<i>Preface</i>	xix
----------------------	-----

Part I Chemical contaminants, chemical use in aquaculture and farmed fish safety

1 The risks and benefits of consumption of farmed fish	3
---	----------

*J. Tuomisto, KTL National Public Health Institute, Finland and
L. Frøyland, National Institute of Nutrition and Seafood Research
(NIFES), Norway*

1.1 Introduction: the human health implications of consumption of farmed fish	3
1.2 Nutrients in fish and other seafood	3
1.3 Methods to assess the human health implications of fish consumption	6
1.4 Fish consumption, cardiovascular mortality and morbidity ...	8
1.5 Fish consumption, stroke and Alzheimer's disease	12
1.6 Omega-3 fatty acids and psychiatric disorders	13
1.7 Effect of fish consumption and omega-3 fatty acids on the development of the nervous system	13
1.8 Cancer	15
1.9 Health risks from methyl mercury intake through fish consumption	15
1.10 Risks of persistent organic pollutants	19

1.11	Risks and benefits of fish consumption	23
1.12	Future trends	26
1.13	Sources of further information and advice	26
1.14	References	27
2	Environmental contaminants in farmed fish and potential consequences for seafood safety	39
	<i>M. H. G. Berntssen and A.-K. Lundebye, National Institute of Nutrition and Seafood Research (NIFES), Norway</i>	
2.1	Introduction	39
2.2	Environmental contaminants and marine feed ingredients	40
2.3	Organic contaminants	41
2.4	Metals	49
2.5	Carry-over of environmental contaminants to farmed fish ...	54
2.6	Reducing the level of environmental contaminants to farmed fish	60
2.7	Future trends	63
2.8	Sources of further information and advice	63
2.9	References	64
3	Pesticide contamination in farmed fish: assessing risks and reducing contamination	71
	<i>D. C. Little, G. K. Milwain and C. Price, University of Stirling, Scotland</i>	
3.1	Introduction	71
3.2	Trends in pesticide use in fish farming and in the vicinity of fish farms	72
3.3	Risks to human health of pesticides in aquaculture products .	78
3.4	Detecting pesticide residues in farmed fish	81
3.5	Controlling pesticide use in aquaculture	85
3.6	Pesticides in fish feeds	89
3.7	Future trends	91
3.8	Sources of further information and advice	91
3.9	References and further reading	91
4	Veterinary drug use in aquaculture	97
	<i>B. T. Lunestad, National Institute of Nutrition and Seafood Research (NIFES), Norway and O. Samuelsen, Institute of Marine Research, Norway</i>	
4.1	Introduction	97
4.2	Commonly-used veterinary drugs and routes of administration	98
4.3	Drugs used in aquaculture: antibacterial agents	99
4.4	Antiparasitic agents	106
4.5	Anaesthetic agents	112

4.6	Antifungal agents	114
4.7	Trends in drug use in aquaculture	115
4.8	Future trends	122
4.9	Sources of further information and advice	122
4.10	References	122
5	Assessing the human health implications of new veterinary drugs used in fish farming	128
	<i>R. Reimschuessel, US Food and Drug Administration (USFDA), USA</i>	
5.1	Introduction	128
5.2	The regulation of veterinary drug use	129
5.3	Measuring drug residues in foods	129
5.4	Withdrawal times versus drug half-lives	132
5.5	What is unique about using veterinary drugs in fish?	133
5.6	Pharmacokinetics data and fish drug withdrawal times	138
5.7	Regulations and exemptions	140
5.8	Human health concerns	142
5.9	References	145
6	Antibiotic resistance associated with veterinary drug use in fish farms	157
	<i>H. Sørum, Norwegian School of Veterinary Science, Norway</i>	
6.1	Introduction: veterinary drug use in aquaculture	157
6.2	Current use of antibiotics in fish farming and the extent of antimicrobial resistance	158
6.3	Antimicrobial resistance in fish pathogens within the aquaculture industry	160
6.4	Antibiotic resistance in <i>Vibrio</i> bacteria	160
6.5	Antibiotic resistance in aeromonads	162
6.6	Antibiotic resistance in <i>Photobacterium damsela</i> subspecies <i>piscicida</i>	169
6.7	Antibiotic resistance in enterobacteria	170
6.8	Transfer of antibiotic resistance between bacteria in fish farms	172
6.9	Risk of transfer of antibiotic resistance from fish farm bacteria to human pathogens	174
6.10	Improving management and monitoring of antibiotic use in fish farms	175
6.11	Future trends	176
6.12	References	176
7	Improving disease immunity to reduce antibiotic use in farmed fish	183
	<i>Ø. Bergh and A. H. Nerland, Institute of Marine Research, Norway</i>	
7.1	Introduction	183
7.2	Immunity in fish	183

7.3	Developing vaccines	185
7.4	Developing feed-based immunostimulants	191
7.5	Impact of prophylaxis on the reduction of antibiotic use in fish .	191
7.6	Implications for farmed fish welfare, safety and quality	193
7.7	The current situation and future trends	195
7.8	References and further reading	196
8	Different methods to reduce antibiotic use in farmed fish	199
	<i>F. J. Gatesoupe, INRA – Ifremer, France</i>	
8.1	Introduction	199
8.2	The prophylactic approach: hygiene, welfare and feeding	200
8.3	Microbial management	205
8.4	The therapeutic approach: antimicrobial compounds	212
8.5	Future trends	219
8.6	Sources of further information and advice	222
8.7	References	223
Part II	Improving farmed fish quality	
9	Understanding factors affecting flesh quality in farmed fish ...	241
	<i>M. Espe, National Institute of Nutrition and Seafood Research (NIFES), Norway</i>	
9.1	Introduction	241
9.2	The structure and nutritional composition of fish muscle	242
9.3	The biological basis for growth and development in fish	247
9.4	Understanding the effects of environmental parameters on flesh quality	252
9.5	Understanding the effects of genetics on flesh quality	255
9.6	Future trends	255
9.7	Sources of further information and advice	256
9.8	References	257
10	Improving farmed fish quality by selective breeding	265
	<i>T. Gjedrem, Institute of Aquaculture Research, Norway</i>	
10.1	Introduction	265
10.2	Quality traits to be improved	266
10.3	Genetic parameters	269
10.4	Possibilities for genetic improvement in quality traits	271
10.5	Conclusions	273
10.6	References	274
11	Alternative lipid sources for fish feed and farmed fish quality .	275
	<i>J. G. Bell, University of Stirling, Scotland</i>	
11.1	Introduction: why do we require alternative lipid sources for fish feeds?	275

11.2	Role of dietary lipids in fish growth performance	276
11.3	Role of dietary lipids in fish health and welfare	279
11.4	Role of dietary lipids in eating quality	282
11.5	What are the benefits and risks of using different lipid sources?	286
11.6	Future trends	289
11.7	References	291
12	Plant proteins as alternative sources for fish feed and farmed fish quality	300
	<i>S. J. Kaushik, INRA, France and G.-I. Hemre, National Institute of Nutrition and Seafood Research (NIFES), Norway</i>	
12.1	Introduction	300
12.2	Global fish meal resources and availability	300
12.3	Meeting protein and amino acid requirements in fish	301
12.4	Oilseed meals	309
12.5	Reducing anti-nutrients and other undesirable compounds in alternative protein ingredients	311
12.6	Development of non-fish meal or low-fish meal diets	313
12.7	Supplementation of fish meal with limiting amino acids	314
12.8	Future trends	318
12.9	References	319
13	Alternative marine sources of fish feed and farmed fish quality	328
	<i>R. W. Hardy, University of Idaho, USA</i>	
13.1	Introduction	328
13.2	Fisheries by-catch and seafood processing by-products	329
13.3	Crustacean and shellfish by-products	335
13.4	Krill	336
13.5	Other alternative marine sources of fish feed	337
13.6	Future trends	339
13.7	Sources of further information and advice	340
13.8	References	340
14	Tailor-made functional seafood for consumers: dietary modulation of selenium and taurine in farmed fish	343
	<i>J. Luten, Nofima Marine, Norway, E. Schram, Wageningen IMARES, The Netherlands and E. Elvevoll, University of Tromsø, Norway</i>	
14.1	Introduction	343
14.2	Nutritional and health-promoting properties of selenium	344
14.3	Nutritional and health-promoting properties of taurine	349
14.4	Dietary modulation of selenium and taurine in farmed fish ..	353
14.5	Future trends of dietary modulation of farmed fish	356
14.6	References	357

15 Reducing production-related diseases in farmed fish	363
<i>R. Waagbø, National Institute of Nutrition and Seafood Research (NIFES), Norway</i>	
15.1 Introduction	363
15.2 Fish nutrition as a major determinant for fish health	364
15.3 Nutritional and environment-related bone disorders in farmed fish	370
15.4 Nutritional and environmental conditions related to cataract development in fish	375
15.5 Other production-related diseases	379
15.6 Conclusions	385
15.7 Future trends	386
15.8 Sources of further information and advice	386
15.9 Acknowledgements	387
15.10 References	387
16 Microbiological quality and safety of farmed fish	399
<i>B. T. Lunestad, National Institute of Nutrition and Seafood Research (NIFES), Norway and J. T. Rosnes, Norconserv AS, Norway</i>	
16.1 Introduction: microorganisms, quality and safety	399
16.2 Microorganisms affecting fish spoilage	399
16.3 Specific spoilage organisms	401
16.4 Microbiological safety issues related to farmed fish	404
16.5 Prions and viruses	405
16.6 Bacteria, fungi and mycotoxins	409
16.7 Predictive models for seafood safety and shelf-life	421
16.8 Future trends	422
16.9 Sources of further information and advice	423
16.10 References	424
17 Parasites in farmed fish and fishery products	428
<i>A. Levsen and B. T. Lunestad, National Institute of Nutrition and Seafood Research (NIFES), Norway and B. Berland, University of Bergen, Norway</i>	
17.1 Introduction	428
17.2 Types of parasite	430
17.3 Reducing fish quality	432
17.4 Fish parasites and consumer health considerations	441
17.5 Legislation and control	443
17.6 Future trends	443
17.7 References	444
18 Colouration and flesh quality in farmed salmon and trout	446
<i>S. J. Davies, University of Plymouth, UK</i>	
18.1 Introduction	446
18.2 Sources of pigmenting carotenoids for aquafeeds	447

18.3	Metabolism of carotenoids in fish and flesh deposition characteristics	448
18.4	Pigmentation and fish husbandry	451
18.5	Pigmentation and diet	454
18.6	Comparing commercial pigment sources	456
18.7	Genetics and pigmentation	457
18.8	Legislation governing pigmentation of salmonid fish	462
18.9	Fish colouration, market and consumer acceptance	463
18.10	Acknowledgement	465
18.11	References	465
19	Off-flavour problems in farmed fish	471
	<i>Z. G. Papp, Research Institute for Fisheries Aquaculture and Irrigation, Hungary</i>	
19.1	Introduction: off-flavour problems in farmed fish	471
19.2	Sources and characterisation of off-flavours in farmed fish ..	472
19.3	Detecting off-flavours in farmed fish	476
19.4	Avoiding the formation of off-flavours in farmed fish	480
19.5	Off-flavour problems in particular fish species	485
19.6	Future trends	486
19.7	Sources of further information and advice	488
19.8	References	489
20	Husbandry techniques and fish quality	494
	<i>B. Damsgård, Nofima Marine, Norway</i>	
20.1	Introduction	494
20.2	Terms and definitions	497
20.3	Fish farmers and consumers seeking a common destiny	500
20.4	Welfare during the production cycle	502
20.5	Welfare during slaughter of farmed fish	506
20.6	Monitoring ethical qualities in farmed fish	509
20.7	Future trends	511
20.8	Sources of further information and advice	512
20.9	References	513
Part III Managing farmed fish quality and safety		
21	HACCP and other programs to ensure safe products and for sustainable fish farming	517
	<i>M. Jahncke and M. Schwarz, Virginia Seafood AREC, Virginia Tech, USA</i>	
21.1	Introduction	517
21.2	Aquaculture, food safety and HACCP systems	517
21.3	Implementing a HACCP system in aquaculture: a case study ..	520
21.4	Information needed to support a HACCP program	522
21.5	General biosecurity guidelines: an example	527

21.6	Standard operating procedures: an example	529
21.7	Disaster planning: the example of standard operating procedures for hurricanes	540
21.8	Future trends	541
21.9	Sources of further information and advice	543
21.10	References	544
22	Monitoring and surveillance to improve farmed fish safety	547
	<i>A. Maage, H. Hove and K. Julshamn, National Institute of Nutrition and Seafood Research (NIFES), Norway</i>	-
22.1	Introduction: importance of monitoring to improve and document farmed fish safety	547
22.2	Production of fish feed	548
22.3	Monitoring fish feed components and fish feed	548
22.4	Monitoring of water quality and its relevance for food quality	555
22.5	Monitoring of food quality of aquaculture fish	555
22.6	Knowledge dissemination	562
22.7	Future trends	562
22.8	Sources of further information and advice	563
22.9	References	563
23	Confirming the origin of wild and farmed fish	565
	<i>M. Lees and F. Thomas, Eurofins Scientific Analytics, France</i>	
23.1	Introduction: the importance of confirming the origin of wild and farmed fish	565
23.2	Methods to confirm the origin of wild and farmed fish	566
23.3	Application of combined compositional and isotopic methodology to different fish species	574
23.4	Future trends	579
23.5	Sources of further information and advice	581
23.6	References	581
24	Farmed fish labelling	585
	<i>P. Najran, Food Standards Agency, UK</i>	
24.1	Introduction: the importance of aquaculture and correct labelling	585
24.2	General food labelling legislation	588
24.3	Fish labelling legislation	591
24.4	Scottish Farmed Salmon: a special case	602
24.5	Eco-labelling	604
24.6	Future trends	607
24.7	Acknowledgements	608
24.8	Sources of further information and advice	608
24.9	References	609
