

# Cellular and Molecular Neurophysiology

THIRD EDITION

CONSTANCE HAMMOND

# Contents

---

**List of Contributors** vii

**Foreword** ix

**Acknowledgements** x

- 1 Neurons 1
- 2 Neuron–glial cell cooperation 21
- 3 Ionic gradients, membrane potential and ionic currents 29
- 4 The voltage-gated channels of Na<sup>+</sup> action potentials 45
- 5 The voltage-gated channels of Ca<sup>2+</sup> action potentials: Generalization 83
- 6 The chemical synapses 111
- 7 Neurotransmitter release 134
- 8 The ionotropic nicotinic acetylcholine receptors 160
- 9 The ionotropic GABA<sub>A</sub> receptor 186
- 10 The ionotropic glutamate receptors 209
- 11 The metabotropic GABA<sub>B</sub> receptors 232

- 12 The metabotropic glutamate receptors 256
- 13 Somato-dendritic processing of postsynaptic potentials I: Passive properties of dendrites 271
- 14 Subliminal voltage-gated currents of the somato-dendritic membrane 279
- 15 Somato-dendritic processing of postsynaptic potentials II: Role of subliminal depolarizing voltage-gated currents 294
- 16 Somato-dendritic processing of postsynaptic potentials III: Role of high-voltage-activated depolarizing currents 308
- 17 Firing patterns of neurons 325
- 18 Synaptic plasticity 342
- 19 The adult hippocampal network 368
- 20 Maturation of the hippocampal network 386
