Foreword	xi
Preface	xiii
Contributors	xvii
Common Conversion Factors	xix
Introduction	xix
Converting Units of Volume	xix
Converting Temperatures	xix
A Note About Writing Units of Measure	xxi
Combining Techniques to Answer Molecular Questions	xxvii
Introduction	xxvii
Nucleic Acids	xxvii
Proteins	xxix
Whole Cells and Subcellular Structures	xxx
General	xxx

1 Volume/Weight Measurement

1.1	Volume Measurement	
	Overview	1.1.1
	Micropipettors	1.1.5
	Pipets	1.1.8
	Volumetric Containers	1.1.12
	Burets and Graduated Cylinders	1.1.13
	Cleaning Volumetric Apparatus	1.1.13
1.2	Weight Measurement	
	Overview and Principles	1.2.1
	Strategic Planning	1.2.3
	Safety Considerations	1.2.9
	Protocols	1.2.9
	Basic Protocol 1: Measuring Mass Using a Top-Loading Balance	1.2.10
	Basic Protocol 2: Measuring Mass Using an Analytical Balance	1.2.10
	Understanding Results	1.2.10
	Troubleshooting	1.2.10

2 Concentration Measurement

2.1	Spectrophotometry	
	Overview and Principles	2.1.1
	Components of a Spectrophotometer	2.1.3
	How a Spectrophotometer Works	2.1.7
	Strategic Planning	2.1.12
	Safety Considerations	2.1.16
	Protocols	2.1.16
	Basic Protocol 1: Preparation of a Standard Curve for Dipicolinic Acid (DPA)	2.1.16
	Basic Protocol 2: Determination of a Standard Curve for Dipicolinic Acid (DPA) and Measurement of DPA Concentration in Unknown Samples	2.1.18
	Support Protocol: Optimizing Spectrophotometer Settings	2.1.22
	Understanding Results	2.1.23
	Troubleshooting	2.1.23
	Variations	2.1.24
2.2	Quantitation of Nucleic Acids and Proteins	
	Overview and Principles	2.2.1
	Strategic Planning	2.2.7
	Protocols: Nucleic Acid Quantification	2.2.10
	Basic Protocol 1: Detection of Nucleic Acids Using Absorption Spectroscopy	2.2.10
	Alternate Protocol 1: DNA Detection Using the DNA-Binding Fluorochrome Hoechst 33258	2.2.13

	Alternate Protocol 2: DNA and RNA Detection with Ethidium Bromide Fluorescence	2.2.14
	Alternate Protocol 3: DNA Detection Using PicoGreen dsDNA Quantitation Reagent	2.2.14
	Protocols: Protein Quantification	2.2.18
	Basic Protocol 2: Lowry Protein Assay	2.2.18
	Alternate Protocol 4: Lowry Protein Assay, Reduced Volume	2.2.19
	Support Protocol: Deoxycholate-Trichloroacetic Acid (DOC-TCA) Sample Precipitation for Removal of Interfering Compounds and Sample Concentration	2.2.20
	Basic Protocol 3: BCA Protein Assay	2.2.20
	Basic Protocol 4: Coomassie Blue Protein Assay (Bradford Assay)	2.2.21
	Basic Protocol 5: UV Spectrophotometry	2.2.21
	Alternate Protocol 5: Protein Quantitation with UV Spectroscopy and Correction for Like-Acid Contamination	2.2.22
	Protocol Common to Nucleic Acids and Proteins	2.2.22
	Basic Protocol 6: Gel Based Quantitation of Protein and Nucleic Acids	2.2.22
	Reagents and Solutions	2.2.24
	Understanding Results	2.2.26
	Troubleshooting	2.2.27
	Variations	2.2.27
2.3	Radiation Safety and Measurement	
	Introduction	2.3.1
	Background Information	2.3.1
	Minimizing Exposure	2.3.5
	General Precautions	2.3.7
	Specific Precautions	2.3.8
	Measuring Radioactivity	2.3.15
	Responding to Spills	2.3.19
	Conclusion	2.3.20

3 Reagent Preparation

3.1	Reagent Preparation: Theoretical and Practical Discussions	
	Reagent Preparation	3.1.1
	Accuracy of Weighing and Pipetting	3.1.5
	Use of Calibrated pH Meters	3.1.5
	Avoiding Chemical and Microbial Contamination of Reagents	3.1.6
	Preparing Reagent or Buffer Solutions	3.1.6
	Making Buffer Solutions	3.1.10
3.2	Measurement of pH	
	Introduction	3.2.1
	Measuring pH	3.2.1
	pH Electrode Care	3.2.8
	Measurement of pH	3.2.10
3.3	Recipes for Commonly Encountered Reagents	
	Introduction	3.2.1
	Recipes	3.2.1

4 Cell Culture Techniques

4.1	Aseptic Technique	
	Overview and Principles	4.1.1
	Strategic Planning	4.1.2
	Safety Considerations	4.1.5
	Techniques for Maintaining Aseptic Conditions	4.1.6
	Troubleshooting	4.1.11
4.2	Culture of <i>Escherichia coli</i> and Related Bacteria	
	Overview and Principles	4.2.1
	Safety Considerations	4.2.2
	Commonly Used Tools	4.2.2

Reagents	4.2.3
Culturing Bacteria on Solid Media	4.2.3
Growing Bacteria in Liquid Culture	4.2.5
Analysis and Purification of Plasmid DNAs	4.2.10
Storage of Cultures	4.2.20
Commonly Used Bacterial Media	4.2.21

5 Sample Preparation

5.1 Centrifugation	
Introduction	5.1.1
Definitions	5.1.3
Rotors	5.1.5
5.2 Purification and Concentration of Nucleic Acids	
Overview and Principles	5.2.1
Strategic Planning	5.2.6
Safety Considerations	5.2.6
Protocols	5.2.6
Basic Protocol 1: Phenol Extraction and Ethanol Precipitation of DNA	5.2.6
Alternate Protocol 1: Purification of Plasmid DNA Using Silica Membrane Spin Columns	5.2.8
Support Protocol 1: Precipitation of DNA Using Isopropanol	5.2.10
Support Protocol 2: Concentration of DNA Using Butanol	5.2.10
Basic Protocol 2: Single-Step RNA Isolation from Cultured Cells or Tissues	5.2.11
Alternate Protocol 2: Purification and Concentration of RNA and Dilute Solutions of DNA	5.2.13
Reagents and Solutions	5.2.14
Understanding Results	5.2.15
Troubleshooting	5.2.17

6 Chromatography

6.1 Overview of Chromatography	
Overview	6.1.1
Theory of Chromatography	6.1.2
Common Types of Chromatography for Purification of Proteins and Underlying Principles	6.1.14
6.2 Column Chromatography	
Overview	6.2.1
Choice of Chromatography Column	6.2.3
Frits, Stopcocks, Tubing, and Other Accessories	6.2.4
Buffer Systems	6.2.6
Planning and Running the Column Chromatography Experiment	6.2.9
Detectors and Recorders	6.2.11
Fraction Collectors	6.2.12
Pooling Fractions	6.2.12
Prepacked Columns and Kits	6.2.13

7 Electrophoresis

7.1 Overview of Electrophoresis	
Introduction	7.1.1
General Principles	7.1.1
Visualization of Resolved Molecules	7.1.5
Imaging Resolved Molecules	7.1.5
7.2 Agarose Gel Electrophoresis	
Overview and Principles	7.2.1
Strategic Planning	7.2.2
Safety Considerations	7.2.4
Protocols	7.2.5
Basic Protocol 1: DNA Agarose Gel Electrophoresis	7.2.5
Basic Protocol 2: Denaturing RNA Agarose Gel Electrophoresis	7.2.11

	Reagents and Solutions	7.2.14
	Understanding Results	7.2.15
	Troubleshooting	7.2.17
	Variations	7.2.17
7.3	SDS-Polyacrylamide Gel Electrophoresis (SDS-PAGE)	
	Overview and Principles	7.3.1
	Strategic Planning	7.3.7
	Safety Considerations	7.3.9
	Protocols	7.3.9
	Basic Protocol: Denaturing (SDS) Discontinuous Gel Electrophoresis: The Laemmli Gel Method	7.3.9
	Support Protocol 1: Casting a Gel for Use in Denaturing Discontinuous Electrophoresis	7.3.13
	Support Protocol 2: Calculating Molecular Mass	7.3.16
	Support Protocol 3: Recrystallizing SDS	7.3.17
	Reagents and Solutions	7.3.18
	Understanding Results	7.3.19
	Troubleshooting	7.3.20
	Variations	7.3.24
7.4	Staining Proteins in Gels	
	Overview and Principles	7.4.1
	Strategic Planning	7.4.2
	Protocols	7.4.3
	Basic Protocol 1: Coomassie Blue Staining	7.4.3
	Alternate Protocol 1: Rapid Coomassie Blue Staining	7.4.4
	Basic Protocol 2: Nonammoniacal Silver Staining	7.4.4
	Alternate Protocol 2: Rapid Silver Staining	7.4.5
	Basic Protocol 3: Fluorescent Staining Using SYPRO Orange or Red	7.4.6
	Support Protocol: Photography of SYPRO Orange or Red Fluorescently Stained Gels	7.4.8
	Reagents and Solutions	7.4.8
	Understanding Results	7.4.10
	Troubleshooting	7.4.10
	Variations	7.4.11
7.5	Overview of Digital Electrophoresis Analysis	
	Introduction	7.5.1
	Reasons for Digital Documentation and Analysis	7.5.1
	Key Terms for Imaging	7.5.2
	Image Capture	7.5.6
	Advances in CCD Technology	7.5.11
	List of Typical Camera Features and Benefits	7.5.20
	Analysis	7.5.22
	Image Databases for Image Retrieval and Analysis	7.5.27

8 Blotting

8.1	Overview of Blotting	
	General Overview	8.1.1
	General Considerations	8.1.3
	Southern and Northern Blotting	8.1.4
	Immunoblotting	8.1.14
8.2	Nucleic Acid Blotting: Southern and Northern	
	Overview and Principles	8.2.1
	Strategic Planning	8.2.4
	Safety Considerations	8.2.6
	Protocols	8.2.7
	Basic Protocol 1: Southern Blotting	8.2.7
	Basic Protocol 2: Northern Blotting	8.2.11
	Support Protocol: Assembling a Blotting Transfer Apparatus	8.2.15
	Alternate Protocol: Acrylamide Gel Vacuum Blotting	8.2.16

	Reagents and Solutions	8.2.18
	Understanding Results	8.2.19
	Troubleshooting	8.2.20
	Variations	8.2.23
8.3	Protein Blotting: Immunoblotting	
	Overview and Principles	8.3.1
	Strategic Planning	8.3.6
	Protocols	8.3.8
	Basic Protocol 1: Protein Blotting with Semidry Systems	8.3.8
	Basic Protocol 2: Tank Transfer	8.3.12
	Alternate Protocol 1: Slot and Dot Blotting	8.3.14
	Support Protocol 1: Ponceau S Staining of Transferred Proteins	8.3.15
	Support Protocol 2: India Ink Staining of Transferred Proteins	8.3.15
	Support Protocol 3: Gold Staining of Transferred Proteins	8.3.16
	Support Protocol 4: Alkali Enhancement of Protein Staining	8.3.16
	Support Protocol 5: Fluorescent Protein Blot Staining of Transferred Proteins	8.3.17
	Support Protocol 6: Viewing and Photographing SYPRO Ruby-Stained Protein Blots	8.3.18
	Basic Protocol 3: Immunoprobng with Directly Conjugated Secondary Antibody	8.3.19
	Alternate Protocol 2: Immunoprobng with Avidin-Biotin Coupling to Secondary Antibody	8.3.21
	Basic Protocol 4: Visualization with Chromogenic Substrates	8.3.22
	Alternate Protocol 3: Visualization with Luminescent Substrates	8.3.23
	Reagents and Solutions	8.3.24
	Understanding Results	8.3.25
	Troubleshooting	8.3.25
	Variations	8.3.27
8.4	Labeling DNA and Preparing Probes	
	Introduction	8.4.1
	Strategic Planning	8.4.12
	Safety Considerations	8.4.13
	Protocols	8.4.13
	Basic Protocol 1: 5' End-Labeling of DNA with T4 Polynucleotide Kinase	8.4.13
	Basic Protocol 2: Labeling DNA by Nick Translation	8.4.15
	Basic Protocol 3: Labeling DNA by Random Primed Synthesis	8.4.17
	Support Protocol: Purification of Labeled Probes Using Gel-Filtration Spin Columns	8.4.18
	Reagents and Solutions	8.4.19
	Understanding Results	8.4.19
	Troubleshooting	8.4.20
	Variations	8.4.20

9 Microscopy

9.1	Conventional Light Microscopy	
	Parts of the Light Microscope	9.1.1
	Care and Maintenance	9.1.2
	Basic Principles and Definitions	9.1.4
	Magnification Versus Resolution	9.1.7
	Getting Comfortable	9.1.9
	Finding the Object to be Viewed	9.1.10
	Marking the Location of an Object: Secrets of the Microscope Stage	9.1.11
	A Quick Guide to Choosing from Various Optical Techniques	9.1.12
	Köhler Illumination: Secrets of the Substage Condenser	9.1.12
	Oil Immersion	9.1.15
	Dark-Field, Rheinberg, Polarized-Light, Phase-Contrast, and DIC Microscopy	9.1.17
9.2	Immunofluorescence Microscopy	
	Overview and Principles	9.2.1
	Strategic Planning	9.2.6
	Safety Considerations	9.2.9

Protocols	9.2.10
Basic Protocol 1: Processing Fibroblasts	9.2.10
Basic Protocol 2: Processing <i>Tetrahymena</i> Cells	9.2.13
Alternate Protocol: Staining Cells Adhered to Poly-L-Lysine-Coated Coverslips	9.2.14
Basic Protocol 3: Visualizing the Cells	9.2.15
Reagents and Solutions	9.2.18
Understanding Results	9.2.19
Troubleshooting	9.2.20

10 Enzymatic Reactions

10.1	Working with Enzymes	
	Introduction	10.1.1
	Overview of Enzymes	10.1.1
	Handling Enzymes in the Laboratory	10.1.5
	Example of Setting Up an Enzymatic Reaction: Restriction Enzymes	10.1.15
10.2	Overview of PCR	
	Overview and Principles	10.2.1
	Strategic Planning	10.2.13
	Safety Considerations	10.2.17
	Protocols	10.2.18
	Basic Protocol: Routine PCR	10.2.18
	Support Protocol 1: Using Temperature Gradients for Rapid Optimization of PCR Cycling Conditions	10.2.29
	Support Protocol 2: Titration of MgCl ₂ Concentration	10.2.23
	Reagents and Solutions	10.2.24
	Understanding Results	10.2.25
	Troubleshooting	10.2.25
	Variations	10.2.29
10.3	Real-Time PCR	
	Overview and Principles	10.3.1
	Strategic Planning	10.3.5
	Safety Considerations	10.3.22
	Protocols	10.3.22
	Basic Protocol 1: Synthesis of cDNA by Reverse Transcription	10.3.23
	Basic Protocol 2: Real-Time PCR Amplification and Analysis	10.3.24
	Support Protocol 1: Determination of Amplification Efficiency	10.3.26
	Support Protocol 2: Analyzing Results Using the Pfaffl Method to Calculate Fold Induction	10.3.28
	Support Protocol 3: Serial Dilution for Standard Curve	10.3.29
	Understanding Results	10.3.30
	Troubleshooting	10.3.30
	Variations	10.3.32
10.4	DNA Sequencing: An Outsourcing Guide	
	Overview and Principles	10.4.1
	Strategic Planning	10.4.7
	Safety Considerations	10.4.9
	Protocols	10.4.9
	Basic Protocol 1: Isolating Plasmid DNA by Alkaline Lysis Miniprep for Use as Sequencing Template	10.4.9
	Basic Protocol 2: Treating PCR Products with Exonuclease I and Shrimp Alkaline Phosphatase to Purify Sequencing Template	10.4.11
	Alternate Protocol: PEG Purification of PCR Products for DNA Sequencing	10.4.12
	Reagents and Solutions	10.4.13
	Understanding Results	10.4.14
	Troubleshooting	10.4.15
	Variations	10.4.17

Appendices

A.1	Laboratory Safety	
	Hazardous Chemicals	A.1.1
	Biohazards and Infectious Biological Agents	A.1.9
A.2	Laboratory Notebooks and Data Storage	
	Hard Copy, Paper Notebooks	A.2.1
	Electronic Notebooks (ELNS)	A.2.14
	Patents and Intellectual Property	A.2.16
	Comments	A.2.17
A.3A	Ethical Considerations When Altering Digital Images	
	Introduction	A.3A.1
	Golden Rules	A.3A.1
	Guidelines from Specific Journals	A.3A.3
A.3B	Practical Considerations When Altering Digital Images	
	Introduction	A.3B.1
	Sampling Resolution	A.3B.1
	Resampling	A.3B.3
	Acquiring Images	A.3B.6
	Photoshop and Scientific Image Analysis Programs	A.3B.9
	Optimizing the Display	A.3B.11
	Using Images from Vector Programs and Powerpoint	A.3B.12
	Altering Images Using Photoshop	A.3B.13
	Inserting Files into Powerpoint	A.3B.30
A.4	Statistical Analysis	
	Introduction	A.4.1
	Inference	A.4.3
	The One Sample Location Problem	A.4.7
	The Two Independent Samples Location Problem	A.4.11
	The One Sample Proportion Problem	A.4.17
	The Two Independent Samples Proportion Problem	A.4.19
	ANOVA	A.4.20
	Regression	A.4.23
	Correlation	A.4.26
	Chi Square (χ^2)	A.4.27
A.5A	Preparing and Presenting a Poster	
	Introduction	A.5A.1
	Content	A.5A.1
	Mechanics	A.5A.6
	Visual Style	A.5A.8
	A Checklist	A.5A.14
A.5B	Preparing and Presenting a Talk	
	Introduction	A.5B.1
	Preparation	A.5B.1
	Visual Aids	A.5B.4
	Delivery	A.5B.6
	Answering Questions	A.5B.7
	Poster Presentations	A.5B.8
	Conclusion	A.5B.8
