

Vol. 1

Series on Biomaterials and Bioengineering

An Introduction to BIOCOMPOSITES

Seeram Ramakrishna
Zheng-Ming Huang
Ganesh V Kumar
Andrew W Batchelor
Joerg Mayer

Imperial College Press

CONTENTS

<i>Foreword</i>	v
<i>Acknowledgements</i>	vii
1. Introduction	1
1.1 Biomaterials	1
1.2 Potential of Biocomposites for Medical Applications	4
1.3 Classification of Composite Materials	9
1.4 Scope of this Book	13
References	15
2. Biocompatibility	18
2.1 The Environment Within the Human Body	18
2.2 Durability of Artificial Implant Materials in the Body	19
2.3 Physiological Interactions Between Implant Materials and the Body	19
2.4 Structural Biocompatibility	23
2.5 Example of Biocompatible Implants	25
2.6 Sterilization Techniques and the Testing of Biocompatibility	26
2.7 Imaging of Biocomposites after Implantation	31
2.8 Summary	31
References	32
3. Constituent, Fabrication, and Characterization	35
3.1 Reinforcement Materials	35
3.2 Reinforcement Forms	40

3.3	Matrix Materials	45
3.4	Fabrication	46
3.5	Characterization	59
	References	67
4.	Mechanics of Composite Materials	70
4.1	Introduction	70
4.2	Fiber Volume Fraction	71
4.3	Elastic Properties of Composite Materials	72
4.4	Strength of Composite Materials	76
4.5	Effect of Fiber Orientation on Elastic Properties	81
4.6	Elastic Properties of Multi-Ply Laminates	84
4.7	Textile Composites	91
4.8	Behavior of Composite Properties	92
	References	130
5.	Designing with Composite Materials	131
5.1	Design Considerations	131
5.2	Design Process	133
5.3	Materials Design	137
5.4	Component Design	139
	References	142
6.	Biomedical Applications of Polymer Composites	143
6.1	Hard Tissue Applications	143
6.2	Soft Tissue Applications	161
6.3	Other Biomedical Applications	165
	References	166
7.	Case Studies	175
7.1	Dental Applications	175
7.2	Orthopedics Applications	190
7.3	Prosthetic Socket Application	194
7.4	External Fixator Application	201
7.5	Conclusion	206
	References	206
	<i>Glossary</i>	<i>210</i>
