

RANDOM VIBRATIONS

Analysis of Structural and Mechanical Systems

LOREN D. LUTES • SHAHRAM SARKANI

Contents

Preface

xi

Chapter 1 Introduction

1.1 Why Study Random Vibration?	1
1.2 Probabilistic Modeling and Terminology	3
1.3 Approach to the study of Failure Probability	7
Exercises	8

Chapter 2 Fundamentals of Probability and Random Variables

2.1 Use of Probability and Random Variable Theory	11
2.2 Fundamental Concepts of Probability Theory	12
2.3 Random Variables and Probability Distributions	15
2.4 Probability Density Functions	20
2.5 Joint and Marginal Distributions	26
2.6 Distribution of a Function of a Random Variable	35
2.7 Conditional Probability Distributions	38
2.8 Independence of Random Variables	48
Exercises	53

Chapter 3 Expected Values of Random Variables

3.1 Concept of Expected Values	59
3.2 Definition of Expected Values	59
3.3 Moments of Random Variables	64
3.4 Conditional Expectation	78
3.5 Generalized Conditional Expectation	81
3.6 Characteristic Function of a Random Variable	84
3.7 Power Series for Characteristic Function	90
3.8 Importance of Moment Analysis	95
Exercises	95

Chapter 4 Analysis of Stochastic Processes

4.1 Concept of a Stochastic Process	103
4.2 Probability Distribution.....	105
4.3 Moment and Covariance Functions	107
4.4 Stationarity of Stochastic Processes	114
4.5 Properties of Autocorrelation and Autocovariance.....	120
4.6 Limits of Stochastic Processes.....	127
4.7 Ergodicity of a Stochastic Process.....	132
4.8 Stochastic Derivative	138
4.9 Stochastic Integral	148
4.10 Gaussian Stochastic Processes.....	154
Exercises	158

Chapter 5 Time Domain Linear Vibration Analysis

5.1 Deterministic Dynamics.....	167
5.2 Evaluation of Impulse Response Functions	170
5.3 Stochastic Dynamics	177
5.4 Response to Stationary Excitation	181
5.5 Delta-Related Excitations.....	186
5.6 Response of Linear Single-Degree-of-Freedom Oscillator	193
5.7 Stationary SDF Response to Delta-Related Excitation	205
5.8 Nearly Delta-Related Processes	210
5.9 Response to Gaussian Excitation.....	211
Exercises	212

Chapter 6 Frequency Domain Analysis

6.1 Frequency Content of a Stochastic Process.....	219
6.2 Spectral Density Functions for Stationary Processes.....	221
6.3 Properties of Spectral Density Functions	226
6.4 Narrowband Processes	228
6.5 Broadband Processes and White Noise	232
6.6 Linear Dynamics and Harmonic Transfer Functions	234
6.7 Evolutionary Spectral Density	241
6.8 Response of Linear SDF Oscillator	245
6.9 Calculating Autospectral Density from a Sample Time History	251
6.10 Higher-Order Spectral Density Functions	254
Exercises	257

Chapter 7 Frequency, Bandwidth, and Amplitude

7.1 General Concepts	261
7.2 Characteristic Frequency and Bandwidth from Rate of Occurrence	261
7.3 Frequency Domain Analysis	272
7.4 Amplitude and Phase of a Stationary Stochastic Process	282
7.5 Amplitude of a Modulated Stochastic Process	298
Exercises	301

Chapter 8 Matrix Analysis of Linear Systems

8.1 Generalization of Scalar Formulation	307
8.2 Multi-Degree of Freedom Systems	311
8.3 Uncoupled Modes of MDF Systems	313
8.4 Time Domain Stochastic Analysis of Uncoupled MDF Systems	319
8.5 Frequency Domain Analysis of MDF Systems	328
8.6 State Space Formulation of Equations of Motion	334
Exercises	345

Chapter 9 Direct Stochastic Analysis of Linear Systems

9.1 Basic Concept	351
9.2 Derivation of State-Space Moment and Cumulant Equations	354
9.3 Equations for First and Second Moments and Covariance	356
9.4 Simplifications for Delta-Correlated Excitation	361
9.5 Solution of the State-Space Equations	365
9.6 Energy Balance and Covariance	375
9.7 Higher Moments and Cumulants Using Kronecker Notation	381
9.8 State-Space Equations for Stationary Autocovariance	391
9.9 Fokker-Planck Equation	395
Exercises	411

Chapter 10 Introduction to Nonlinear Stochastic Vibration

10.1 Approaches to the Problem	415
10.2 Fokker-Planck Equation for Nonlinear System	418
10.3 Statistical Linearization	431
10.4 Linearization of Dynamics Problems	434
10.5 Linearization of Hysteretic Systems	447
10.6 State-Space Moment and Cumulant Equations	465
Exercises	480

Chapter 11 Failure Analysis

11.1 Modes of Failure	487
11.2 Probability Distribution of Peaks.....	488
11.3 Extreme Value Distribution and Poisson Approximation	495
11.4 Improved Estimates of the Extreme Value Distribution.....	504
11.5 Inclusion-Exclusion Series for Extreme Value Distribution	514
11.6 Extreme Value of Gaussian Response of SDF Oscillator.....	516
11.7 Accumulated Damage	520
11.8 Stochastic Analysis of Fatigue.....	523
11.9 Rayleigh Fatigue Approximation	529
11.10 Other Spectral Fatigue Methods for Gaussian Stress.....	533
11.11 Non-Gaussian Fatigue Effects	543
Exercises	550

Chapter 12 Effect of Parameter Uncertainty

12.1 Basic Concept.....	557
12.2 Modeling Parameter Uncertainty.....	561
12.3 Direct Perturbation Method	562
12.4 Logarithmic Perturbation Method	566
12.5 Stationary Response Variance for Delta-Correlated Excitation	569
12.6 Nonstationary Response Variance for Delta-Correlated Excitation.....	578
12.7 Stationary Response Variance for General Stochastic Excitation.....	582
12.8 First-Passage Failure Probability	590
12.9 Fatigue Life	596
12.10 Multi-Degree-of-Freedom Systems.....	601
Exercises	606

Appendix A Dirac Delta Function	613
--	------------

Appendix B Fourier Analysis.....	617
---	------------

References	623
