# DIGITAL COLOR IMAGE PROCESSING

ANDREAS KOSCHAN  
MONGI ABIDI

# TABLE OF CONTENTS

Preface	xiii
Acknowledgment	xv
<b>1 Introduction</b>	<b>1</b>
1.1 Goal and Content of this Book	4
1.2 Terminology in Color Image Processing	5
1.2.1 What Is a Digital Color Image?	6
1.2.2 Derivative of a Color Image	8
1.2.3 Color Edges	9
1.2.4 Color Constancy	10
1.2.5 Contrast of a Color Image	11
1.2.6 Noise in Color Images	13
1.2.7 Luminance, Illuminance, and Brightness	13
1.3 Color Image Analysis in Practical Use	14
1.3.1 Color Image Processing in Medical Applications	15
1.3.2 Color Image Processing in Food Science and Agriculture	16
1.3.3 Color Image Processing in Industrial Manufacturing and Nondestructive Materials Testing	17
1.3.4 Additional Applications of Color Image Processing	17
1.3.5 Digital Video and Image Databases	18
1.4 Further Reading	18
1.5 References	19
<b>2 Eye and Color</b>	<b>23</b>
2.1 Physiology of Color Vision	24
2.2 Receptor Color Information	25
2.3 Postreceptor Color Information	29
2.3.1 Neurophysiology of Retinal Ganglia Cells	30
2.3.2 Reaction of Retinal Ganglia Cells to Colored Light Stimuli	30
2.4 Cortical Color Information	32
2.5 Color Constant Perception and Retinex Theory	32
2.6 References	34
<b>3 Color Spaces and Color Distances</b>	<b>37</b>
3.1 Standard Color System	37
3.1.1 CIE Color Matching Functions	39

3.1.2	Standard Color Values	40
3.1.3	Chromaticity Diagrams	41
3.1.4	MacAdam Ellipses	43
3.2	Physics and Technics-Based Color Spaces	44
3.2.1	<i>RGB</i> Color Spaces	45
3.2.2	<i>CMY(K)</i> Color Space	48
3.2.3	<i>YIQ</i> Color Space	49
3.2.4	<i>YUV</i> Color Space	50
3.2.5	$YC_B C_R$ Color Space	51
3.2.6	Kodak PhotoCD $YC_1 C_2$ Color Space	52
3.2.7	$I_1 I_2 I_3$ Color Space	53
3.3	Uniform Color Spaces	53
3.3.1	CIELAB Color Space	53
3.3.2	CIELUV Color Space	55
3.4	Perception-Based Color Spaces	57
3.4.1	<i>HSI</i> Color Space	58
3.4.2	<i>HSV</i> Color Space	60
3.4.3	Opponent Color Spaces	62
3.5	Color Difference Formulas	62
3.5.1	Color Difference Formulas in the <i>RGB</i> Color Space	63
3.5.2	Color Difference Formulas in the <i>HSI</i> Color Space	63
3.5.3	Color Difference Formulas in the CIELAB and CIELUV Color Spaces	64
3.6	Color Ordering Systems	65
3.6.1	Munsell Color System	66
3.6.2	Macbeth ColorChecker	66
3.6.3	DIN Color Map	67
3.7	Further Reading	68
3.8	References	69
<b>4</b>	<b>Color Image Formation</b>	<b>71</b>
4.1	Technical Design of Electronic Color Cameras	71
4.1.1	Image Sensors	72
4.1.2	Multispectral Imaging Using Black-and-White Cameras with Color Filters	74
4.1.3	One-Chip CCD Color Camera	74
4.1.4	Three-Chip CCD Color Cameras	76
4.1.5	Digital Cameras	77
4.2	Standard Color Filters and Standard Illuminants	78
4.2.1	Standard Color Filters	78
4.2.2	Standard Illuminants	80
4.3	Photometric Sensor Model	82
4.3.1	Attenuation, Clipping, and Blooming	83
4.3.2	Chromatic Aberration	85
4.3.3	Correction of the Chromatic Aberration	87
4.4	Photometric and Colorimetric Calibration	88
4.4.1	Nonlinearities of Camera Signals	89

4.4.2	Measurement of Camera Linearity	91
4.4.3	White Balance and Black-Level Determination	91
4.4.4	Transformation into the Standard Color System $XYZ$	93
4.5	Further Reading	96
4.6	References	96
<b>5</b>	<b>Color Image Enhancement</b>	<b>99</b>
5.1	False Colors and Pseudocolors	100
5.2	Enhancement of Real Color Images	102
5.3	Noise Removal in Color Images	102
5.3.1	Box-Filter	103
5.3.2	Median Filter	104
5.3.3	Morphological Filter	115
5.3.4	Filtering in the Frequency Domain	116
5.4	Contrast Enhancement in Color Images	117
5.4.1	Treatment of Color Saturation and Lightness	118
5.4.2	Changing the Hue	121
5.5	References	122
<b>6</b>	<b>Edge Detection in Color Images</b>	<b>125</b>
6.1	Vector-Valued Techniques	126
6.1.1	Color Variants of the Canny Operator	126
6.1.2	Cumani Operator	128
6.1.3	Operators Based on Vector Order Statistics	132
6.2	Results of Color Edge Operators	135
6.3	Classification of Edges	139
6.3.1	Physics-Based Classification	140
6.3.2	Classification Applying Photometric Invariant Gradients	142
6.4	Color Harris Operator	143
6.5	References	145
<b>7</b>	<b>Color Image Segmentation</b>	<b>149</b>
7.1	Pixel-Based Segmentation	150
7.1.1	Histogram Techniques	151
7.1.2	Cluster Analysis in the Color Space	153
7.2	Area-Based Segmentation	153
7.2.1	Region-Growing Techniques	154
7.2.2	Split-and-Merge Techniques	154
7.3	Edge-Based Segmentation	156
7.3.1	Local Techniques	156
7.3.2	Segmentation by Watershed Transformation	157
7.3.3	Use of Watershed Transformation in Graphs	161
7.3.4	Expansion of the Watershed Transformation for Color Images	163
7.4	Physics-Based Segmentation	164
7.4.1	Dichromatic Reflection Model	167
7.4.2	Classification Techniques	169

7.5	Comparison of Segmentation Processes	172
7.6	References	174
<b>8</b>	<b>Highlights, Interreflections, and Color Constancy</b>	<b>177</b>
8.1	Highlight Analysis in Color Images	177
8.1.1	Klinker-Shafer-Kanade Technique	178
8.1.2	Tong-Funt Technique	181
8.1.3	Gershon-Jepson-Tsotsos Technique	181
8.1.4	Schlüns-Teschner Technique	183
8.1.5	Spectral Differencing Using Several Images	186
8.1.6	Photometric Multi-Image Technique	188
8.1.7	Polarization Technique	189
8.2	Interreflection Analysis in Color Images	194
8.2.1	One-Bounce Model for Interreflections	195
8.2.2	Determination of the One-Bounce Color Portion	197
8.2.3	Quarter-Circle Analysis	198
8.2.4	Minimization of Interreflections in Real Color Images	200
8.2.5	Segmentation with Consideration to Interreflections and Shadows	200
8.2.6	Determination of Interreflection Areas	201
8.2.7	Analysis of Shadow	202
8.2.8	Minimization of Interreflections	202
8.3	Color Constancy	204
8.3.1	Mathematical Formulation of the Color Constancy Problem	205
8.3.2	Techniques for Color Constancy	207
8.4	References	212
<b>9</b>	<b>Static Stereo Analysis in Color Images</b>	<b>219</b>
9.1	Geometry of a Stereo Image Acquisition System	220
9.2	Area-Based Correspondence Analysis	224
9.2.1	Dense Disparity Maps by Block Matching	224
9.2.2	Chromatic Block Matching for Color Stereo Analysis	227
9.2.3	Hierarchical Block Matching in a Color Image Pyramid	233
9.2.4	Stereo Analysis with Color Pattern Projection	237
9.3	Feature-Based Correspondence Analysis	244
9.3.1	Edge-Based Correspondence Analysis	245
9.3.2	General Ideas	250
9.4	References	251
<b>10</b>	<b>Dynamic and Photometric Stereo Analyses in Color Images</b>	<b>253</b>
10.1	Optical Flow	254
10.1.1	Solution Strategy	254
10.1.2	Horn-Schunck Constraint for Color Image Sequences	255
10.2	Photometric Stereo Analysis	260
10.2.1	Photometric Stereo Analysis for Nonstatic Scenes	261
10.2.2	Photometric Stereo Analysis for Non-Lambertian Surfaces	263

10.3	References	264
<b>11</b>	<b>Color-Based Tracking with PTZ Cameras</b>	<b>267</b>
11.1	The Background Problem	268
11.2	Methods for Tracking	270
11.2.1	Active Shape Models	272
11.2.2	Automatic Target Acquisition and Handover from Fixed to PTZ Camera	272
11.2.3	Color and Predicted Direction and Speed of Motion	273
11.3	Technical Aspects of Tracking	274
11.3.1	Feature Extraction for Zooming and Tracking	274
11.3.2	Color Extraction from a Moving Target	277
11.4	Color Active Shape Models	282
11.4.1	Landmark Points	283
11.4.2	Principal Component Analysis	283
11.4.3	Model Fitting	285
11.4.4	Modeling a Local Structure	286
11.4.5	Hierarchical Approach for Multiresolution ASM	287
11.4.6	Extending ASMs to Color Image Sequences	288
11.4.7	Partial Occlusions	294
11.4.8	Summary	296
11.5	References	297
<b>12</b>	<b>Multispectral Imaging for Biometrics</b>	<b>301</b>
12.1	What is a Multispectral Image?	301
12.2	Multispectral Image Acquisition	302
12.3	Fusion of Visible and Infrared Images for Face Recognition	307
12.3.1	Registration of Visible and Thermal Face Images	309
12.3.2	Empirical Mode Decomposition	311
12.3.3	Image Fusion Using EMD	313
12.3.4	Experimental Results	315
12.4	Multispectral Image Fusion in the Visible Spectrum for Face Recognition	318
12.4.1	Physics-Based Weighted Fusion	318
12.4.2	Illumination Adjustment via Data Fusion	322
12.4.3	Wavelet Fusion	323
12.4.4	CMC Measure	324
12.4.5	Multispectral, Multimodal, and Multi-illuminant IRIS-M <sup>3</sup> Database	325
12.4.6	Experimental Results	329
12.5	References	334
<b>13</b>	<b>Pseudocoloring in Single-Energy X-Ray Images</b>	<b>339</b>
13.1	Problem Statement	339
13.2	Aspects of the Human Perception of Color	341
13.2.1	Physiological Processing of Color	341
13.2.2	Psychological Processing of Color	342

13.2.3	General Recommendations for Optimum Color Assignment	343
13.2.4	Physiologically Based Guidelines	344
13.2.5	Psychologically Based Guidelines	344
13.3	Theoretical Aspects of Pseudocoloring	345
13.4	<i>RGB</i> -Based Colormaps	348
13.4.1	Perceptually Based Colormaps	348
13.4.2	Mathematical Formulations	351
13.5	<i>HSI</i> -Based Colormaps	354
13.5.1	Mapping of Raw Grayscale Data	355
13.5.2	Color Applied to Preprocessed Grayscale Data	357
13.6	Experimental Results	358
13.6.1	Color-Coded Images Generated by <i>RGB</i> -Based Transforms	359
13.6.2	Color-Coded Images Generated by <i>HSI</i> -Based Transforms	362
13.7	Performance Evaluation	362
13.7.1	Preliminary Online Survey	365
13.7.2	Formal Airport Evaluation	366
13.8	Conclusion	370
13.9	References	371
