions	62
2.13	Exploring Excel Objects	64
2.14	Creating Your Own Objects in VBA	69
2.15	VBA Help	72
3.	Collecting and Cleaning Up Data	73
3.1	Importing Data from Text Files	73
3.2	Importing Data from Delimited Text Files	78
3.3	Importing Data Using Drag-and-Drop	79
3.4	Importing Data from Access Databases	80
3.5	Importing Data from Web Pages	83
3.6	Parsing Data	84
3.7	Removing Weird Characters from Imported Text	86
3.8	Converting Units	87
3.9	Sorting Data	90
3.10	Filtering Data	93
3.11	Looking Up Values in Tables	97
3.12	Retrieving Data from XML Files	105
4.	Charting	108
4.1	Creating Simple Charts	108
4.2	Exploring Chart Styles	116
4.3	Formatting Charts	117
4.4	Customizing Chart Axes	118
4.5	Setting Log or Semilog Scales	121
4.6	Using Multiple Axes	123
4.7	Changing the Type of an Existing Chart	128
4.8	Combining Chart Types	130
4.9	Building 3D Surface Plots	131
4.10	Preparing Contour Plots	137
4.11	Annotating Charts	139
4.12	Saving Custom Chart Types	142

4.13 Copying Charts to Word	142
4.14 Displaying Error Bars	143
5. Statistical Analysis	145
5.1 Computing Summary Statistics	146
5.2 Plotting Frequency Distributions	150
5.3 Calculating Confidence Intervals	154
5.4 Correlating Data	155
5.5 Ranking and Percentiles	160
5.6 Performing Statistical Tests	162
5.7 Conducting ANOVA	166
5.8 Generating Random Numbers	168
5.9 Sampling Data	169
6. Time Series Analysis	172
6.1 Plotting Time Series Data	172
6.2 Adding Trendlines	173
6.3 Computing Moving Averages	175
6.4 Smoothing Data Using Weighted Averages	182
6.5 Centering Data	188
6.6 Detrending a Time Series	191
6.7 Estimating Seasonal Indices	195
6.8 Deseasonalization of a Time Series	199
6.9 Forecasting	201
6.10 Applying Discrete Fourier Transforms	204
7. Mathematical Functions	215
7.1 Using Summation Functions	215
7.2 Delving into Division	216
7.3 Mastering Multiplication	217
7.4 Exploring Exponential and Logarithmic Functions	219
7.5 Using Trigonometry Functions	221
7.6 Seeing Signs	222
7.7 Getting to the Root of Things	222
7.8 Rounding and Truncating Numbers	223
7.9 Converting Between Number Systems	224
7.10 Manipulating Matrices	225
7.11 Building Support for Vectors	227
7.12 Using Spreadsheet Functions in VBA Code	230
7.13 Dealing with Complex Numbers	230

8. Curve Fitting and Regression	233
8.1 Performing Linear Curve Fitting Using Excel Charts	233
8.2 Constructing Your Own Linear Fit Using Spreadsheet Functions	237
8.3 Using a Single Spreadsheet Function for Linear Curve Fitting	241
8.4 Performing Multiple Linear Regression	244
8.5 Generating Nonlinear Curve Fits Using Excel Charts	247
8.6 Fitting Nonlinear Curves Using Solver	249
8.7 Assessing Goodness of Fit	254
8.8 Computing Confidence Intervals	259
9. Solving Equations	263
9.1 Finding Roots Graphically	271
9.2 Solving Nonlinear Equations Iteratively	273
9.3 Automating Tedious Problems with VBA	277
9.4 Solving Linear Systems	284
9.5 Tackling Nonlinear Systems of Equations	289
9.6 Using Classical Methods for Solving Equations	291
10. Numerical Integration and Differentiation	296
10.1 Integrating a Definite Integral	297
10.2 Implementing the Trapezoidal Rule in VBA	301
10.3 Computing the Center of an Area Using Numerical Integration	304
10.4 Calculating the Second Moment of an Area	307
10.5 Dealing with Double Integrals	308
10.6 Numerical Differentiation	311
11. Solving Ordinary Differential Equations	318
11.1 Solving First-Order Initial Value Problems	318
11.2 Applying the Runge-Kutta Method to Second-Order Initial Value Problems	325
11.3 Tackling Coupled Equations	330
11.4 Shooting Boundary Value Problems	337
12. Solving Partial Differential Equations	342
12.1 Leveraging Excel to Directly Solve Finite Difference Equations	344
12.2 Recruiting Solver to Iteratively Solve Finite Difference Equations	346
12.3 Solving Initial Value Problems	351
12.4 Using Excel to Help Solve Problems Formulated Using the Finite Element Method	355

13. Performing Optimization Analyses in Excel	359
13.1 Using Excel for Traditional Linear Programming	359
13.2 Exploring Resource Allocation Optimization Problems	363
13.3 Getting More Realistic Results with Integer Constraints	368
13.4 Tackling Troublesome Problems	370
13.5 Optimizing Engineering Design Problems	376
13.6 Understanding Solver Reports	380
13.7 Programming a Genetic Algorithm for Optimization	385
14. Introduction to Financial Calculations	401
14.1 Computing Present Value	402
14.2 Calculating Future Value	402
14.3 Figuring Out Required Rate of Return	403
14.4 Doubling Your Money	404
14.5 Determining Monthly Payments	404
14.6 Considering Cash Flow Alternatives	405
14.7 Achieving a Certain Future Value	407
14.8 Assessing Net Present Worth	408
14.9 Estimating Rate of Return	410
14.10 Solving Inverse Problems	411
14.11 Figuring a Break-Even Point	412
Index	415
