

# Earth Surface Processes, Landforms and Sediment Deposits

John S. Bridge and Robert V. Demicco

CAMBRIDGE

# Contents

Acknowledgments	page vii
Figure credits	viii
<b>PART 1 Introduction</b>	<b>1</b>
1 Definitions, rationale, and scope of the book	3
2 Overview of the Earth	9
<b>PART 2 Production of sediment at the Earth's surface</b>	<b>43</b>
3 Weathering of rocks, production of terrigenous sediment, and soils	45
4 Biogenic and chemogenic sediment production	85
<b>PART 3 Fundamentals of fluid flow, sediment transport, erosion, and deposition</b>	<b>119</b>
5 Unidirectional turbulent water flow, sediment transport, erosion, and deposition	121
6 Air flow, sediment transport, erosion, and deposition	195
7 Multidirectional water flow, sediment transport, erosion, and deposition	213
8 Movement of sediment by gravity	255
9 Generation and movement of volcanoclastic sediment	278
10 Ice flow, sediment transport, erosion, and deposition	292
11 Biogenic and chemogenic depositional structures	311
12 Post-depositional deformation of soft sediment	352
<b>PART 4 Environments of erosion and deposition</b>	<b>363</b>
13 Rivers, alluvial plains, and fans	365
14 Lakes	462
15 Coasts and shallow seas	473
16 Arid environments	563
17 Glacial and periglacial environments	595
18 Deep seas and oceans	630
<b>PART 5 Sediment into rock: diagenesis</b>	<b>671</b>
19 Diagenesis	673

<b>PART 6 Long-term, large-scale processes: mountains and sedimentary basins</b>	701
<b>20 Tectonic, climatic, and eustatic controls on long-term, large-scale erosion and deposition</b>	703
<b>References</b>	742
<b>Index</b>	795

The plate section falls between pages 24 and 25
