

Leszek Rutkowski

Computational Intelligence

**METHODS
AND
TECHNIQUES**

Springer

Contents

Foreword	v
1 Introduction	1
2 Selected issues of artificial intelligence	7
2.1 Introduction	7
2.2 An outline of artificial intelligence history	8
2.3 Expert systems	10
2.4 Robotics	11
2.5 Processing of speech and natural language	13
2.6 Heuristics and research strategies	15
2.7 Cognitivism	16
2.8 Intelligence of ants	17
2.9 Artificial life	19
2.10 Bots	20
2.11 Perspectives of artificial intelligence development	22
2.12 Notes	23
3 Methods of knowledge representation using rough sets	25
3.1 Introduction	25
3.2 Basic terms	27
3.3 Set approximation	34
3.4 Approximation of family of sets	44
3.5 Analysis of decision tables	46

3.6	Application of LERS software	54
3.7	Notes	61
4	Methods of knowledge representation using type-1 fuzzy sets	63
4.1	Introduction	63
4.2	Basic terms and definitions of fuzzy sets theory	63
4.3	Operations on fuzzy sets	76
4.4	The extension principle	83
4.5	Fuzzy numbers	87
4.6	Triangular norms and negations	96
4.7	Fuzzy relations and their properties	108
4.8	Approximate reasoning	112
4.8.1	Basic rules of inference in binary logic	112
4.8.2	Basic rules of inference in fuzzy logic	114
4.8.3	Inference rules for the Mamdani model	118
4.8.4	Inference rules for the logical model	119
4.9	Fuzzy inference systems	122
4.9.1	Rules base	123
4.9.2	Fuzzification block	124
4.9.3	Inference block	125
4.9.4	Defuzzification block	131
4.10	Application of fuzzy sets	134
4.10.1	Fuzzy Delphi method	134
4.10.2	Weighted fuzzy Delphi method	138
4.10.3	Fuzzy PERT method	139
4.10.4	Decision making in a fuzzy environment	142
4.11	Notes	153
5	Methods of knowledge representation using type-2 fuzzy sets	155
5.1	Introduction	155
5.2	Basic definitions	156
5.3	Footprint of uncertainty	160
5.4	Embedded fuzzy sets	162
5.5	Basic operations on type-2 fuzzy sets	164
5.6	Type-2 fuzzy relations	169
5.7	Type reduction	172
5.8	Type-2 fuzzy inference systems	178
5.8.1	Fuzzification block	178
5.8.2	Rules base	180
5.8.3	Inference block	180
5.9	Notes	186

6	Neural networks and their learning algorithms	187
6.1	Introduction	187
6.2	Neuron and its models	188
6.2.1	Structure and functioning of a single neuron	188
6.2.2	Perceptron	190
6.2.3	Adaline model	196
6.2.4	Sigmoidal neuron model	202
6.2.5	Hebb neuron model	206
6.3	Multilayer feed-forward networks	208
6.3.1	Structure and functioning of the network	208
6.3.2	Backpropagation algorithm	210
6.3.3	Backpropagation algorithm with momentum term	218
6.3.4	Variable-metric algorithm	220
6.3.5	Levenberg-Marquardt algorithm	221
6.3.6	Recursive least squares method	222
6.3.7	Selection of network architecture	225
6.4	Recurrent neural networks	232
6.4.1	Hopfield neural network	232
6.4.2	Hamming neural network	236
6.4.3	Multilayer neural networks with feedback	238
6.4.4	BAM network	238
6.5	Self-organizing neural networks with competitive learning	240
6.5.1	WTA neural networks	240
6.5.2	WTM neural networks	246
6.6	ART neural networks	250
6.7	Radial-basis function networks	254
6.8	Probabilistic neural networks	261
6.9	Notes	263
7	Evolutionary algorithms	265
7.1	Introduction	265
7.2	Optimization problems and evolutionary algorithms	266
7.3	Type of algorithms classified as evolutionary algorithms	267
7.3.1	Classical genetic algorithm	268
7.3.2	Evolution strategies	289
7.3.3	Evolutionary programming	307
7.3.4	Genetic programming	309
7.4	Advanced techniques in evolutionary algorithms	310
7.4.1	Exploration and exploitation	310
7.4.2	Selection methods	311
7.4.3	Scaling the fitness function	314
7.4.4	Specific reproduction procedures	315
7.4.5	Coding methods	317
7.4.6	Types of crossover	320

7.4.7	Types of mutation	322
7.4.8	Inversion	323
7.5	Evolutionary algorithms in the designing of neural networks	323
7.5.1	Evolutionary algorithms applied to the learning of weights of neural networks	324
7.5.2	Evolutionary algorithms for determining the topology of the neural network	327
7.5.3	Evolutionary algorithms for learning weights and determining the topology of the neural network	330
7.6	Evolutionary algorithms vs fuzzy systems	332
7.6.1	Fuzzy systems for evolution control	333
7.6.2	Evolution of fuzzy systems	335
7.7	Notes	344
8	Data clustering methods	349
8.1	Introduction	349
8.2	Hard and fuzzy partitions	350
8.3	Distance measures	354
8.4	HCM algorithm	357
8.5	FCM algorithm	359
8.6	PCM algorithm	360
8.7	Gustafson-Kessel algorithm	361
8.8	FMLE algorithm	363
8.9	Clustering validity measures	364
8.10	Illustration of operation of data clustering algorithms	367
8.11	Notes	369
9	Neuro-fuzzy systems of Mamdani, logical and Takagi-Sugeno type	371
9.1	Introduction	371
9.2	Description of simulation problems used	372
9.2.1	Polymerization	372
9.2.2	Modeling a static non-linear function	373
9.2.3	Modeling a non-linear dynamic object (Nonlinear Dynamic Problem - NDP)	373
9.2.4	Modeling the taste of rice	374
9.2.5	Distinguishing of the brand of wine	374
9.2.6	Classification of iris flower	374
9.3	Neuro-fuzzy systems of Mamdani type	375
9.3.1	A-type systems	375
9.3.2	B-type systems	377
9.3.3	Mamdani type systems in modeling problems	378
9.4	Neuro-fuzzy systems of logical type	390
9.4.1	M1-type systems	392
9.4.2	M2-type systems	399
9.4.3	M3-type systems	405

9.5	Neuro-fuzzy systems of Takagi-Sugeno type	410
9.5.1	M1-type systems	413
9.5.2	M2-type systems	414
9.5.3	M3-type systems	416
9.6	Learning algorithms of neuro-fuzzy systems	418
9.7	Comparison of neuro-fuzzy systems	435
9.7.1	Models evaluation criteria taking into account their complexity	437
9.7.2	Criteria isolines method	439
9.8	Notes	448
10	Flexible neuro-fuzzy systems	449
10.1	Introduction	449
10.2	Soft triangular norms	449
10.3	Parameterized triangular norms	452
10.4	Adjustable triangular norms	456
10.5	Flexible systems	461
10.6	Learning algorithms	463
10.6.1	Basic operators	470
10.6.2	Membership functions	471
10.6.3	Constraints	473
10.6.4	H -functions	473
10.7	Simulation examples	479
10.7.1	Polymerization	480
10.7.2	Modeling the taste of rice	480
10.7.3	Classification of iris flower	482
10.7.4	Classification of wine	484
10.8	Notes	492
