Chapter 1. Sample preparation and subcellular fractionation approaches: purification of membranes and their microdomains for mass spectrometry analysis
Yan Li, Phil Oh, and Jan E. Schnitzer
1. Introduction 1
2. Methods and approaches 2
   2.1 Isolation of plasma membrane and its microdomains 2
   2.2 Principles of the technology 3
   2.3 Methodology 3
3. Troubleshooting 13
4. Identification of proteins from purified membranes by liquid chromatography tandem MS 14
   4.1 Mapping of the proteome of the rat lung microvascular endothelial cell surface by multi-dimensional protein identification technology 14
   4.2 Target proteins identified by two-dimensional gel electrophoresis combined with LC-MS/MS 14
5. References 15

Chapter 2. An isotope-coding strategy for quantitative proteomics
Xian Chen
1. Introduction 17
2. Methods and approaches 18
   2.1 Amino acid-coded mass tagging 18
   2.2 High-throughput MS for AACT-based quantitative proteomic analysis 23

2.3 AACT/epitope dual-tagging strategy for pathway scale profiling of protein–protein interactions regulating gene expression 27
2.4 Mapping 'real-time' phosphorylation sites of signal proteins involved in signal transduction 29
3. Conclusions 30
4. Troubleshooting 30
5. References 31

Chapter 3. Gel-based approaches
Stuart J. Cordwell, Ben Crossett, and Melanie Y. White
1. Introduction 33
2. Methods and approaches 34
2.1 Sample preparation 34
2.2 Protein pre-fractionation 36
2.3 Isoelectric focusing 41
2.4 Difference in-gel electrophoresis 42
2.5 Reduction, alkylation, and detergent exchange (equilibration) 45
2.6 SDS-PAGE 46
2.7 Staining 2DE gels 47
3. Troubleshooting 53
3.1 Interfering molecules during IEF 53
3.2 'Difficult' proteins in 2DE 54
3.3 Alternatives to 2DE gel-based approaches 56
4. Conclusions 56
5. References 57

Chapter 4. Peptide sorting by reverse-phase diagonal chromatography
Kris Gevaert and Joël Vandekerckhove
1. Introduction 61
2. Methods and approaches 62
2.1 Principles of combined fractional diagonal chromatography 62
2.2 General applications of COFRADIC for gel-free proteomics 65
2.3 Methodology 66
3. Troubleshooting 79
4. References 81

Chapter 5. Mass spectrometry strategies for protein identification
David R. Goodlett and Garry L. Corthals
1. Introduction 83
2. Sample preparation 85
2.1 Digestion 85
2.2 Sample clean-up prior to LC-MS 87
3. MS analysis 89

3.1 Microcapillary LC-MS/MS 89
3.2 Data-dependent MS/MS allowing automated ion selection 90
3.3 Iterative gas-phase fractionation increasing proteome coverage 93
4. Database searching 94
4.1 Matching peptide fragmentation patterns to amino acid sequence 95
5. Concluding remarks 97
6. References 98

Chapter 6. Desorption electrospray ionization: proteomics studies by a method that bridges ESI and MALDI
Zoltán Takáts, Justin M. Wiseman, Demian R. Ifa, and R. Graham Cooks
1. Introduction 99
1.1 DESI instrumentation 100
1.2 Ion formation 102
2. Methods and approaches 104
2.1 Analysis of intact proteins 105
2.2 Analysis of tryptic digests 106
2.3 Coupling DESI with separation methods 110
2.4 Reactive DESI 112
2.5 *In situ* proteomics 113
3. Troubleshooting 116
4. References 117

Chapter 7. Analysis of cellular protein complexes by affinity purification and mass spectrometry
Tilmann Bürckstümmer and Keiryn L. Bennett
1. Introduction 119
2. Methods and approaches 120
2.1 TAP compared with other experimental approaches 120
2.2 Methodology 121
3. Troubleshooting 132
4. References 133

Chapter 8. Clinical proteomic profiling and disease signatures
Rosamonde E. Banks, David A. Cairns, David N. Perkins, and Jennifer H. Barrett
1. Introduction 135
2. Methods and approaches 137
2.1 Principles of MALDI and SELDI 138
2.2 Choice of sample type 139
2.3 Study design, pre-analytical and analytical issues 140
2.4 Data processing 141

2.5 Data analysis 142
2.6 Validation and translation 143
2.7 Methodology 144
3. Troubleshooting 157
4. References 157

Chapter 9. Characterization of post-translational modifications: undertaking the phosphoproteome
W. Andy Tao, Bernd Bodenmiller, and Ruedi Aebersold
1. Introduction 161
2. Methods and approaches 163
2.1 Enrichment of phosphoproteins 163
2.2 Enrichment of phosphopeptides 165
2.3 MS data acquisition, phosphopeptide identification, and determination of sites of phosphorylation 173
2.4 Quantitative phosphoproteomics 176
3. Troubleshooting 178
4. References 179

Chapter 10. Protein microarray technologies
Chien-Sheng Chen, Sheng-Ce Tao, and Heng Zhu
1. Introduction 183
2. Protein microarray fabrication 184
2.1 Surface materials 184
2.2 Protein printing 185
2.3 Assay platforms 186
2.4 Detection methods 187
3. Analytical protein microarrays 190
4. Functional protein microarrays 191
4.1 Expression-ready open reading frame collections and high-throughput production of proteins 192
4.2 Protein–protein and protein–lipid interactions 194
4.3 Protein–DNA interactions 195
4.4 Protein–drug interactions 195
4.5 Protein–peptide interactions 196
4.6 Protein–cell interactions 196
4.7 Identification of kinase substrates on protein chips 198
4.8 Protein glycosylation analysis 198
4.9 Profiling immune responses 198
5. Development of new protein microarray technologies 199
5.1 Reverse-phase protein microarrays 199
5.2 Making protein microarrays without large-scale cloning and expressions 200
6. Outlook 202
7. References 202

Chapter 11. Intelligent mining of complex data: challenging the proteomic bottleneck.
Dan Bach Kristensen and Alexandre Podtelejnikov
1. Introduction 207
2. Methods and approaches 209
   2.1 Instrumentation 210
   2.2 Database selection 212
   2.3 Selection of a search engine 213
   2.4 Data mining in shotgun proteomics 215
3. EPICENTER 216
   3.1 Data organization and import 216
   3.2 Automatic and manual peptide validation 218
   3.3 Data mining – exploring datasets 220
   3.4 Data mining – comparing datasets 222
   3.5 Additional EPICENTER features 223
   3.6 Conclusions 224
4. References 224

Chapter 12. Bioinformatic approaches in proteomics
Sandra Orchard and Henning Hermjakob
1. Introduction 227
2. Methods and approaches 228
   2.1 *In silico* characterization of proteins 228
   2.2 Data standardization 230
   2.3 Methodology 232
3. Troubleshooting 242
4. References 243
