

# MICROBIAL FUEL CELLS

Bruce E. Logan

# Contents

---

<b>PREFACE</b>	<b>xi</b>
<b>1. INTRODUCTION</b>	<b>1</b>
1.1. Energy needs / 1	
1.2. Energy and the challenge of global climate change / 2	
1.3. Bioelectricity generation using a microbial fuel cell—the process of electrogenesis / 4	
1.4. MFCs and energy sustainability of the water infrastructure / 6	
1.5. MFC technologies for wastewater treatment / 7	
1.6. Renewable energy generation using MFCs / 9	
1.7. Other applications of MFC technologies / 11	
<b>2. EXOELECTROGENS</b>	<b>12</b>
2.1. Introduction / 12	
2.2. Mechanisms of electron transfer / 13	
2.3. MFC studies using known exoelectrogenic strains / 18	
2.4. Community analysis / 22	
2.5. MFCs as tools for studying exoelectrogenerators / 27	
<b>3. VOLTAGE GENERATION</b>	<b>29</b>
3.1. Voltage and current / 29	
3.2. Maximum voltages based on thermodynamic relationships / 30	
3.3. Anode potentials and enzyme potentials / 36	
3.4. Role of communities versus enzymes in setting anode potentials / 40	
3.5. Voltage generation by fermentative bacteria? / 41	
<b>4. POWER GENERATION</b>	<b>44</b>
4.1. Calculating power / 44	
4.2. Coulombic and energy efficiency / 48	
4.3. Polarization and power density curves / 50	

4.4. Measuring internal resistance /	54
4.5. Chemical and electrochemical analysis of reactors /	57
<b>5. MATERIALS</b>	<b>61</b>
5.1. Finding low-cost, highly efficient materials /	61
5.2. Anode materials /	62
5.3. Membranes and separators (and chemical transport through them) /	68
5.4. Cathode materials /	76
5.5. Long-term stability of different materials /	83
<b>6. ARCHITECTURE</b>	<b>85</b>
6.1. General requirements /	85
6.2. Air-cathode MFCs /	86
6.3. Aqueous cathodes using dissolved oxygen /	95
6.4. Two-chamber reactors with soluble catholytes or poised potentials /	97
6.5. Tubular packed bed reactors /	102
6.6. Stacked MFCs /	104
6.7. Metal catholytes /	105
6.8. Biohydrogen MFCs /	108
6.9. Towards a scalable MFC architecture /	110
<b>7. KINETICS AND MASS TRANSFER</b>	<b>111</b>
7.1. Kinetic- or mass transfer-based models? /	111
7.2. Boundaries on rate constants and bacterial characteristics /	112
7.3. Maximum power from a monolayer of bacteria /	116
7.4. Maximum rate of mass transfer to a biofilm /	118
7.5. Mass transfer per reactor volume /	122
<b>8. MECs FOR HYDROGEN PRODUCTION</b>	<b>125</b>
8.1. Principle of operation /	125
8.2. MEC systems /	127
8.3. Hydrogen yield /	131
8.4. Hydrogen recovery /	132
8.5. Energy recovery /	134
8.6. Hydrogen losses /	142
8.7. Differences between the MEC and MFC systems /	145
<b>9. MFCs FOR WASTEWATER TREATMENT</b>	<b>146</b>
9.1. Process trains for WWTPs /	146
9.2. Replacement of the biological treatment reactor with an MFC /	149
9.3. Energy balances for WWTPs /	154
9.4. Implications for reduced sludge generation /	157
9.5. Nutrient removal /	158
9.6. Electrogenesis versus methanogenesis /	159

<b>10. OTHER MFC TECHNOLOGIES</b>	<b>162</b>
10.1. Different applications for MFC-based technologies / 162	
10.2. Sediment MFCs / 162	
10.3. Enhanced sediment MFCs / 166	
10.4. Bioremediation using MFC technologies / 168	
<b>11. FUN!</b>	<b>171</b>
11.1 MFCs for new scientists and inventors / 171	
11.2 Choosing your inoculum and media / 174	
11.3 MFC materials: electrodes and membranes / 175	
11.4 MFC architectures that are easy to build / 176	
11.5 MEC reactors / 180	
11.6 Operation and assessment of MFCs / 181	
<b>12. OUTLOOK</b>	<b>182</b>
12.1 MFCs yesterday and today / 182	
12.2 Challenges for bringing MFCs to commercialization / 183	
12.3 Accomplishments and outlook / 184	
<b>NOTATION</b>	<b>186</b>
