

OXFORD

An Introduction to the **Economics** of **Information**

Incentives and Contracts

Second Edition

Inés Macho-Stadler
J. David Pérez-Castrillo

CONTENTS

Preface

vii

1. Introduction

1.1. Introduction	3
1.2. The Elements of the Problem	4
1.3. The Intertemporal Development of the Relationship and the Reference Framework	7
1.4. Types of Asymmetric Information Problems	9
1.4.1. Moral hazard	9
1.4.2. Adverse selection	11
1.4.3. Signalling	12

2. The Base Model

2.1. Introduction	17
2.2. Description of the Model	17
2.3. Symmetric Information Contracts	21
2.3.1. The optimal payment mechanism	23
2.3.2. The optimal level of effort	28
Exercises	31

3. The Moral Hazard Problem

3.1. Introduction	37
3.2. The Moral Hazard Problem	39
3.3. The Agent Chooses between Two Effort Levels	41
3.4. Solution Using the First-Order Approach	47

Contents

3.5. A Simple Case with Continuous Effort	49
3.6. Moral Hazard with Hidden Information	51
3.7. Some Comments on the Simple Moral Hazard Models	54
3.7.1. The value of information	55
3.7.2. Mechanisms based on severe punishments	55
3.7.3. The strategic effects of contracts	56
3.7.4. What happens when it is the agent who offers the contract?	57
3A. Complementary Material	57
3A.1. A geometric illustration of the moral hazard problem	57
3A.2. The problem that may be found when applying the first-order approach	63
3A.3. The risk-neutral agent case	64
3B. Applications	66
3B.1. Incentives for managers	66
3B.2. Fishing contracts between countries	68
3B.3. Moral hazard and rationing in the credit market	72
3B.4. Introduction of know-how in technology transfer contracts	75
Exercises	79
3C. Advanced Themes	87
3C.1. Optimal payment mechanisms in situations of moral hazard with several agents	87
3C.2. Organizational design in relationships with several agents	92
3C.3. Moral hazard with several tasks	94
3C.4. Repeated moral hazard	97
3C.5. Relationships between several principals and one agent	99

4. The Adverse Selection Problem

4.1. Introduction	103
4.2. A Model of Adverse Selection	106
4.3. When Principals Compete for Agents	117
4.3.1. The benchmark: Symmetric information	118
4.3.2. Principals cannot distinguish agent type	121
4.4. Adverse Selection with a Continuum of Possible Types	127
4.5. Comments	134
4A. Complementary Material	136

4A.1. Implementable mechanisms	136
4A.2. Moral hazard with private information (<i>ex ante</i> contract acceptance)	139
4B. Applications	142
4B.1. Competition between insurance companies	142
4B.2. An analysis of optimal licensing contracts	149
4B.3. Regulation in asymmetric information contexts	153
4B.4. Decision of monopoly product quality	157
Exercises	160
4C. Advanced Themes	168
4C.1. Relationship with several agents: Auctions	168
4C.2. Organization design	172
4C.3. Repeated adverse selection	176
4C.4. Models of moral hazard and adverse selection	179
4C.5. Several principals	180

5. Signalling

5.1. Introduction	185
5.2. The Value of Private Information and of Signalling	185
5.3. Education as a Signal	189
5.4. The Agents Signal their Characteristic	190
5.4.1. Separating equilibrium	193
5.4.2. Pooling equilibrium	195
5.4.3. Conclusion	197
5.5. The Informational Power of Contracts	199
5.5.1. Symmetric information	200
5.5.2. The agent is uninformed as to difficulty of the job	201
5.5.3. Separating equilibria	202
5.6. Comments	209
5A. Complementary Material	210
5A.1. The intuitive criterium	210
5B. Applications	212
5B.1. Prices that signal quality	212
5B.2. Optimal licensing contracts when the seller has private information	213
5B.3. Debt level as a signal of the value of a firm	217
Exercises	219

Contents

5C. Advanced Themes	224
5C.1. Equilibrium refinements	224
5C.2. Cheap-talk games	226
5C.3. Optimal design of mechanisms in signalling models	228
Mathematical Appendix: Concavity and Optimization	231
<i>References</i>	237
<i>Solution to the Exercises</i>	245
<i>Index</i>	275
<i>Additional Exercises</i>	279
