contents

Preface

vii

The Tools of Multimedia

1

The Tools of Multimedia is a discussion of the equipment, hardware and software that is encountered in a typical work environment. A multimedia artist is destined to work with a variety of equipment and this chapter is a good introduction that discusses tips for choosing equipment as well as the relevant terminology for that equipment.

Planning Your Projects

42

Planning Your Projects is an introduction to brainstorming, storyboarding, comping, and using Creative Briefs and other tools that help a designer organize and create projects.

Introduction to Flash

66

Introduction to Flash is an overview of the basics of using Flash to create multimedia. Setting up, drawing, organizing and importing from other programs is discussed in this chapter.

Working with Photography

98

Working with Photography covers the tools and the techniques associated with taking great photographs. More than just talk about apertures and f-stops, the chapter discusses techniques such as bracketing, raw photography, lighting techniques, the rule of thirds, and other concepts that will help an artist take and recognize better photography.

The Power of Sound

146

The Power of Sound explores how the ear hears sound and compares it to how recording and playing devices record, store and play back sound. The book discusses the differences between analog versus digital, sound formats, compression and techniques for capturing audio.

Principles of Animation

172

Principles of Animation talks about the time tested principles which make animation great. Anticipation, follow-through, secondary motion, easing, squash and stretch can give inanimate objects life.

The Elements of Storytelling

208

The Elements of Storytelling examines the three act structure of most stories as well as background, character arcs and other techniques for telling great stories into your projects.

Making the Most of Video **234**

Making the Most of Video talks about ways of incorporating video into your projects by understanding shooting techniques like camera angles, shots, coverage, and point of view. The chapter also talks about compression algorithms as well as using Flash to deliver video content.

The Most Important Chapter **262**

The Most Important Chapter is a review of what was learned through the book and how to succeed in the industry.

Glossary **269**

Index **279**
