

Pharmaceutical Biotechnology

PUROHIT / KAKRANI / SALUJA

CONTENTS

1 PHARMACEUTICAL BIOTECHNOLOGY: AN INTRODUCTION 1

| | |
|--|----|
| Origin and Definition: Old Vs New | |
| Biotechnology..... | 1 |
| Definitions..... | 1 |
| Historical Background..... | 3 |
| Scope and Importance of | |
| Biotechnology..... | 7 |
| Genetic Engineering..... | 11 |
| Tissue Culture..... | 12 |
| Protoplast Culture and | |
| Micropropagations..... | 14 |
| Biosensors, Biochips, Biofilms and | |
| Biosurfactents..... | 14 |
| The Biotechnologies and their | |
| applications..... | 15 |
| <i>Monoclonal Antibody</i> | |
| Technologies..... | 15 |
| <i>Cell Culture Technology</i> | 15 |
| <i>Cloning Technology</i> | 16 |
| <i>Genetic Modification Technology</i> | 17 |
| <i>Protein Engineering Technology</i> | 17 |
| <i>Hybrid Technologies</i> | 18 |
| <i>Biosensor Technology</i> | 18 |
| <i>Tissue Engineering Technology</i> | 18 |
| <i>DNA Chip Technology</i> | 19 |
| <i>Bioinformatics Technology</i> | 19 |
| Research Promotion and Priorities | |
| in India..... | 20 |
| <i>Bioinformatics</i> | 21 |
| <i>Plant Molecular Biological</i> | |
| Researches..... | 21 |
| <i>Service Oriented Infrastructural</i> | |
| Facilities..... | 21 |

| | |
|------------------------------------|----|
| Biotechnology Industry Statistics: | |
| Some Facts..... | 21 |

2 BIOLOGICAL GENETICS AND VARIATIONS IN CHARACTERS OF MICROBES23

| | |
|---|----|
| Importance of Microbial Genetics..... | 23 |
| <i>Important Terms Used in</i> | |
| <i>Microbial Genetics</i> | 23 |
| DNA as Genetic Material..... | 24 |
| DNA Replication..... | 28 |
| <i>How replication is achieved?</i> | 28 |
| <i>How Bacteria Replicate Their</i> | |
| DNA..... | 31 |
| Ribonucleic Acid (RNA)..... | 32 |
| Gene..... | 33 |
| <i>Prokaryotic Genes</i> | 36 |
| <i>Structure of Cyanobacterial</i> | |
| Genes..... | 36 |
| <i>Gene Arrangement in the</i> | |
| <i>Cauliflower Mosaic Virus</i> | 36 |
| <i>Eukaryotic Genes</i> | 36 |
| <i>Organelle Genes</i> | 37 |
| <i>Gene That Code for Proteins</i> | 37 |
| <i>Gene That Code for tRNA and</i> | |
| tRNA..... | 38 |
| <i>Eukaryotic Gene Organization</i> | |
| and Expression..... | 38 |
| <i>Prokaryotic Gene Organization</i> | |
| and Expression..... | 39 |
| Genetic Code..... | 41 |
| <i>Concepts of Degeneracy</i> | 42 |
| <i>DNA Encodes Genetic</i> | |
| Information..... | 43 |
| Molecular Cloning of DNA..... | 46 |
| <i>Restriction Enzymes</i> | 46 |

| | |
|---|----|
| <i>DNA Fingerprinting</i> | 47 |
| <i>Plasmids</i> | 47 |
| Cell Properties Determined by Plasmid Genes | 51 |
| Genome | 53 |
| <i>Genomes of Microorganisms</i> | 53 |
| <i>Genomes of Eukaryotic Microorganisms</i> | 54 |
| <i>Genomes of Prokaryotic Microorganisms</i> | 55 |
| <i>Importance of Genome in Research</i> | 56 |
| Mapping Genomes by Genetic Techniques..... | 57 |
| <i>Genetic and Physical Maps</i> | 58 |
| <i>Markers for Genetic Maps</i> | 58 |
| <i>Simple sequence length polymorphisms (SSLPs)</i> | 59 |
| <i>Southern hybridization</i> | 60 |
| <i>DNA chip and Its Technology</i> | 60 |

3 CONCEPTS, PERSPECTIVES AND TECHNIQUES OF MICROBIAL GENETIC AND PROTEIN ENGINEERING..... 63

| | |
|---|----|
| Advantages of Genetic Engineering..... | 64 |
| <i>Practical Applications</i> | 64 |
| Important Terms of Genetic Engineering..... | 66 |
| Prerequisites in Plant Genetic Engineering Methods..... | 68 |
| Perspectives of Genetic Engineering..... | 68 |
| <i>Other Applications of Genetic Engineering</i> | 70 |
| Protein Engineering: Trends and Basic Concepts..... | 71 |
| <i>Enzyme Characteristics as Target for Protein Engineering</i> | 71 |
| <i>Single Cell Protein (SCP) Production</i> | 72 |
| <i>Protein Engineering: Achievements</i> | 72 |
| Techniques of Genetic Engineering | 72 |

| | |
|--|----|
| <i>Cleaving DNA With Restriction Enzymes</i> | 72 |
| <i>Gel Electrophoresis</i> | 74 |
| Blotting Techniques | 74 |
| <i>Analysis of DNA by Southern Blotting</i> | 74 |
| <i>Analysis of RNAs by Northern Blot Hybridizations</i> | 75 |
| <i>Analysis of Proteins by Western Blot Techniques</i> | 76 |
| Detection of RFLPs..... | 77 |
| DNA Sequencing | 78 |
| <i>Methods for Analyzing DNA Sequence</i> | 79 |
| <i>Sequencing by Chemical Degradation</i> | 79 |
| <i>Sequencing by Chain Termination</i> | 79 |
| <i>Direct DNA sequencing using PCR (also called ligation mediated PCR = LMPCR)</i> | 81 |
| <i>Automated DNA Sequence Analysis</i> | 82 |
| Chemical Synthesis of DNA | 84 |
| <i>Chemical synthesis of tRNA Genes</i> | 84 |
| Insertion DNA Sequencing | 84 |
| <i>Synthesis of Gene for Yeast Alanine tRNA</i> | 84 |
| <i>Synthesis of Gene for a True Precursor tRNA</i> | 84 |
| <i>Total Synthesis of a Human Leukocyte Interferon Gene</i> | 84 |
| Gene Synthesis Machines..... | 85 |
| Other Techniques of Genetic Engineering..... | 85 |
| <i>Transposable Elements in Prokaryotes</i> | 86 |
| Agroinfection | 90 |
| <i>Biolistic Plant Transformation</i> | 91 |
| <i>Microinjection-Mediated Gene Delivery</i> | 94 |
| <i>Micro laser</i> | 94 |
| <i>Electroporation</i> | 94 |

4 TECHNIQUES OF RECOMBINANT DNA TECHNOLOGY FOR PRODUCTION OF BIOLOGICALS 95

| | |
|--|-----|
| Recombinant protein production | 97 |
| <i>Bio-activity of Expressed Protein</i> | 97 |
| <i>Synthesis and Secretion of Recombinant Proteins</i> | 98 |
| <i>Xenotransplantation</i> | 98 |
| Production of Biologicals..... | 99 |
| <i>Production of Human Insulin</i> | 99 |
| <i>Production of Human Growth Hormone</i> | 100 |
| <i>Production of Growth Hormone Releasing Factor (GRF)</i> | 100 |
| <i>Production of Erythropoietins (EPO)</i> | 101 |
| <i>Interferons (IFN)</i> | 101 |
| <i>Interferon or Antiviral Substances</i> | 101 |
| <i>Tumour Necrosis Factor (TNF) and Lymphotoxin (LT)</i> | 103 |
| <i>Interleukines (IL)</i> | 103 |
| <i>Other Products</i> | 103 |
| Vaccines | 103 |
| <i>Sub-unit Vaccines</i> | 104 |
| <i>Killed Vaccines</i> | 104 |
| <i>Live Vaccine</i> | 105 |
| Processes for Recovery and Purification of Biologicals | 106 |

5 ANIMAL CELL AND TISSUE CULTURE 107

| | |
|--|-----|
| Advantages and Disadvantages of Tissue Culture Methods | 107 |
| Primary and Established Cell Lines | 107 |
| Kinetics of Cell Growth | 109 |
| <i>Established Cell Lines</i> | 109 |
| <i>Primary Cell Lines</i> | 109 |
| <i>Interaction Among Cells</i> | 109 |
| Genetics of Cultured Cells | 109 |
| <i>Metabolism</i> | 110 |
| Animal Cell and Tissue Culture | 110 |

| | |
|--|-----|
| <i>Mechanical Technique</i> | 110 |
| <i>Biochemical Technique</i> | 110 |
| Animal Tissue Culture Media | 111 |
| <i>Culture Media Containing Naturally Occurring Ingredients</i> | 111 |
| <i>Complex Natural Media</i> | 113 |
| Laboratory Facilities for Tissue Culture | 118 |
| The Substrate on Which Cells Grow in Laboratory | 119 |
| <i>Treatment of Substrate Surfaces</i> | 119 |
| <i>Feeder Layers on Substrate</i> | 120 |
| <i>The Gas Phase for Tissue Culture</i> | 120 |
| Culture Procedures | 120 |
| <i>Preparation and Sterilization of Glassware and Apparatus</i> | 120 |
| <i>Preparation and Sterilization of Reagents and Media</i> | 120 |
| <i>Preparation of Animal Material</i> | 122 |
| Primary Culture, Cell Lines and Cloning | 122 |
| <i>Disaggregation of Tissue and Primary Culture</i> | 122 |
| <i>Isolation of Tissue</i> | 122 |
| <i>Enzymatic Disaggregation</i> | 123 |
| <i>Disaggregation by trypsin (for embryonic tissue) or Trypsinization</i> | 123 |
| <i>Disaggregation by Collagenase (for embryonic, normal and malignant tissues)</i> | 125 |
| <i>Mechanical Disaggregation</i> | 125 |
| <i>Separation of Viable and Nonviable Cells</i> | 125 |
| Somatic Cell Fusion | 125 |
| Tissue Cultures..... | 126 |
| <i>Primary Explantation Techniques</i> | 126 |
| <i>Slide or Coverslip Cultures</i> | 126 |
| <i>Flask Cultures</i> | 128 |
| <i>Test Tube Cultures</i> | 129 |
| Organ Culture..... | 129 |
| <i>Culture of Embryonic Organs</i> | 129 |
| <i>Organ Cultures on Plasma Clots</i> | 129 |
| <i>Organ Cultures on Agar</i> | 130 |

| | |
|---|-----|
| Whole Embryo Culture | 130 |
| <i>Culture of Chick Embryo (Spratt, 1956)</i> | 130 |
| Animal Tissue Cultures in | |
| Biomedical Research—Genetics | 131 |
| Karyological Studies | 131 |
| Identification and Study of Hereditary Metabolic Disorders | 131 |
| Somatic Cell Genetics | 131 |
| Tissue Cultures in Biomedical Research—Virology and Host-parasite Relationships | 131 |
| Tissue Cultures in Biomedical Research—Cancer | 132 |

6 HYBRIDOMAS TECHNOLOGY AND MONOCLONAL ANTIBODIES 133

| | |
|---|-----|
| Hybridoma | 133 |
| Monoclonal B-cells | 133 |
| Types of MABs | 134 |
| Chimeric MABs | 136 |
| Somatic Cell Fusion | 136 |
| Hybridoma Technology | 136 |
| Production of Monoclonal Antibodies | 137 |
| Step I: Fusion and Culture of Hybridomas | 138 |
| Step II: Cloning and Preservation of Hybridomas | 139 |
| Step III: Production of Antibody | 139 |
| Application of Monoclonal Antibodies | 139 |

7 GENE THERAPY 141

| | |
|------------------------------|-----|
| Gene-transfer system | 141 |
| Viral vector | 142 |
| Non-viral | 142 |
| Physical | 142 |
| Viral vectors | 143 |
| Adenovirus | 143 |
| Retrovirus | 145 |
| Adeno-associated Virus | 146 |

| | |
|---|-----|
| Non-viral approach | 146 |
| Naked DNA | 146 |
| Chemical Methods | 147 |
| Physical methods | 148 |
| Needle-free injection | 148 |
| Electroporation | 148 |
| Protection and intracellular release of DNA | 148 |
| Recent development and future prospects | 149 |

8 MICROBES IN PHARMACEUTICAL INDUSTRY 151

| | |
|--|-----|
| Single Cell Protein | 151 |
| Microorganisms and their Fermentation Substrates | 151 |
| Environmental Conditions for Growth | 152 |
| Choice of Fermentable Materials | 152 |
| SCP Products | 153 |
| Harmful Effects of SCP Use | 154 |
| Alcoholic Fermentation | 154 |
| Microbes in Organic Acid Production | 156 |
| Microbes in Enzyme Production | 156 |
| Microbes in Medicine | 156 |
| Antibiotics | 156 |
| Ergotin | 157 |
| Vitamins | 157 |
| Glycerin | 157 |
| Microbes as Tools for Biological Research | 158 |
| Genetical, Cytological and Biochemical Studies | 158 |

9 DEVELOPMENT OF INDUSTRIAL MICROORGANISMS 159

| | |
|--|-----|
| Mutation | 159 |
| Mutant Detection | 160 |
| Mutant Selection | 160 |
| The selection of mutants producing high yield of primary metabolites | 160 |

| | |
|--|-----|
| The Selection of Secondary Metabolite Producing Mutants..... | 162 |
|--|-----|

10 CULTURING OF INDUSTRIAL MICROORGANISMS 164

| | |
|---|-----|
| Inoculum Development..... | 164 |
| Batch Culture..... | 165 |
| Continuous Culture..... | 166 |
| The kinetics of Continuous Culture..... | 166 |
| Fed Batch Culture..... | 168 |
| Culture media..... | 169 |
| Precursors and Inducers..... | 169 |
| Repressors..... | 170 |

11 INDUSTRIAL FERMENTERS 171

| | |
|--|-----|
| <i>Continuous Culture</i> | 171 |
| The components of a fermentor..... | 171 |
| Parts of fermentors..... | 172 |
| <i>Vessel</i> | 172 |
| Peripheral parts and accessories..... | 172 |
| <i>Reagent pumps</i> | 172 |
| <i>Medium feed pumps and reservoir bottles</i> | 173 |
| <i>Rotameter/gas supply</i> | 174 |
| <i>Sampling device</i> | 174 |
| Alternative vessel designs..... | 174 |
| <i>Air lift</i> | 174 |
| <i>Fluidized bed</i> | 174 |
| <i>Hollow fibre</i> | 175 |
| <i>In situ sterilizable fermentors</i> | 175 |
| <i>Containment</i> | 175 |
| Additional accessories and peripherals..... | 175 |
| <i>Feed pumps</i> | 175 |
| <i>Exit gas analysis</i> | 176 |
| Types of reactors..... | 177 |
| Mechanically agitated stirred tank reactors..... | 177 |
| <i>Air-lift Bioreactor and Modified Air Lift Bioreactors</i> | 177 |
| <i>Novel Seesaw Bioreactor</i> | 179 |
| Different types of fermentor instrumentation..... | 180 |

| | |
|--|-----|
| <i>Analogue controllers – rack system</i> | 181 |
| <i>Analogue controllers – separate modules in housings</i> | 181 |
| <i>Digital controllers – embedded microprocessor</i> | 181 |
| <i>Digital controllers – process controllers</i> | 181 |
| <i>Digital controllers – direct computer control</i> | 181 |
| Common measurement and control systems..... | 181 |
| <i>Speed control</i> | 181 |
| <i>Temperature control</i> | 182 |
| <i>Control of gas supply</i> | 184 |
| <i>Control of pH</i> | 184 |
| <i>Control of dissolved oxygen</i> | 185 |
| <i>Antifoam control</i> | 186 |
| Simple continuous culture..... | 188 |
| Fermentor preparation and use..... | 189 |
| Scaling-up of Fermentation..... | 189 |
| <i>Disassembly of the vessel</i> | 189 |
| <i>Cleaning</i> | 189 |
| <i>Preparations for autoclaving</i> | 189 |
| <i>Autoclaving</i> | 190 |
| <i>Set-up following autoclaving</i> | 190 |
| <i>Sampling from a fermentor vessel</i> | 191 |
| <i>Inoculation of a fermentor vessel</i> | 191 |
| Maintenance of Aseptic Conditions..... | 192 |
| Transfer of Oxygen..... | 194 |

12 PRODUCTION OF ANTIBIOTICS 196

| | |
|---|-----|
| Screening of Antibiotic Producers..... | 197 |
| β -Lactam Antibiotics..... | 197 |
| <i>Penicillins</i> | 198 |
| <i>Cephalosporins</i> | 205 |
| Aminoglycoside Antibiotic..... | 205 |
| <i>Streptomycin</i> | 206 |
| Tetracyclines..... | 207 |
| <i>Production of Tetracycline</i> | 207 |
| Chloramphenicol..... | 209 |
| <i>Chloramphenicol Production</i> | 209 |
| Griseofulvin..... | 209 |
| <i>Inoculum</i> | 210 |

| | |
|----------------------------------|-----|
| Medium..... | 210 |
| Production..... | 210 |
| Extraction and Purification..... | 210 |
| Macrolide Antibiotics..... | 211 |
| Erythromycin..... | 211 |
| Rifamycins..... | 212 |
| Inoculum..... | 212 |
| Medium..... | 212 |
| Fermentation..... | 212 |
| Recovery and Purification..... | 212 |

13 PRODUCTION OF VITAMINS..... 213

| | |
|--|-----|
| Vitamins: General Aspects..... | 213 |
| Vitamin B Complex..... | 214 |
| Vitamin B ₁₂ (Cobamide) | |
| Production..... | 214 |
| Vitamin B ₂ (Riboflavin) Production.... | 216 |
| Production by Fermentation of | |
| Ashbya gossypii (NRRL Y | |
| 1056)..... | 217 |
| Vitamin C (Ascorbic Acid)..... | 218 |

14 PRODUCTION OF ERGOT ALKALOIDS 221

| | |
|------------------------------|-----|
| Producing Organisms..... | 222 |
| Genetic Considerations..... | 223 |
| Physiology of Alkaloid | |
| Formation..... | 223 |
| Ergot Alkaloid Enzymes and | |
| other factors..... | 224 |
| Commercial Production in | |
| Bioreactors..... | 225 |
| Medium..... | 226 |
| Preparation of Inoculum..... | 226 |
| Production of Alkaloid..... | 227 |
| Peptide Alkaloids..... | 227 |
| Isolation Separation and | |
| Purification..... | 228 |
| Peptide Alkaloids..... | 228 |
| Paspalic Acid..... | 229 |

15 OTHER PRIMARY METABOLITES OF PHARMACEUTICAL USES.....230

| | |
|------------------------------|-----|
| Fermentation Technology..... | 230 |
| Industrial Alcohol..... | 231 |
| Production of Alcoholic | |
| Beverages..... | 234 |
| Amino Acids..... | 237 |
| Glutamic Acid..... | 240 |
| L-Lysine..... | 240 |
| Citric Acid..... | 241 |
| Lactic Acid..... | 243 |
| Clinical Dextran..... | 244 |

16 BIOTRANSFORMATION AND STEROID PRODUCTION245

| | |
|---------------------------------------|-----|
| BioTransformation..... | 246 |
| Methods Used in | |
| Biotransformation Process..... | 246 |
| Steroid Bioconversion | |
| Fermentation..... | 247 |
| Analysis and Isolation of Product.... | 248 |
| Selection of Organisms..... | 248 |
| Biotransformation Process with | |
| Special Reference to Steroids..... | 249 |
| Hydroxylation..... | 249 |
| Dehydrogenation..... | 251 |
| Hydrogenation..... | 252 |
| Epoxidation..... | 252 |
| Aromatization of Ring A..... | 252 |
| Synthetic Routes..... | 253 |

17 BIOLOGY OF ENZYMES...255

| | |
|-------------------------------------|-----|
| Enzymes: the Tailor's Scissors..... | 255 |
| Properties of Enzymes..... | 258 |
| Enzymes: Nomenclature..... | 259 |
| Enzyme Classification..... | 259 |
| Enzymes as Chemo-thermo | |
| Regulators..... | 260 |
| What Enzymes Do?..... | 260 |
| What is Enzyme Kinetics?..... | 261 |
| How Enzymes Work..... | 262 |

| | |
|--|-----|
| Enzyme Activity..... | 263 |
| <i>Multi-substrate Enzymes</i> | 267 |
| Enzyme Optima..... | 267 |
| Enzyme Inhibitors, Activators and Inactivators of Enzymes..... | 268 |
| <i>Reversible and Irreversible Inhibition</i> | 270 |
| Enzyme Secretion by Plant Cells | 270 |
| <i>The Mechanism of Protein Secretion</i> | 270 |
| <i>The Control of Secretion</i> | 270 |
| Sources of Enzymes | 271 |
| Microbial Enzymes | 272 |
| Mechanism of Enzyme | |
| Biosynthesis in Microbial Cells | 273 |
| <i>Induction</i> | 273 |
| <i>Repression</i> | 273 |
| <i>Catabolic repression</i> | 273 |
| <i>Transcription control during the growth cycle</i> | 273 |
| Genetics of Enzyme Formation | 273 |
| Isoenzymes | 275 |
| <i>The Cause of Enzyme Multiplicity</i> | 275 |
| <i>Primary or Genetic Isoenzymes</i> | 275 |
| <i>Isoenzymes due to Multiple Genetic Loci</i> | 275 |
| <i>Secondary or Post-translational Isoenzymes</i> | 276 |

18 PRODUCTION OF ENZYMES..... 277

| | |
|--|-----|
| Solid Substrate Fermentation | 277 |
| <i>Fermenters</i> | 277 |
| <i>Medium</i> | 277 |
| <i>Advantages</i> | 278 |
| <i>Disadvantages</i> | 278 |
| Submerged Fermentation | 278 |
| <i>Steps of Enzyme Production</i> | 279 |
| <i>Factors Affecting Submerged Culture</i> | 280 |
| Extraction of Enzyme..... | 281 |
| <i>Physical Disruption Method</i> | 281 |
| <i>Chemical Treatment Method</i> | 281 |
| Purification of Enzyme..... | 282 |

| | |
|---|-----|
| <i>Removal of Nucleic Acids and Cell Debris</i> | 282 |
| <i>Preliminary Purification</i> | 282 |
| <i>Final Purification</i> | 283 |

19 PRODUCTION OF ENZYMES BY FERMENTATION..... 284

| | |
|---|-----|
| Oxidoreductases | 284 |
| <i>Pyridine Nucleotide Dehydrogenases</i> | 284 |
| <i>NAD/NADP Dehydrogenase</i> | 284 |
| Oxidases | 285 |
| <i>Production of Glucose Oxidase</i> | 285 |
| <i>Cholesterol Oxidase</i> | 285 |
| Hydrolases..... | 286 |
| <i>Glycosidases</i> | 286 |
| <i>Cellulase</i> | 287 |
| <i>Proteolytic Enzymes</i> | 288 |
| Penicillin Amidases (penicillin acylase)..... | 289 |
| Transferases | 290 |
| <i>Glycosyl Transferases</i> | 290 |
| <i>Cyclodextrin glycosyl transferase</i> | 290 |
| Glycerol Kinase..... | 290 |
| Glucose Isomerase | 290 |
| <i>Production of Glucose Isomerase using Bacillus coagulans</i> | 291 |
| <i>Production by Streptomyces wedmorensis</i> | 291 |

20 APPLICATIONS OF ENZYMES..... 292

| | |
|---|-----|
| Applications in Pharmaceutical Industries | 292 |
| <i>Synthesis of Amino Acids</i> | 292 |
| <i>Synthesis of Nucleosides and Nucleotides</i> | 293 |
| <i>Synthesis of Other Compounds</i> | 293 |
| Applications in Therapeutics..... | 294 |
| <i>For Treatment of Gaucher's, Tay-sach's, and Fabry's Diseases</i> | 294 |
| Clinical Analysis | 295 |
| <i>Transferases</i> | 295 |

| | |
|---|-----|
| <i>Ornithine transcarbamylase</i> | 295 |
| <i>Creatine kinase</i> | 296 |
| <i>Oxidoreductases or</i> | |
| <i>Dehydrogenases</i> | 296 |
| <i>Hydrolases</i> | 296 |

21 ENZYME IMMOBILIZATION 298

| | |
|---------------------------------------|-----|
| Important Features Enzyme | |
| Immobilization..... | 298 |
| Disadvantages of Enzymes..... | 298 |
| Advantages of immobilized | |
| Enzymes..... | 299 |
| Properties of Immobilized | |
| Enzymes..... | 299 |
| Stability..... | 299 |
| Kinetic Properties..... | 299 |
| Types/Methods of Immobilization | 300 |
| Choice of Immobilization Method | 304 |
| Comparison and evaluation of | |
| Immobilization Techniques | 304 |
| Effects of Immobilization on | |
| Kinetics and Properties of | |
| Enzyme | 305 |
| <i>Michaelis Constant</i> | 305 |
| <i>Maximum Reaction Velocity</i> | |
| (<i>V_{max}</i>)..... | 305 |
| Immobilization Techniques for | |
| Cells..... | 307 |
| Cross-linking | 307 |
| Copolymerization..... | 307 |
| Covalent Binding | 307 |
| Adsorption | 307 |
| Entrapment | 307 |
| Bioreactors | 307 |
| Fermenter Design | |
| Considerations | 308 |
| Immobilized plant cell fermenters.... | 309 |
| Design and Applications of | |
| Bioreactors..... | 309 |
| Choice of Enzyme Reactor..... | 316 |

22 APPLICATIONS OF IMMOBILIZED ENZYMES.. 317

| | |
|----------------------------------|-----|
| Pharmaceutical Applications..... | 319 |
|----------------------------------|-----|

| | |
|---|-----|
| <i>Uses in Antibiotics Production</i> | 319 |
| <i>Steroids Production</i> | 322 |
| <i>Amino Acids Production</i> | 323 |
| <i>Acids Production</i> | 324 |
| <i>Other Organic Compounds</i> | |
| Production..... | 325 |
| Applications in Clinical Analysis..... | 326 |
| <i>Enzyme Electrodes (Biosensors)</i> | 326 |
| <i>Biosensor for Analysis of</i> | |
| <i>Organic Compounds</i> | 328 |
| <i>Conventional Biosensor</i> | 328 |
| <i>Microbial Biosensor</i> | 329 |
| <i>Development of Micro biosensor</i> | 329 |
| <i>Biosensors Using Amorphous</i> | |
| <i>Silicon ISFET</i> | 331 |
| <i>Micro-Oxygen Electrode</i> | 333 |
| <i>Integrated Multi-biosensor</i> | 334 |
| <i>Novel Biosensor Based on New</i> | |
| <i>Transducers</i> | 334 |

23 PLANT TISSUE CULTURE: BASIC CONCEPTS 336

| | |
|--|-----|
| Importance of Tissue Culture..... | 336 |
| <i>Global Picture of Plant Tissue</i> | |
| <i>Culture</i> | 337 |
| Plant Tissue Culture: Principles | 338 |
| <i>Callus Culture</i> | 339 |
| <i>Meristem Culture</i> | 339 |
| <i>Organ Culture</i> | 339 |
| The Concept of Totipotency of | |
| Cells..... | 340 |

24 PLANT TISSUE CULTURE: METHODS 342

| | |
|---------------------------------------|-----|
| Media preparation: Area/Room..... | 342 |
| Requirements | 342 |
| Z-Cabinets or Shelves..... | 342 |
| <i>Culture Media, Washing Powder/</i> | |
| <i>Liquid Detergent,</i> | |
| <i>Disinfectants</i> | 342 |
| Other Requirements | 343 |
| Aseptic Transfer Chamber Area | 343 |
| Environmentally Controlled | |
| Culture Room..... | 343 |

| | | | |
|---|-----|---|-----|
| <i>Analytical Room</i> | 344 | <i>Enzymatic method</i> | 366 |
| <i>Acclimatization Room</i> | 344 | <i>Mechanical method</i> | 366 |
| <i>Miscellaneous items</i> | 344 | Enzymic Isolation of Protoplasts: | |
| <i>Specifications of Laboratory</i> | | Method..... | 366 |
