Gene Therapy in the Treatment of Cancer

Progress and Prospects

Edited by
Brian E. Huber & Ian Magrath

Contents

<i>Contributors</i>	<i>page</i>	ix
<i>Preface</i>		xi
1 Introduction: gene therapy approaches to cancer <i>Brian E. Huber</i>		1
2 Principles of transformation-directed cancer therapy <i>Ian Magrath and Kishor Bhatia</i>		9
3 Vectors for cancer gene therapy <i>Prem Seth</i>		41
4 Genetically engineering drug sensitivity and drug resistance for the treatment of cancer <i>Brian E. Huber</i>		78
5 Oncogene inactivation and replacement strategies for cancer <i>Jack A. Roth</i>		97
6 Genetically modified tumor cells as tumor vaccines <i>John C. Krauss, Suyu Shu and Alfred E. Chang</i>		108
7 Genetically modified lymphocytes and hematopoietic stem cells as therapeutic vehicles <i>Patrick J. Geraghty and James J. Mulé</i>		137
8 Pharmacologic effects of oligonucleotides and some clinical applications <i>Leonard M. Neckers and Kanak Iyer</i>		149
9 Current status of gene marking and gene therapy in oncology clinical trials <i>Cynthia A. Richards</i>		166
10 Safety testing for gene therapy products <i>J. Patrick Condreay</i>		200
<i>Index</i>		209
