

FUNDAMENTAL FOOD MICROBIOLOGY

FOURTH EDITION

BIBEK RAY & ARUN BHUNIA

CRC Press
Taylor & Francis Group

Contents

Preface to the Fourth Edition	xxxiii
Preface to the Third Edition.....	xxxv
Preface to the Second Edition.....	xxxvii
Preface to the First Edition.....	xxxix
Authors	xli
 Part I Introduction to Microbes in Foods	 1
Chapter 1	
History and Development of Food Microbiology.....	3
Introduction	3
Discovery of Microorganisms	3
Where Are They Coming From?.....	3
What Are Their Functions?	4
Development of Early Food Microbiology (Before A.D. 1900)	4
Food Microbiology: Current Status.....	6
Food Fermentation/Probiotics	6
Food Spoilage	7
Foodborne Diseases	7
Miscellaneous	7
Food Microbiology and Food Microbiologists.....	7
Conclusion	8
References	8
Questions	9
 Chapter 2	
Characteristics of Predominant Microorganisms in Food	11
Introduction	11
Classification of Microorganisms.....	11
Nomenclature	12
Morphology and Structure of Microorganisms in Foods	13
Yeasts and Molds	13
Bacterial Cells	15
Viruses	15
Important Microorganisms in Food.....	16
Important Mold Genera	16
Important Yeast Genera	17
Foodborne Protozoan Parasites	18

Important Viruses	18
Important Bacterial Genera	18
Gram-Negative Aerobes	20
Gram-Negative Facultative Anaerobes	21
Rickettsias	22
Gram-Positive Cocci	22
Gram-Positive, Endospore-Forming Rods	23
Gram-Negative, Endospore-Forming Rods	23
Gram-Positive, Nonsporulating Regular Rods	23
Gram-Positive, Nonsporeforming Irregular Rods	24
Some New Genera	24
Important Bacterial Groups in Foods	24
Lactic Acid Bacteria	25
Acetic Acid Bacteria	25
Propionic Acid Bacteria	25
Butyric Acid Bacteria	25
Proteolytic Bacteria	25
Lipolytic Bacteria	25
Saccharolytic Bacteria	25
Thermophilic Bacteria	25
Psychrotrophic Bacteria	25
Thermotolerant Bacteria	26
Halotolerant Bacteria	26
Aciduric Bacteria	26
Osmophilic Bacteria	26
Gas-Producing Bacteria	26
Slime Producers	26
Spore Formers	26
Aerobes	26
Anaerobes	26
Facultative Anaerobes	27
Coliforms	27
Fecal Coliforms	27
Enteric Pathogens	27
Conclusion	27
References	27
Questions	28
 Chapter 3	
Sources of Microorganisms in Foods	29
Introduction	29
Predominant Microorganisms in Different Sources	30
Plants (Fruits and Vegetables)	30
Animals, Birds, Fish, and Shellfish	30
Air	31
Soil	31
Sewage	31
Water	32
Humans	32
Food Ingredients	32
Equipment	32

Miscellaneous	33
Conclusion	33
References	33
Questions	33

Chapter 4

Normal Microbiological Quality of Foods and Its Significance	35
Introduction	35
Raw and Ready-to-Eat Meat Products	35
Raw and Pasteurized Milk	36
Shell Egg and Liquid Egg	37
Fish and Shellfish	37
Vegetables, Fruits, and Nuts	38
Cereal, Starches, and Gums	39
Canned Foods	39
Sugars and Confectioneries	39
Soft Drinks, Fruit and Vegetable Drinks, Juices, and Bottled Water	40
Mayonnaise and Salad Dressings	40
Spices and Condiments	40
Conclusion	41
References	41
Questions	41

Part II Microbial Growth Response in the Food Environment..... 43

Chapter 5

Microbial Growth Characteristics	45
Introduction	45
Microbial Reproduction or Growth	45
Binary Fission	45
Generation Time (or Doubling Time)	46
Specific Growth Rate	47
Optimum Growth	47
Growth Curve	48
Nature of Microbial Growth in Food	49
Mixed Population	49
Sequence of Growth	49
Growth in Succession or Diauxic Growth	49
Symbiotic Growth	50
Synergistic Growth	50
Antagonistic Growth	50
Conclusion	50
References	51
Questions	51

Chapter 6

Factors Influencing Microbial Growth in Food	53
Introduction	53
Intrinsic Factors or Food Environment	53
Nutrients and Growth	53
Carbohydrates in Foods	54

Proteins in Foods	54
Lipids in Foods	55
Minerals and Vitamins in Foods	55
Growth Factors and Inhibitors in Food	56
Water Activity and Growth	56
Principle	56
A_w of Food.....	56
A_w and Microbial Growth.....	56
pH and Growth	57
Principle	57
pH of Food.....	58
pH and Microbial Growth.....	58
Redox Potential, Oxygen, and Growth.....	58
Principle	58
Redox Potential in Food	59
Redox Potential and Microbial Growth	59
Extrinsic Factors.....	60
Temperature and Growth	60
Principle	60
Food and Temperature	60
Microbial Growth and Viability	60
Conclusion	61
References	61
Questions	61

Chapter 7

Microbial Metabolism of Food Components.....	63
Introduction	63
Respiration and Fermentation During Growth	63
Metabolism of Food Carbohydrates	64
Degradation of Polysaccharides	65
Degradation of Disaccharides	65
Degradation of Monosaccharides	65
Fermentation	65
EMP Pathway.....	65
HMP Pathway	66
ED Pathway	66
Pentose Phosphoketolase Pathway	66
Hexose Phosphoketolase Pathway.....	67
Some Specific Pathways	67
Anaerobic Respiration	67
Aerobic Respiration	68
Synthesis of Polymers	68
Metabolism of Food Proteins	68
Aerobic Respiration (Decay)	69
Fermentation (Putrefaction)	69
Metabolism of Food Lipids	69
Conclusion	70
References	70
Questions	70

Chapter 8	
Microbial Sporulation and Germination	73
Introduction	73
Mold Spores	73
Yeast Spores	73
Bacterial Spores	73
Sporulation	75
Dormancy	76
Activation	76
Germination	76
Outgrowth	77
Importance of Spores in Food	77
Conclusion	78
References	79
Questions	79
 Part III Beneficial Uses of Microorganisms in Food	 81
Chapter 9	
Microbial Stress Response in the Food Environment	83
Introduction	83
Stress Adaptation	84
Definition and Observations	84
Mechanisms of Stress Adaptation	84
Importance of Stress-Adapted Microorganisms in Food	85
Pathogens and Spoilage Bacteria Surviving in Low-pH Foods	85
Stress-Adapted Pathogens Surviving Stomach pH	86
Enhancing Viability of Starter Cultures and Probiotic Bacteria	86
Sublethal Stress and Injury	86
Definition and Observations	86
Manifestation of Bacterial Sublethal Injury	88
Sites and Nature of Injury	89
Repair of Reversible Injury	89
Injury in Yeasts and Molds	91
Importance of Sublethally Injured Microorganisms in Food	91
Detection of Undesirable Microorganisms	91
Enhancing Shelf Life of Foods	91
Enhancing Viability of Starter Cultures	91
Viable-but-Nonculturable	92
Definition and Terminologies	92
Proponent Views	92
Opponent Views	93
Current Views	94
Importance of VBNC Microorganisms in Food	94
Conclusion	94
References	95
Questions	96
 Chapter 10	
Microorganisms Used in Food Fermentation	99
Introduction	99

Microbiology of Fermented Foods	99
Lactic Starter Cultures	100
<i>Lactococcus</i>	100
<i>Streptococcus</i>	100
<i>Leuconostoc</i>	101
<i>Pediococcus</i>	102
<i>Lactobacillus</i>	102
<i>Oenococcus</i>	103
Other Starter Cultures	104
<i>Bifidobacterium</i>	104
<i>Propionibacterium</i>	104
<i>Brevibacterium</i>	104
<i>Acetobacter</i>	104
Yeasts and Molds	105
Yeasts	105
Molds	105
Conclusion	106
References	106
Questions	106
Chapter 11	
Biochemistry of Some Beneficial Traits	107
Introduction	107
Mechanisms of Transport of Nutrients	107
Transport and Metabolism of Carbohydrates	108
PEP-PTS System for Lactose Transport in <i>Lactococcus lactis</i>	108
Permease System for Lactose in <i>Lactobacillus acidophilus</i>	109
Carbohydrates Available Inside the Cells for Metabolism	109
Homolactic Fermentation of Carbohydrates	109
Heterolactic Fermentation of Carbohydrates	111
Metabolism of Pentoses	112
Hexose Fermentation by <i>Bifidobacterium</i>	112
Diacetyl Production from Citrate	113
Propionic Acid Production by <i>Propionibacterium</i>	113
Transport and Metabolism of Proteinaceous Compounds and Amino Acids	113
Transport and Metabolism of Lipid Compounds	114
Conclusion	114
References	114
Questions	115
Chapter 12	
Genetics of Some Beneficial Traits	117
Introduction	117
Plasmids and Plasmid-Linked Traits in Starter-Culture Bacteria	117
Important Characteristics of Bacterial Plasmids	118
Some Characteristics of Small (ca. 10 kb) and Large (over 10 to ca. 150 kb) Plasmids	118
Presence of Plasmids in Some Starter-Culture Bacteria	118
Phenotype Assignment to a Plasmid	119
Plasmid-Linked Traits in Starter-Culture Bacteria	119
Cryptic Plasmids	120
Plasmid Replication	121
Plasmid Mapping and Sequencing	121

Gene Transfer Methods in Starter-Culture Bacteria	121
Transduction	122
Conjugation	122
Transformation	123
Protoplast Fusion	123
Electrotransformation	123
Conjugative Transposons	123
Gene Cloning	124
Cloning Vectors	124
Metabolic Engineering	125
Mixed Acid Fermentation by <i>Lactococcus lactis</i>	126
L(+)-Lactic Acid Production	126
Diacetyl Production by <i>Lactococcus lactis</i>	126
Alanine Production from Carbohydrates	126
Production of Mannitol and Other Polyols	126
Production of Folic Acid and Riboflavin	127
Enhancing Proteolysis by Cell Lysis	127
Protein Targeting	127
Expression of Interleukin	127
Drug-Delivery System	128
Production of Pediocin in Heterologous Hosts	128
Protein Engineering	128
Production of Hybrid Prepediocin	128
Amino Acid Variants of Pediocin	129
Genome Mapping and Sequencing	129
Lactic Acid Bacteria	129
Bacteriophages	131
The <i>Lac</i> and <i>Las</i> Genes	131
Conclusion	132
References	132
Questions	133
Chapter 13	
Starter Cultures and Bacteriophages	135
Introduction	135
History	135
Concentrated Cultures	136
Starter-Culture Problems	137
Strain Antagonism	137
Loss of a Desired Trait	138
Cell Death and Injury	138
Inhibitors in Raw Materials	138
Bacteriophages of Lactic Acid Bacteria	138
Morphology and Characteristics	138
Life Cycle	139
Host Specificity	140
Control Methods	140
Yeast and Mold Cultures	140
Conclusion	140
References	141
Questions	141

Chapter 14	
Microbiology of Fermented Food Production	143
<i>Introduction</i>	143
General Method of Production	143
Raw (or Starting) Materials	144
Microorganisms Used	144
Fermentation Process	144
Natural Fermentation	144
Back Slopping	144
Controlled Fermentation	145
Fermented Dairy Products	145
Milk Composition and Quality	145
Fermented Milk Products	146
Microbiology of Cultured Buttermilk Fermentation	146
Product Characteristics	146
Processing	147
Starter (Controlled Fermentation)	147
Growth	147
Biochemistry	147
Genetics	147
Microbial Problems	148
Microbiology of Yogurt Fermentation	148
Characteristics	148
Processing	148
Starters (Controlled Fermentation)	148
Growth	149
Biochemistry	149
Genetics	150
Microbial Problems	151
Cheeses	151
Unripened Cheese	151
Ripened Cheese	151
Microbiology of Cottage Cheese	152
Characteristics	152
Processing (from Skim Milk)	152
Starters (Controlled Fermentation)	152
Growth, Biochemistry, and Genetics	152
Microbial Problems	152
Microbiology of Cheddar Cheese	153
Characteristics	153
Processing	153
Starters (Controlled Fermentation)	153
Growth	153
Biochemistry	153
Genetics	154
Microbial Problems	154
Microbiology of Swiss Cheese	154
Characteristics	154
Processing	154
Starters (Controlled Fermentation)	155
Growth	155

Biochemistry	155
Genetics	155
Microbial Problems	155
Microbiology of Blue Cheese	155
Characteristics	155
Processing	156
Starters and Growth (Controlled Fermentation)	156
Biochemistry, Genetics, and Problems	156
Accelerated Cheese Ripening	156
Curing at High Temperature	156
Addition of Enzymes	156
Slurry Method	157
Novel Methods	157
Fermented Meat Products	157
Types	157
Microbiology of Semidry Sausages	157
Characteristics	157
Processing	157
Starters (Controlled or Natural Fermentation)	158
Growth	158
Biochemistry	158
Genetics	158
Microbial Problems	159
Fermented Vegetable Products	159
Microbiology of Sauerkraut	159
Characteristics	159
Processing	159
Starters (Natural) and Growth	159
Biochemistry	160
Genetics	160
Microbial Problems	160
Conclusion	160
References	160
Questions	161

Chapter 15

Intestinal Beneficial Bacteria	163
Introduction	163
Microbiology of the Human GI Tract	163
Important Characteristics of Beneficial Bacteria	164
Beneficial Effects of Probiotics	165
Lactose Hydrolysis	165
Reducing Serum Cholesterol Level	166
Reducing Colon Cancer	166
Reducing Intestinal Disorders	166
Modulating Immune Response	167
Reducing Allergic Diseases	167
Probiotics as Vaccine Carriers for Infectious Agent	167
Miscellaneous Benefits	168
Some Aspects to Consider	168
Strain Variation	168

Sensitivity to Stomach Acids	169
Viability and Injury of Cells	169
Dose Level and Duration	169
Induced Lactase Trait	169
Antibacterial Substances	169
True Species and Strains	170
Expertise in Research Areas	170
Current Developments	170
Standard of Identity	170
Scientific Status Summary	170
Pathogenic Nature.....	171
Probiotics, Prebiotics, and Synbiotics	171
Probiotics	171
Prebiotics	172
Synbiotics.....	172
Biogenics	172
Genome Sequence of Probiotic Bacteria.....	173
Conclusion	173
References	173
Questions	174

Chapter 16

<i>Food Biopreservatives of Microbial Origin</i>	175
Introduction	175
Viable Cells of Lactic Acid Bacteria as Preservatives	175
Organic Acids, Diacetyl, Hydrogen Peroxide, and Reuterine as Food Preservatives	176
Organic Acids	176
Diacetyl.....	177
Hydrogen Peroxide.....	177
Reuterine	177
Bacteriocins of Lactic Acid Bacteria as Food Preservatives	178
Bacteriocin-Producing Strains	178
Characteristics of Bacteriocins	179
Genetics and Gene Organization	182
Mode of Action.....	183
Production and Purification.....	184
Applications	184
Yeast Metabolites as Preservatives	185
Conclusion	185
References	186
Questions	186

Chapter 17

<i>Food Ingredients and Enzymes of Microbial Origin</i>	189
Introduction	189
Microbial Proteins and Food Additives	189
Single-Cell Proteins (SCPs)	189
Amino Acids.....	190
Nutraceuticals and Vitamins	190
Flavor Compounds and Flavor Enhancers	190

Colors	191
Exopolysaccharides (EPS)	191
Organic Acids	191
Preservatives	192
Microbial Enzymes in Food Processing	192
Enzymes Used	193
α -Amylase, Glucoamylase, and Glucose Isomerase	193
Catalase	193
Cellulase, Hemicellulase, and Pectinase	193
Invertase	193
Lactase	193
Lipases	193
Proteases	193
Enzyme Production by Recombinant DNA Technology	193
Immobilized Enzymes	194
Adsorption on a Solid Support	194
Covalent Bonding	194
Entrapping	194
Crosslinking	195
Thermostable Enzymes	195
Enzymes in Food Waste Treatment	196
Conclusion	196
References	196
Questions	197

Part IV Microbial Food Spoilage 199

Chapter 18

Important Factors in Microbial Food Spoilage	201
Introduction	201
Sequence of Events	201
Significance of Microorganisms	201
Microbial Types	201
Microbial Numbers	202
Predominant Microorganisms	203
Some Important Food Spoilage Bacteria	203
Psychrotrophic Bacteria	203
Some Important Psychrotrophic Aerobic Spoilage Bacteria	204
Some Important Psychrotrophic Facultative Anaerobic Spoilage Bacteria	204
Some Important Thermotrophic Psychrotrophs	204
Thermophilic Bacteria	204
Aciduric Bacteria	204
Significance of Foods	205
Food Types	205
Food Nutrients	205
Utilization of Food Nutrients	206
Microbial Growth in Succession	207
Conclusion	207
References	207
Questions	208

Chapter 19

Spoilage of Specific Food Groups	209
Introduction	209
Fresh and Ready-to-Eat Meat Products	209
Raw Meat	209
Ready-to-Eat Meat Products	210
Eggs and Egg Products	212
Shell Eggs	212
Egg Products	212
Fish, Crustaceans, and Mollusks	212
Fish	212
Crustaceans	213
Mollusks	213
Milk and Milk Products	214
Raw Milk	214
Pasteurized Milk	214
Concentrated Liquid Products	215
Butter	215
Vegetables and Fruits	215
Vegetables	215
Fruits	216
Soft Drinks, Fruit Juices and Preserves, and Vegetable Juices	216
Cereals and Their Products	217
Grains and Seeds	217
Refrigerated Dough	217
Breads	217
Pastas	217
Pastries	218
Liquid Sweeteners and Confectioneries	218
Mayonnaise, Salad Dressings, and Condiments	218
Fermented Foods	218
Fermented Meat Products	219
Fermented Dairy Products	219
Fermented Vegetable and Fruit Products	220
Fermented Beverages	220
Canned Foods	220
Thermophilic Sporeformers	221
Flat Sour Spoilage	221
Thermophilic Anaerobe (TA) Spoilage	221
Sulfide Stinker Spoilage	221
Spoilage Due to Insufficient Heating	221
Spoilage Due to Container Leakage	222
Conclusion	222
References	222
Questions	222

Chapter 20

New Food Spoilage Bacteria in Refrigerated Foods	225
Microorganisms that Grow in Refrigerated Foods (Psychrotrophs)	225
Popularity of Refrigerated Foods	226

Microbiological Problems.....	226
Incidence of Spoilage of Vacuum-Packaged Refrigerated Food	228
Spoilage of Unprocessed (Fresh) Beef by <i>Clostridium</i> Species	228
Spoilage of Roasted Beef by <i>Clostridium</i> Species	229
Spoilage of Pork Chops by <i>Clostridium algidicarnis</i>	230
Spoilage of Tofu by <i>Clostridium</i> Species	230
Spoilage of Unripened Soft Cheese by <i>Leuconostoc</i> Species	230
Spoilage of Low-Heat-Processed Meat Products by <i>Leuconostoc</i> Species	230
Ammonia Odor in Turkey Roll	231
Yellow Discoloration of Luncheon Meat	231
Gray Discoloration of Turkey Luncheon Meat	231
Pink Discoloration of Sliced, Chopped, and Formed Roast Beef	231
Gas Distension and Pink Discoloration of Sliced Turkey Rolls	232
Gas Distension (Blowing) of Ground Beef Chubs	233
Egg Odor in Refrigerated Fresh Chicken Meat Products	233
Off-Odor in Frozen Chicken Meat Product	234
Gas and Slime Development in Vacuum-Packaged Smoked Salmon Products	234
Conclusion	235
References	236
Questions	236

Chapter 21

Food Spoilage by Microbial Enzymes	239
Introduction	239
Characteristics of Heat-Stable Enzymes of Psychrotrophic Bacteria	240
Spoilage of Foods with Heat-Stable Microbial Enzymes.....	241
Pasteurized Milk	241
Ultrahigh Temperature (UHT)-Treated Milk Products	241
Cheeses	242
Cultured Dairy Products	242
Cream and Butter	242
Milk Powder	242
Spoilage of Foods by Microbial Enzymes at Low Temperature	242
Conclusion	243
References	243
Questions	244

Chapter 22

Indicators of Microbial Food Spoilage	245
Introduction	245
Microbiological Criteria.....	246
Enumeration of Colony-Forming Units (CFUs)	246
Phase-Contrast Microscopy	247
Chemical Criteria.....	247
Assay of Heat-Stable Enzymes	248
Heat-Stable Proteinases in Milk	248
Heat-Stable Lipases in Milk	248
Conclusion	249
References	249
Questions	249

Part V Microbial Foodborne Diseases	251
Chapter 23	
Important Facts in Foodborne Diseases	253
Introduction	253
Human Gastrointestinal Disorder	253
Epidemiological Aspects	254
Investigation of a Foodborne Disease	254
Foodborne Disease Outbreak	254
Incidence of Foodborne Disease Outbreak	254
Cost of Foodborne Diseases	254
Predominant Etiological Agents	255
Types of Microbial Foodborne Diseases	255
Intoxication	256
Infection	256
Toxicoinfection	256
Predominant Bacterial and Viral Pathogens Associated with Foodborne Diseases	256
Predominant Food Types Associated with Foodborne Diseases of Bacterial and Viral Origin	258
Predominant Places of Food Consumption Associated with Confirmed Foodborne Disease Outbreaks of Bacterial and Viral Origin	259
Predominant Contributing Factors Associated with Confirmed Foodborne Disease Outbreaks from Pathogenic Bacteria and Viruses	260
Influence of Month (of the Year) to Number of Foodborne Disease Outbreaks Caused by Pathogenic Bacteria and Viruses	260
Influence of Location on Foodborne Diseases of Pathogenic Bacterial and Viral Origin	261
Human Factors in Foodborne Disease Symptoms	261
Acceptance Quality of Food Due to Growth of Pathogens	262
Sequence of Events in a Foodborne Disease	262
Current Trends	262
Foodborne Disease Outbreaks During 1988 to 1992	263
FoodNet	263
Estimated Foodborne Illnesses	265
Conclusion	266
References	267
Questions	267
Chapter 24	
Foodborne Intoxications	269
Introduction	269
Staphylococcal Intoxication	269
Importance	269
Characteristics of <i>Staphylococcus aureus</i>	269
Organisms	269
Growth	270
Habitat	270
Toxins and Toxin Production	270
Disease and Symptoms	271
Food Association	271
Prevention (Reduction) of the Disease	272
Identification Methods	273
Analysis of an Outbreak	273

Botulism	274
Importance.....	274
Characteristics	274
Organisms	274
Growth	274
Habitat	274
Toxins and Toxin Production	275
Disease and Symptoms	275
Foodborne Botulism.....	276
Infant Botulism	276
Hidden Botulism	276
Wound Botulism.....	276
Inadvertent Botulism	276
Food Association	276
Prevention of Botulism	277
Identification Methods	278
Analysis of a Foodborne Botulism Case	278
Mycotoxigenesis	278
Importance.....	278
Characteristics	278
Organisms	278
Growth	279
Habitat	279
Toxins and Toxin Production	279
Food Association	280
Prevention of Mycotoxigenesis	280
Detection Methods	281
Conclusion	281
References	281
Questions	282
Chapter 25	
Foodborne Infections.....	283
Introduction	283
Salmonellosis by <i>Salmonella enterica</i>	283
Importance.....	283
Current Nomenclature System	284
Predominant Serotypes in Salmonellosis.....	284
Characteristics	285
Habitat	285
Disease and Symptoms	286
Food Association	287
Prevention and Control	288
Detection Method	288
A Case Study	288
Listeriosis by <i>Listeria monocytogenes</i>	288
Importance.....	288
Classification	289
Characteristics	290
Habitat	290
Virulence Factors.....	290

Disease and Symptoms	291
Febrile Gastroenteritis.....	291
Invasive Systemic Disease	291
Food Association	293
Prevention and Control	293
Detection Method	294
A Case Study	294
Pathogenic <i>Escherichia coli</i>	294
Importance.....	294
Enterotoxigenic <i>Escherichia coli</i> (ETEC).....	295
Enteropathogenic <i>Escherichia coli</i> (EPEC).....	296
Enteroinvasive <i>Escherichia coli</i> (EIEC)	296
Disease and Symptoms.....	296
Food Association	296
Prevention	297
Enterohemorrhagic <i>Escherichia coli</i> (EHEC).....	297
Gastroenteritis Due to EHEC	297
Characteristics	297
Toxins	297
Disease and Symptoms.....	297
Food Association	298
Prevention	298
Shigellosis (Bacillary Dysentery) by <i>Shigella</i> Species	298
Importance.....	298
Characteristics	299
Habitat	299
Toxins.....	299
Disease and Symptoms	299
Food Association	300
Prevention	300
Campylobacteriosis by <i>Campylobacter</i> Species	301
Importance.....	301
Characteristics	301
Habitat	301
Pathogenic Factors and Toxins	301
Disease and Symptoms	302
Food Association	302
Prevention	303
Yersiniosis by <i>Yersinia enterocolitica</i>	303
Importance.....	303
Characteristics	303
Habitat	303
Virulence Factors.....	304
Disease and Symptoms	304
Food Association	304
Prevention	304
Gastroenteritis by <i>Vibrio</i> Species	304
<i>Vibrio parahaemolyticus</i> Gastroenteritis	305
Importance	305
Characteristics	305
Habitat	305

Toxins and Toxin Production	305
Disease and Symptoms.....	305
Food Association	306
Prevention	306
<i>Vibrio vulnificus</i> Septicemia and Wound Infection	306
Enteric Viruses.....	306
Importance.....	306
Characteristics	307
Habitat	307
Disease and Symptoms	307
Food Association	307
Prevention	308
Detection Method	308
Other Foodborne Infections	308
Brucellosis	308
Streptococcal Infection	309
Q Fever	309
Bovine Spongiform Encephalopathy (BSE)	309
Conclusion	310
References	310
Questions	312

Chapter 26

Foodborne Toxicoinfections	315
Introduction	315
<i>Clostridium perfringens</i> Gastroenteritis	315
Importance.....	315
Characteristics	315
Habitat	316
Toxins and Toxin Production	316
Disease and Symptoms	316
Food Association	316
Prevention	317
Detection Method	317
Analysis of an Outbreak	317
<i>Bacillus cereus</i> Gastroenteritis.....	318
Importance.....	318
Characteristics	318
Habitat	318
Toxins and Toxin Production	318
Disease and Symptoms	318
Food Association	319
Prevention	319
Detection Method	320
Cholera.....	320
Importance.....	320
Characteristics	320
Habitat	321
Toxins and Toxin Production	321
Disease and Symptoms	321

Food Association	321
Prevention	322
Detection Method	322
Analysis of an Outbreak	322
<i>Escherichia coli</i> Gastroenteritis	323
Importance.....	323
Characteristics.....	323
Habitat	323
Toxins and Toxin Production	323
Disease and Symptoms	324
Food Association	324
Prevention	324
Detection Methods	324
Conclusion	324
References	325
Questions	325

Chapter 27

Opportunistic Pathogens, Parasites, and Algal Toxins	327
Introduction	327
Opportunistic Pathogens	327
<i>Aeromonas hydrophila</i>	327
Characteristics	327
Food Association	327
Disease-Causing Potential	327
<i>Plesiomonas shigelloides</i>	328
Characteristics	328
Food Association	328
Disease-Causing Potential	328
Non- <i>Escherichia coli</i> Coliforms.....	328
Toxigenic Psychrotrophic <i>Bacillus</i> Species	329
Biogenic Amines	329
Histamine (Scombroid) Poisoning	329
Algal Toxins	330
Ciguatera Poisoning.....	330
Shellfish Poisoning	331
Paralytic Shellfish Poisoning	331
Neurotoxic Shellfish Poisoning.....	331
Diarrhetic Shellfish Poisoning	331
Parasites.....	331
Trichinosis by <i>Trichinella spiralis</i>	331
Anisakiasis by <i>Anisakis simplex</i>	332
Taeniasis by <i>Taenia</i> Species	332
Toxoplasmosis by <i>Toxoplasma gondii</i>	332
Giardiasis by <i>Giardia lamblia</i>	332
Cryptosporidiosis by <i>Cryptosporidium parvum</i>	333
Cyclosporiasis by <i>Cyclospora cayetanensis</i>	333
Conclusion	333
References	333
Questions	334

Chapter 28	
New and Emerging Foodborne Pathogens	337
Introduction	337
Associated Factors	338
Better Knowledge of Pathogens	338
Improvement in Regulatory Actions	339
Changes in Lifestyle and Food Habits	340
New Food-Processing Technology	342
Miscellaneous Factors	343
Other Emerging Foodborne Pathogens of Concern	345
Conclusion	345
References	346
Questions	346
Chapter 29	
Indicators of Bacterial Pathogens	349
Introduction	349
Criteria for Ideal Indicators	349
Coliform Group	350
Coliforms	350
Organisms and Sources	351
Occurrence and Significance in Food	351
Fecal Coliforms	351
Organisms and Sources	351
Occurrence and Significance in Food	351
<i>Escherichia coli</i>	352
Organisms and Sources	352
Occurrence and Significance in Food	352
Enterobacteriaceae Group	353
<i>Enterococcus</i> Group	354
Characteristics and Habitat	354
Occurrence and Significance in Food	354
Conclusion	354
References	354
Questions	355
Part VI Control of Microorganisms in Foods	357
Chapter 30	
Control of Access (Cleaning and Sanitation)	359
Introduction	359
Objectives of Sanitation	359
Factors to Consider	360
Plant Design	360
Quality of Water, Ice, Brine, and Curing Solution	360
Quality of Air	360
Training of Personnel	360
Equipment	361
Cleaning of Processing Facilities	361
Sanitation of Food-Processing Equipment	361
Chlorine-Based Sanitizers	362

Iodophores	362
Quaternary Ammonium Compounds	363
H ₂ O ₂	363
Decontamination and Sanitization of Fruits and Vegetables	363
Microbiological Standards, Specifications, and Guidelines	364
Conclusion	365
References	365
Questions	365
Chapter 31	
Control by Physical Removal	367
Introduction	367
Physical Methods	367
Centrifugation	367
Filtration	367
Trimming	367
Washing	368
Conclusion	368
References	368
Questions	369
Chapter 32	
Control by Heat	371
Introduction	371
Objectives	371
Mechanism of Thermal Inactivation	372
Influencing Factors	372
Nature of Food	372
Nature of Microorganisms	373
Nature of Process	373
Mathematical Expressions	373
Decimal Reduction Time (D Value)	374
Thermal Death Time (TDT), Z Value, and F Value	375
Methods	375
Low-Heat Processing or Pasteurization	376
High-Heat-Processed Foods	377
Microwave Heating	377
Conclusion	378
References	378
Questions	378
Chapter 33	
Control by Low Temperature	379
Introduction	379
Objectives	380
Mechanisms of Cold Induced Inactivation	380
Influencing Factors	381
Nature of Process	381
Nature of Food	382
Nature of Microorganisms	382
Methods	382
Ice Chilling	382

Refrigeration	383
Freezing	383
Conclusion	383
References	384
Questions	384

Chapter 34

Control by Reduced Water Activity	385
Introduction	385
Objectives.....	385
Mechanism of Action.....	385
Influencing Factors	386
Nature of Process	386
Nature of Foods	386
Nature of Microorganisms	387
Methods	388
Natural Dehydration	388
Mechanical Drying.....	388
Freeze-Drying	389
Foam Drying	389
Smoking	389
Intermediate Moisture Foods	389
Conclusion	390
References	390
Questions	390

Chapter 35

Control by Low pH and Organic Acids	391
Introduction	391
Objectives.....	391
Mechanisms of Antimicrobial Action	391
Influencing Factors	392
Nature of Acids	392
Nature of Foods	393
Nature of Microorganisms	393
Acids Used	393
Acetic Acid	393
Propionic Acid	394
Lactic Acid	394
Citric Acid	395
Sorbic Acid	395
Benzoic Acid	395
Parabens (Esters of p-Hydroxybenzoic Acid)	395
Conclusion	396
References	396
Questions	396

Chapter 36

Control by Modified Atmosphere (or Reducing O–R Potential)	397
Introduction	397
Objectives.....	398
Mechanism of Action.....	398

Influencing Factors	398
Nature of Process	398
Nature of Foods	399
Nature of Microorganisms	399
Methods	399
Vacuum Packaging	399
Gas Flushing	400
Conclusion	400
References	400
Questions	400
Chapter 37	
Control by Antimicrobial Preservatives	403
Introduction	403
Objectives	404
Influencing Factors	404
Examples of Antimicrobial Preservatives	404
Nitrates and Nitrites	405
Sulfur Dioxide (SO ₂) and Sulfites (SO ₃)	405
H ₂ O ₂	406
Epoxides (Ethylene Oxide, Propylene Oxide)	406
Acids	406
Parabens	406
Bacteriocins of Lactic Acid Bacteria	406
Diacetyl	406
CO ₂	406
Butylated Hydroxyanisol (BHA), Butylated Hydroxytoluene (BHT), and <i>t</i> -Butyl Hydroquinone (TBHQ)	407
Chitosan	407
Ethylenediaminetetraacetate (EDTA)	407
Lysozyme	407
Monolaurin (Glycerol Monolaurate)	407
Antibiotics (Tetracyclines, Natamycin, and Tylosin)	408
Wood Smoke	408
Spices	408
Conclusion	409
References	409
Questions	409
Chapter 38	
Control by Irradiation	411
Introduction	411
Irradiation (Radiation) and Radioactivity	411
Use of Irradiation in Food	411
Objectives	412
Mechanisms of Antimicrobial Action	412
Influencing Factors	413
Nature of Process	413
Nature of Foods	413
Nature of Microorganisms	413
Methods	414
Doses	414

Specific Terms	414
Radurization	414
Radicidation	414
Radappertization	414
Current Recommendations	415
UV Radiation	415
Conclusion	415
References	416
Questions	416

Chapter 39

Control by Novel Processing Technologies	417
Introduction	417
Summary of Processing Methods	417
Microwave and Radio-Frequency Processing	417
Ohmic and Inductive Heating	418
Pulsed Electric Fields	418
High-Pressure Processing	418
Pulsed Light Technology	418
Oscillating Magnetic Fields	419
Ultrasound	419
High-Voltage Arc Discharge	419
Pulsed x-Rays	419
Pulsed Electric Field	419
Hydrostatic Pressure Processing	420
History	420
Methods, Mechanisms of Microbial Inactivation, and Advantages	421
Destruction of Microbial Cells	422
Bacterial Cells	422
Bacterial Endospores	423
Molds, Yeasts, Viruses, and Parasites	423
Application in Food Processing	424
Conclusion	426
References	426
Questions	427

Chapter 40

Control by a Combination of Methods (Hurdle Concept)	429
Introduction	429
Mechanisms of Antimicrobial Action	429
Current Status	430
Low-Heat Processing	430
Low Storage Temperature	431
Low pH	431
Low A_w	431
Modified Atmosphere	431
Preservatives	431
Hydrostatic Pressure Processing (HPP)	431
Conclusion	432
References	432
Questions	432

Part VII Microbial Detection and Food Safety..... 433

Chapter 41

Conventional and Biosensor Based Detection Methods for Microorganisms in Food and Food Environment	435
Introduction	435
Methods Used	436
Standard and Recommended Methods	436
Sampling for Microbial Analysis	437
Sample and Sampling Plan	437
Sampling Procedure.....	437
Quantitative Methods for Microbial Enumeration in Foods.....	438
Direct Enumeration	438
Microscopic Counts	438
Colony-Forming Units (CFU) in Nonselective Agar Media	438
CFU in Nonselective Differential Media.....	438
CFU in Selective Agar Media	439
CFU in Selective-Differential Agar Media	439
Indirect Estimation	439
Dilution to Extinction in Nonselective Broths	439
Most Probable Number (MPN) in Selective Broth	439
Dye Reduction Test.....	440
Enumeration of Injured Microbial Groups by Selective Media.....	440
Dilution Scheme, Plating, Incubation, Selection of Plates for Counting CFU, and Reporting Results	440
Qualitative Methods to Isolate Microorganisms in Foods	440
Isolation of Pathogens	440
Test for Bacterial Toxins in Foods	441
Rapid Methods and Automation	441
Metabolic Fingerprinting	442
Immunoassays for Rapid Detection of Pathogens	442
Immunomagnetic Separation (IMS).....	443
Reverse Passive Latex Agglutination (RPLA) Method	444
Enzyme-Linked Immunosorbent Assay (ELISA).....	444
Immunofluorescence Assay	445
Immunochromatographic Lateral Flow Assay	445
Flow Cytometry	445
Bioluminescence Methods	446
Nucleic Acid-Based Methods	446
Hybridization Method	446
Polymerase Chain Reaction (PCR)	447
DNA Fingerprinting	449
Pathogenicity Assay	449
Biosensors for Pathogen Detection	449
Fiber Optic Biosensor	450
Surface Plasmon Resonance Sensor.....	451
Electrochemical Immunosensor	452
Piezoelectric (PZ) Biosensor	452
Impedance-Based Biochip Sensor.....	452
Fourier Transform Infrared Spectroscopy (FTIR)	453
Light Scattering	453

Cell-Based Sensor	453
Conclusion	454
References	455
Questions	457
Appendix A: Microbial Attachment to Food and Equipment Surfaces	459
Importance	459
Mechanisms of Attachment	460
Influencing Factors	460
Control Measures	461
References	461
Appendix B: Predictive Modeling of Microbial Growth in Food	463
Importance	463
Traditional Methods	463
Challenge Studies	463
Storage Studies	464
Accelerated Shelf Life Studies	464
Predictive Microbiology	464
Square Root Model	464
Sigmoidal Model (Gompertz: USDA Model)	465
Conclusion	465
References	465
Appendix C: Regulatory Agencies Monitoring Microbiological Safety of Foods in the United States	467
Food Safety Regulations	467
The Agencies	468
Federal Agencies	468
State and Local Government Agencies	469
International Agencies	469
References	469
Appendix D: Hazard Analysis Critical Control Points	471
Introduction	471
HACCP Principle of the NACMCF	471
Seven Principles of HACCP	472
Brief Description of the Principles	472
Principle 1	472
Principle 2	473
Principle 3	473
Principle 4	473
Principle 5	473
Principle 6	473
Principle 7	473
Conclusion	474
