PART I

AI AND GAMES	1
--------------	---

CHAPTER

1

INTRODUCTION	3
1.1 WHAT IS AI?	4
1.1.1 Academic AI	5
1.1.2 Game AI	7
1.2 MY MODEL OF GAME AI	9
1.2.1 Movement	10
1.2.2 Decision Making	10
1.2.3 Strategy	11
1.2.4 Infrastructure	11
1.2.5 Agent-Based AI	12
1.2.6 In the Book	12
1.3 ALGORITHMS, DATA STRUCTURES, AND REPRESENTATIONS	13
1.3.1 Algorithms	13
1.3.2 Representations	16

1.4	ON THE CD	17
1.4.1	Programs	17
1.4.2	Libraries	18
1.5	LAYOUT OF THE BOOK	19

CHAPTER

2**GAME AI**

21

2.1	THE COMPLEXITY FALLACY	21
2.1.1	When Simple Things Look Good	21
2.1.2	When Complex Things Look Bad	22
2.1.3	The Perception Window	23
2.1.4	Changes of Behavior	23
2.2	THE KIND OF AI IN GAMES	24
2.2.1	Hacks	24
2.2.2	Heuristics	25
2.2.3	Algorithms	27
2.3	SPEED AND MEMORY	27
2.3.1	Processor Issues	28
2.3.2	Memory Concerns	31
2.3.3	PC Constraints	32
2.3.4	Console Constraints	32
2.4	THE AI ENGINE	35
2.4.1	Structure of an AI Engine	35
2.4.2	Toolchain Concerns	37
2.4.3	Putting It All Together	38

PART II**TECHNIQUES****39**

CHAPTER

3**MOVEMENT**

41

3.1	THE BASICS OF MOVEMENT ALGORITHMS	42
3.1.1	Two-Dimensional Movement	43
3.1.2	Statics	44
3.1.3	Kinematics	47
3.2	KINEMATIC MOVEMENT ALGORITHMS	51
3.2.1	Seek	52
3.2.2	Wandering	55

3.2.3	On the CD	57
3.3	STEERING BEHAVIORS	57
3.3.1	Steering Basics	58
3.3.2	Variable Matching	58
3.3.3	Seek and Flee	59
3.3.4	Arrive	62
3.3.5	Align	66
3.3.6	Velocity Matching	69
3.3.7	Delegated Behaviors	70
3.3.8	Pursue and Evade	71
3.3.9	Face	74
3.3.10	Looking Where You're Going	75
3.3.11	Wander	76
3.3.12	Path Following	79
3.3.13	Separation	85
3.3.14	Collision Avoidance	88
3.3.15	Obstacle and Wall Avoidance	94
3.3.16	Summary	99
3.4	COMBINING STEERING BEHAVIORS	100
3.4.1	Blending and Arbitration	100
3.4.2	Weighted Blending	101
3.4.3	Priorities	107
3.4.4	Cooperative Arbitration	111
3.4.5	Steering Pipeline	113
3.5	PREDICTING PHYSICS	126
3.5.1	Aiming and Shooting	126
3.5.2	Projectile Trajectory	127
3.5.3	The Firing Solution	129
3.5.4	Projectiles with Drag	132
3.5.5	Iterative Targeting	134
3.6	JUMPING	140
3.6.1	Jump Points	141
3.6.2	Landing Pads	145
3.6.3	Hole Fillers	149
3.7	COORDINATED MOVEMENT	151
3.7.1	Fixed Formations	151
3.7.2	Scalable Formations	153
3.7.3	Emergent Formations	153
3.7.4	Two-Level Formation Steering	155
3.7.5	Implementation	158
3.7.6	Extending to More than Two Levels	165
3.7.7	Slot Roles and Better Assignment	167

3.7.8	Slot Assignment	169
3.7.9	Dynamic Slots and Plays	174
3.7.10	Tactical Movement	177
3.8	MOTOR CONTROL	180
3.8.1	Output Filtering	181
3.8.2	Capability-Sensitive Steering	183
3.8.3	Common Actuation Properties	184
3.9	MOVEMENT IN THE THIRD DIMENSION	187
3.9.1	Rotation in Three Dimensions	188
3.9.2	Converting Steering Behaviors to Three Dimensions	189
3.9.3	Align	190
3.9.4	Align to Vector	191
3.9.5	Face	192
3.9.6	Look Where You're Going	195
3.9.7	Wander	195
3.9.8	Faking Rotation Axes	198

CHAPTER

4

PATHFINDING

		203
4.1	THE PATHFINDING GRAPH	204
4.1.1	Graphs	205
4.1.2	Weighted Graphs	206
4.1.3	Directed Weighted Graphs	208
4.1.4	Terminology	209
4.1.5	Representation	210
4.2	DIJKSTRA	211
4.2.1	The Problem	211
4.2.2	The Algorithm	212
4.2.3	Pseudo-Code	216
4.2.4	Data Structures and Interfaces	219
4.2.5	Performance of Dijkstra	221
4.2.6	Weaknesses	221
4.3	A*	223
4.3.1	The Problem	223
4.3.2	The Algorithm	223
4.3.3	Pseudo-Code	227
4.3.4	Data Structures and Interfaces	231
4.3.5	Implementation Notes	235
4.3.6	Algorithm Performance	236
4.3.7	Node Array A*	236
4.3.8	Choosing a Heuristic	239

4.4	WORLD REPRESENTATIONS	246
4.4.1	Tile Graphs	248
4.4.2	Dirichlet Domains	251
4.4.3	Points of Visibility	253
4.4.4	Polygonal Meshes	255
4.4.5	Non-Translational Problems	260
4.4.6	Cost Functions	261
4.4.7	Path Smoothing	262
4.5	IMPROVING ON A*	264
4.6	HIERARCHICAL PATHFINDING	265
4.6.1	The Hierarchical Pathfinding Graph	265
4.6.2	Pathfinding on the Hierarchical Graph	269
4.6.3	Hierarchical Pathfinding on Exclusions	272
4.6.4	Strange Effects of Hierarchies on Pathfinding	272
4.6.5	Instanced Geometry	275
4.7	OTHER IDEAS IN PATHFINDING	281
4.7.1	Open Goal Pathfinding	282
4.7.2	Dynamic Pathfinding	282
4.7.3	Other Kinds of Information Reuse	283
4.7.4	Low Memory Algorithms	283
4.7.5	Interruptible Pathfinding	285
4.7.6	Pooling Planners	285
4.8	CONTINUOUS TIME PATHFINDING	286
4.8.1	The Problem	286
4.8.2	The Algorithm	288
4.8.3	Implementation Notes	292
4.8.4	Performance	292
4.8.5	Weaknesses	293
4.9	MOVEMENT PLANNING	293
4.9.1	Animations	293
4.9.2	Movement Planning	295
4.9.3	Example	297
4.9.4	Footfalls	298

CHAPTER

5

DECISION MAKING 301

5.1	OVERVIEW OF DECISION MAKING	301
5.2	DECISION TREES	303
5.2.1	The Problem	303
5.2.2	The Algorithm	304

5.2.3	Pseudo-Code	309
5.2.4	On the CD	311
5.2.5	Knowledge Representation	311
5.2.6	Implementation Nodes	312
5.2.7	Performance of Decision Trees	312
5.2.8	Balancing the Tree	312
5.2.9	Beyond the Tree	314
5.2.10	Random Decision Trees	315
5.3	STATE MACHINES	318
5.3.1	The Problem	320
5.3.2	The Algorithm	320
5.3.3	Pseudo-Code	320
5.3.4	Data Structures and Interfaces	321
5.3.5	On the CD	324
5.3.6	Performance	325
5.3.7	Implementation Notes	325
5.3.8	Hard-Coded FSM	325
5.3.9	Hierarchical State Machines	327
5.3.10	Combining Decision Trees and State Machines	341
5.4	FUZZY LOGIC	344
5.4.1	Introduction to Fuzzy Logic	344
5.4.2	Fuzzy Logic Decision Making	354
5.4.3	Fuzzy State Machines	364
5.5	MARKOV SYSTEMS	369
5.5.1	Markov Processes	370
5.5.2	Markov State Machine	373
5.6	GOAL-ORIENTED BEHAVIOR	376
5.6.1	Goal-Oriented Behavior	377
5.6.2	Simple Selection	378
5.6.3	Overall Utility	380
5.6.4	Timing	383
5.6.5	Overall Utility GOAP	388
5.6.6	GOAP with IDA*	394
5.6.7	Smelly GOB	401
5.7	RULE-BASED SYSTEMS	403
5.7.1	The Problem	404
5.7.2	The Algorithm	409
5.7.3	Pseudo-Code	410
5.7.4	Data Structures and Interfaces	411
5.7.5	Implementation Notes	416
5.7.6	Rule Arbitration	418
5.7.7	Unification	420

5.7.8	Rete	422
5.7.9	Extensions	433
5.7.10	Where Next	436
5.8	BLACKBOARD ARCHITECTURES	436
5.8.1	The Problem	437
5.8.2	The Algorithm	437
5.8.3	Pseudo-Code	439
5.8.4	Data Structures and Interfaces	440
5.8.5	Performance	442
5.8.6	Other Things Are Blackboard Systems	443
5.9	SCRIPTING	444
5.9.1	Language Facilities	445
5.9.2	Embedding	446
5.9.3	Choosing a Language	447
5.9.4	A Language Selection	449
5.9.5	Rolling Your Own	453
5.9.6	Scripting Languages and Other AI	459
5.10	ACTION EXECUTION	459
5.10.1	Types of Action	460
5.10.2	The Algorithm	464
5.10.3	Pseudo-Code	465
5.10.4	Data Structures and Interfaces	467
5.10.5	Implementation Notes	469
5.10.6	Performance	470
5.10.7	Putting It All Together	470

CHAPTER

6

TACTICAL AND STRATEGIC AI

6.1	WAYPOINT TACTICS	473
6.1.1	Tactical Locations	474
6.1.2	Using Tactical Locations	483
6.1.3	Generating the Tactical Properties of a Waypoint	488
6.1.4	Automatically Generating the Waypoints	494
6.1.5	The Condensation Algorithm	495
6.2	TACTICAL ANALYSES	499
6.2.1	Representing the Game Level	500
6.2.2	Simple Influence Maps	500
6.2.3	Terrain Analysis	508
6.2.4	Learning with Tactical Analyses	510
6.2.5	A Structure for Tactical Analyses	512
6.2.6	Map Flooding	517

6.2.7	Convolution Filters	521
6.2.8	Cellular Automata	533
6.3	TACTICAL PATHFINDING	538
6.3.1	The Cost Function	538
6.3.2	Tactic Weights and Concern Blending	538
6.3.3	Modifying the Pathfinding Heuristic	541
6.3.4	Tactical Graphs for Pathfinding	542
6.3.5	Using Tactical Waypoints	542
6.4	COORDINATED ACTION	543
6.4.1	Multi-Tier AI	544
6.4.2	Emergent Cooperation	551
6.4.3	Scripting Group Actions	554
6.4.4	Military Tactics	559

CHAPTER

7

LEARNING	563
-----------------	-----

7.1	LEARNING BASICS	563
7.1.1	Online or Offline Learning	564
7.1.2	Intra-Behavior Learning	564
7.1.3	Inter-Behavior Learning	565
7.1.4	A Warning	565
7.1.5	Over-learning	566
7.1.6	The Zoo of Learning Algorithms	566
7.1.7	The Balance of Effort	567
7.2	PARAMETER MODIFICATION	567
7.2.1	The Parameter Landscape	567
7.2.2	Hill Climbing	569
7.2.3	Extensions to Basic Hill Climbing	572
7.2.4	Annealing	576
7.3	ACTION PREDICTION	580
7.3.1	Left or Right	581
7.3.2	Raw Probability	581
7.3.3	String Matching	582
7.3.4	N-Grams	582
7.3.5	Window Size	586
7.3.6	Hierarchical N-Grams	588
7.3.7	Application in Combat	591
7.4	DECISION LEARNING	591
7.4.1	Structure of Decision Learning	592
7.4.2	What Should You Learn?	592
7.4.3	Three Techniques	593

7.5	DECISION TREE LEARNING	593
7.5.1	ID3	594
7.5.2	ID3 with Continuous Attributes	602
7.5.3	Incremental Decision Tree Learning	607
7.6	REINFORCEMENT LEARNING	612
7.6.1	The Problem	613
7.6.2	The Algorithm	613
7.6.3	Pseudo-Code	617
7.6.4	Data Structures and Interfaces	618
7.6.5	Implementation Notes	619
7.6.6	Performance	619
7.6.7	Tailoring Parameters	619
7.6.8	Weaknesses and Realistic Applications	623
7.6.9	Other Ideas in Reinforcement Learning	626
7.7	ARTIFICIAL NEURAL NETWORKS	628
7.7.1	Overview	629
7.7.2	The Problem	632
7.7.3	The Algorithm	633
7.7.4	Pseudo-Code	636
7.7.5	Data Structures and Interfaces	638
7.7.6	Implementation Caveats	640
7.7.7	Performance	641
7.7.8	Other Approaches	641

CHAPTER

8

	BOARD GAMES	647
8.1	GAME THEORY	648
8.1.1	Types of Games	648
8.1.2	The Game Tree	650
8.2	MINIMAXING	652
8.2.1	The Static Evaluation Function	652
8.2.2	Minimaxing	654
8.2.3	The Minimaxing Algorithm	656
8.2.4	Negamaxing	659
8.2.5	AB Pruning	661
8.2.6	The AB Search Window	665
8.2.7	Negascout	666
8.3	TRANSPPOSITION TABLES AND MEMORY	670
8.3.1	Hashing Game States	670
8.3.2	What to Store in the Table	673
8.3.3	Hash Table Implementation	674

8.3.4	Replacement Strategies	676
8.3.5	A Complete Transposition Table	676
8.3.6	Transposition Table Issues	677
8.3.7	Using Opponent's Thinking Time	678
8.4	MEMORY-ENHANCED TEST ALGORITHMS	678
8.4.1	Implementing Test	678
8.4.2	The MTD Algorithm	681
8.4.3	Pseudo-Code	682
8.5	OPENING BOOKS AND OTHER SET PLAYS	683
8.5.1	Implementing an Opening Book	684
8.5.2	Learning for Opening Books	684
8.5.3	Set Play Books	685
8.6	FURTHER OPTIMIZATIONS	685
8.6.1	Iterative Deepening	686
8.6.2	Variable Depth Approaches	687
8.7	TURN-BASED STRATEGY GAMES	688
8.7.1	Impossible Tree Size	689
8.7.2	Real-Time AI in a Turn-Based Game	690

PART III

SUPPORTING TECHNOLOGIES

691

CHAPTER

9

EXECUTION MANAGEMENT

693

9.1	SCHEDULING	694
9.1.1	The Scheduler	694
9.1.2	Interruptible Processes	702
9.1.3	Load-Balancing Scheduler	705
9.1.4	Hierarchical Scheduling	707
9.1.5	Priority Scheduling	709
9.2	ANYTIME ALGORITHMS	712
9.3	LEVEL OF DETAIL	712
9.3.1	Graphics Level of Detail	713
9.3.2	AI LOD	713
9.3.3	Scheduling LOD	714
9.3.4	Behavioral LOD	715
9.3.5	Group LOD	721
9.3.6	In Summary	724

CHAPTER

10**WORLD INTERFACING**

	727
10.1 COMMUNICATION	727
10.2 GETTING KNOWLEDGE EFFICIENTLY	728
10.2.1 Polling	728
10.2.2 Events	729
10.2.3 Determining What Approach to Use	730
10.3 EVENT MANAGERS	730
10.3.1 Implementation	733
10.3.2 Event Casting	736
10.3.3 Inter-Agent Communication	738
10.4 POLLING STATIONS	739
10.4.1 Pseudo-Code	739
10.4.2 Performance	740
10.4.3 Implementation Notes	740
10.4.4 Abstract Polling	741
10.5 SENSE MANAGEMENT	742
10.5.1 Faking It	743
10.5.2 What Do I Know?	743
10.5.3 Sensory Modalities	744
10.5.4 Region Sense Manager	750
10.5.5 Finite Element Model Sense Manager	758

CHAPTER

11**TOOLS AND CONTENT CREATION**

	769
11.0.1 Toolchains Limit AI	770
11.0.2 Where AI Knowledge Comes from	770
11.1 KNOWLEDGE FOR PATHFINDING AND WAYPOINT TACTICS	770
11.1.1 Manually Creating Region Data	771
11.1.2 Automatic Graph Creation	774
11.1.3 Geometric Analysis	774
11.1.4 Data Mining	778
11.2 KNOWLEDGE FOR MOVEMENT	780
11.2.1 Obstacles	780
11.2.2 High-Level Staging	782
11.3 KNOWLEDGE FOR DECISION MAKING	783
11.3.1 Object Types	783
11.3.2 Concrete Actions	783
11.4 THE TOOLCHAIN	784

11.4.1	Data-Driven Editors	784
11.4.2	AI Design Tools	785
11.4.3	Remote Debugging	786
11.4.4	Plug-Ins	787

PART IV

DESIGNING GAME AI

789

CHAPTER

12

DESIGNING GAME AI

791

12.1	THE DESIGN	791
12.1.1	Example	792
12.1.2	Evaluating the Behaviors	793
12.1.3	Selecting Techniques	796
12.1.4	The Scope of One Game	798
12.2	SHOOTERS	798
12.2.1	Movement and Firing	799
12.2.2	Decision Making	801
12.2.3	Perception	802
12.2.4	Pathfinding and Tactical AI	802
12.2.5	Shooter-Like Games	803
12.3	DRIVING	805
12.3.1	Movement	805
12.3.2	Pathfinding and Tactical AI	808
12.3.3	Driving-Like Games	808
12.4	REAL-TIME STRATEGY	809
12.4.1	Pathfinding	810
12.4.2	Group Movement	810
12.4.3	Tactical and Strategic AI	811
12.4.4	Decision Making	811
12.5	SPORTS	812
12.5.1	Physics Prediction	813
12.5.2	Playbooks and Content Creation	814
12.6	TURN-BASED STRATEGY GAMES	814
12.6.1	Timing	815
12.6.2	Helping the Player	816

CHAPTER

13**AI-BASED GAME GENRES**

817

13.1 TEACHING CHARACTERS

817

13.1.1 Representing Actions

818

13.1.2 Representing the World

818

13.1.3 Learning Mechanism

819

13.1.4 Predictable Mental Models and Pathological States

821

13.2 FLOCKING AND HERDING GAMES

823

13.2.1 Making the Creatures

823

13.2.2 Tuning Steering for Interactivity

823

13.2.3 Steering Behavior Stability

825

13.2.4 Ecosystem Design

825
