

ROBOTICS

Appin Knowledge Solutions

ENGINEERING SERIES

Table of Contents

About the Authors	v
1. Introduction.....	1
1.1 Introduction to Robotics.....	1
1.2 History of Robotics.....	2
1.3 Current Research in Robotics Around the World	10
1.4 Classification of Robotics	16
1.4.1 Robotic Arms	16
1.4.2 Wheeled Mobile Robots.....	16
1.4.3 Legged Robots	17
1.4.4 Underwater Robots	18
1.4.5 Flying Robots	19
1.4.6 Robot Vision.....	19
1.4.7 Artificial Intelligence	20
1.4.8 Industrial Automation.....	22
1.5 An Overview of the Book.....	23
2. Basic Mechanics	25
2.1 Introduction to Theory of Machines and Mechanisms	25
2.2 Some Popular Mechanisms.....	26
2.2.1 Four-bar Mechanism	26
2.2.2 Slider-crank Mechanism	28
2.2.3 Rack and Pinion	30
2.2.4 Cams and Cranks	32
2.3 Gear and Gear Trains	32
2.3.1 Spur Gears.....	33
2.3.2 Helical Gears.....	34
2.3.3 Bevel Gears	35

2.3.4	Worm and Wheel	36
2.3.5	Parallel Axis Gear Trains	37
2.4	Synthesis of Mechanisms	39
2.4.1	Type, Number, and Dimensional Synthesis.....	39
2.4.2	Function Generation, Path Generation, and Motion Generation	40
2.4.3	Two-position Synthesis	41
2.4.4	Three-position Synthesis	44
2.5	Kinematic Analysis of Mechanisms	48
2.5.1	Graphical Position Analysis Method	48
2.5.2	Algebraic Position Analysis of Linkages.....	50
2.5.3	Complex Algebra Method for Position Analysis.....	52
2.6	A Practical Guide to Use Various Mechanisms.....	54
2.6.1	Most Commonly Used Mechanisms in Projects.....	54
2.6.2	Use of Different Kinds of Gears and Their Advantages	61
2.6.3	Measuring the Torque of a Motor	62
3.	Basic Electronics	65
3.1	Introduction to Electronics.....	65
3.2	Some Basic Elements	66
3.2.1	Resistors	67
3.2.2	Capacitors.....	69
3.2.3	Breadboard.....	70
3.2.4	Potentiometer	72
3.2.5	Diodes	73
3.2.6	LEDs	81
3.2.7	Transistors	82
3.2.8	Integrated Circuits.....	85
3.2.9	Some Lab Components	86
3.3	Steps to Design and Create a Project.....	89
3.4	Sensor Design	90
3.5	Using the Parallel Port of the Computer	102
3.6	Serial Communication: RS-232	117
3.7	Using the Microcontroller	124
3.8	Actuators	126
3.8.1	DC Motors	131
3.8.2	Controlling a DC Motor	133

3.8.3	Pulse Width Modulation.....	140
3.8.4	Stepper Motors	141
3.8.5	Servo Motor	152
4.	Wheeled Mobile Robots	155
4.1	Introduction.....	155
4.2	Classification of Wheeled Mobile Robots (WMRs).....	156
4.2.1	Differentially Driven WMRs.....	156
4.2.2	Car-type WMRs	157
4.2.3	Omnidirectional WMRs	158
4.2.4	Synchro Drive WMRs.....	159
4.3	Kinematics and Mathematical Modeling of WMRs	161
4.3.1	What is Mathematical Modeling?	161
4.3.2	Kinematic Constraints	163
4.3.3	Holonomic Constraints.....	165
4.3.4	Nonholonomic Constraints.....	165
4.3.5	Equivalent Robot Models.....	167
4.3.6	Unicycle Kinematic Model	169
4.3.7	Global Coordinate Kinematic Model of the Unicycle.....	171
4.3.8	Global Coordinate Kinematic Model of a Car-type WMR	172
4.3.9	Path Coordinate Model	173
4.4	Control of WMRs.....	175
4.4.1	What is Control?	175
4.4.2	Trajectory Following.....	176
4.4.3	The Control Strategy	179
4.4.4	Feedback Control	179
4.5	Simulation of WMRs Using Matlab	181
4.5.1	Testing the Control Strategy for a Unicycle-type Mobile Robot	182
4.5.2	Testing the Control Strategy for a Car-type Mobile Robot.....	186
4.5.3	Testing the Control Strategy Trajectory Following	190
	Problem in a Car-type Mobile Robot	
4.6	The Identification and Elimination of the Problem	191
4.7	Modifying the Model to Make the Variation in Delta Continuous.....	192
4.8	Developing the Software and Hardware Model of an All-purpose Research WMR.....	194
	Interfacing the System with a Parallel Port	194

5.	Kinematics of Robotic Manipulators.....	213
5.1	Introduction to Robotic Manipulators	213
5.2	Position and Orientation of Objects in Space	214
5.2.1	Object Coordinate Frame: Position, Orientation, and Frames	214
5.2.2	Mapping between Translated Frames	215
5.2.3	Mapping between Rotated Frames.....	215
5.2.4	Mapping between Rotated and Translated Frames	218
5.2.5	Homogeneous Representation.....	219
5.3	Forward Kinematics.....	220
5.3.1	Notations and Description of Links and Joints.....	220
5.3.2	Denavit-Hartenberg Notation.....	222
5.3.3	First and Last Links in the Chain	224
5.3.4	Summary: D.H. Parameters	225
5.3.5	Kinematic Modeling Using D-H Notations.....	226
5.3.6	Special Cases.....	226
5.3.7	Forward Kinematics of a Manipulator	228
5.3.8	Examples of Forward Kinematics	230
5.4	Inverse Kinematics.....	233
5.4.1	Workspace	233
5.4.2	Solvability	234
5.4.3	Closed form Solutions.....	235
5.4.4	Algebraic vs. Geometric Solution.....	236
5.4.5	Solution by a Systematic Approach.....	239
6.	Classification of Sensors.....	241
6.1	Classification of Sensors.....	241
6.2	Encoders and Dead Reckoning.....	244
6.3	Infrared Sensors	249
6.4	Ground-based RF Systems	250
6.4.1	LORAN	250
6.4.2	Kaman Sciences Radio Frequency Navigation Grid	251
6.4.3	Precision Location Tracking and Telemetry System	252
6.4.4	Motorola Mini-ranger Falcon	253
6.4.5	Harris Infogeometric System	254
6.5	Active Beacons	256
6.5.1	Trilateration	256
6.5.2	Triangulation	257

6.5.3	Discussion on Triangulation Methods	258
6.5.4	Triangulation with More than Three Landmarks	259
6.6	Ultrasonic Transponder Trilateration	261
6.6.1	IS Robotics 2D Location System	261
6.6.2	Tulane University 3D Location System	262
6.7	Accelerometers	267
6.8	Gyroscopes	267
6.8.1	Space-stable Gyroscopes	268
6.8.2	Gyrocompasses	270
6.8.3	Gyros	270
6.9	Laser Range Finder	274
6.10	Vision-based Sensors	276
6.11	Color-tracking Sensors	281
6.12	Sensor Mounting Arrangement	287
6.13	Design of the Circuitry	288
6.14	Reading the Pulses in a Computer	289
7.	Legged Robots	291
7.1	Why Study Legged Robots?.....	291
7.2	Balance of Legged Robots	293
7.2.1	Static Balance Methods	293
7.2.2	Dynamic Balance Methods	294
7.3	Analysis of Gaits in Legged Animals	297
7.4	Kinematics of Leg Design.....	304
7.4.1	Forward Kinematics	304
7.4.2	Inverse Kinematics	305
7.5	Dynamic Balance and Inverse Pendulum Model	306
	Appendix A Turtle.cpp.....	311
	Appendix B About the CD-Rom.....	339
	Index	341
