Foreword	ix
Preface	xi
Acknowledgements	xiii
Chapter 1 Introduction	1
Chapter 2 History	6
Chapter 3 Design considerations	19
3.1 General, 19	
3.2 Choice of site, 20	
3.3 Choice of structure, 24	
3.4 Economic considerations, 27	
3.5 Environmental considerations, 27	
3.6 Electronic considerations, 30	
3.6.1 General, 30	
3.6.2 Antenna characteristics, 33	
3.6.3 Low-frequency antennas, 37	
3.6.4 Medium-frequency antenna systems, 41	
3.6.5 VHF and UHF antennas, 44	
3.6.6 Digital audio broadcasting, 49	
3.6.7 Mobile phone antennas, 51	
3.7 Effect on existing services of subsequent additional antennas, 54	
Chapter 4 Failures of masts and towers	56
4.1 General, 56	

- 4.2 Icing failures, 59
- 4.3 Design/detail failures, 61
- 4.4 Maintenance failures, 63
- 4.5 Aircraft damage, 65
- 4.6 Vandal damage, 68
- 4.7 Lessons to be learned, 69

Chapter 5 Forms of structure 71

- 5.1 General, 71
- 5.2 Timber towers, 71
- 5.3 Concrete towers, 71
- 5.4 Lattice steel towers, 75
- 5.5 Lattice guyed masts, 81
- 5.6 Tubular guyed masts, 87
- 5.7 Concrete guyed masts, 90
- 5.8 Other forms of communication structures, 91

Chapter 6 Meteorological parameters 93

- 6.1 General, 93
- 6.2 Wind, 93
 - 6.2.1 Wind climate, 95
 - 6.2.2 Boundary layer, 99
 - 6.2.3 Serviceability wind speeds, 102
- 6.3 Atmospheric icing, 104
 - 6.3.1 General, 104
 - 6.3.2 Physics and theoretical modelling of ice accretion, 107
 - 6.3.3 Empirical models to estimate ice loads on structures, 109
- 6.4 Earthquakes, 113
- 6.5 Temperature, 114
- 6.6 Other meteorological aspects, 115

Chapter 7 Wind resistance 117

- 7.1 General, 117
- 7.2 Symmetrical structures without ancillaries, 122
- 7.3 Symmetrical structures with limited ancillaries, 128
- 7.4 General method for structures containing ancillaries, 129
- 7.5 Linear ancillaries, 133
- 7.6 Discrete ancillaries, 133
- 7.7 Cables, 133

- 7.8 Measurements on scale model of communications tower, 134
- 7.9 Discrepancy between wind tunnel tests and full-scale measurements, 137
- 7.10 Icing, 140

Chapter 8 Response 147

- 8.1 General, 147
- 8.2 Lattice towers, 148
- 8.3 Guyed masts, 150
 - 8.3.1 General, 150
 - 8.3.2 Frequency domain analysis, 152
 - 8.3.3 Time domain analysis, 157
 - 8.3.4 Simplified methods, 159
 - 8.3.5 Summary, 176

Chapter 9 Strength 177

- 9.1 Introduction, 177
- 9.2 Design against buckling – individual members, 178
 - 9.2.1 General, 178
 - 9.2.2 Influence of local and torsional buckling, 180
 - 9.2.3 Angle leg members, 181
 - 9.2.4 Angle bracing members, 182
 - 9.2.5 Tubular leg members, 184
 - 9.2.6 Tubular bracing members, 184
 - 9.2.7 Solid round members, 184
- 9.3 Secondary members ('redundants'), 185
- 9.4 Bracing types, 186
- 9.5 Compound members, 189
- 9.6 Tension, 190
- 9.7 Connections, 190
 - 9.7.1 General, 190
 - 9.7.2 Flange joints in tubular or solid round leg members, 190
 - 9.7.3 Guy connections, 192

Chapter 10 Cables 195

- 10.1 General, 195
- 10.2 Types of cables, 195
- 10.3 Strength of guy ropes, 202
- 10.4 Rotational characteristics of steel ropes, 202

- 10.5 Modulus of elasticity, 203
- 10.6 Prestretching, 203
- 10.7 Still air tension, 206
- 10.8 Terminations, 206
- 10.8.1 General, 206
- 10.8.2 Types of terminations, 207

Chapter 11 Aerodynamic stability 210

- 11.1 General, 210
- 11.2 Vortex shedding, 211
- 11.2.1 General, 211
- 11.2.2 Background and critical wind speed, 211
- 11.2.3 Practical implications, 213
- 11.2.4 Damping devices, 214
- 11.3 Galloping, 216
- 11.3.1 General, 216
- 11.3.2 Critical wind speed, 216
- 11.3.3 Damping devices, 219

Chapter 12 Fatigue 220

- 12.1 General, 220
- 12.2 Lattice towers, 223
- 12.3 Lattice masts, 223
- 12.4 Guys, 226

Chapter 13 Foundations 228

- 13.1 General, 228
- 13.2 Foundation types, 228
- 13.2.1 Type I: to resist uplift, 228
- 13.2.2 Type II: to resist overturning, 231
- 13.2.3 Type III: to resist down thrust, 233
- 13.2.4 Type IV: guy anchorages, 233

Chapter 14 Codes and standards 239

- 14.1 History, 239
- 14.1.1 General, 239
- 14.1.2 Wind loading, 239
- 14.1.3 Ice loading, 242
- 14.1.4 Strength, 243
- 14.1.5 Other aspects, 243
- 14.2 Current codes, 244

14.2.1	General, 244	
14.2.2	Comparison of current Codes, 245	
Chapter 15	Access and safety	246
15.1	General, 246	
15.2	IASS Recommendations for safe access, 249	
Chapter 16	Fabrication and erection	251
16.1	Materials and fabrication, 251	
16.1.1	Steel for towers and mast columns, 251	
16.1.2	Aluminium, 257	
16.1.3	Timber, 257	
16.1.4	Plastics, 258	
16.2	Erection, 258	
16.2.1	General, 258	
16.2.2	Erection of lattice towers, 259	
16.2.3	Erection of guyed masts, 259	
Chapter 17	Maintenance	264
17.1	General, 264	
17.2	Constraints, 264	
17.3	Minimizing maintenance at the design stage, 265	
17.4	Manuals, 267	
Chapter 18	Seismic response	269
18.1	General, 269	
18.2	Seismicity and earthquake-resistance performance levels, 270	
18.3	Prediction of seismic response of structures, 271	
18.3.1	General, 271	
18.3.2	Self-supporting lattice towers, 272	
18.3.3	Monopoles, 273	
18.3.4	Guyed masts, 273	
18.3.5	Antennas and ancillary components, 275	
18.4	Geotechnical considerations, 275	
Annex A	Codes of Practice and Design Standards	276
A.1	General, 276	
A.2	Comparisons of National Codes, 277	
A.3	Scope, 277	
A.4	Limit states/reliability classes, 277	
A.5	Wind structure, 279	

Communications structures

- A.5.1 General, 279
- A.5.2 Wind resistance, 286
- A.6 Ice loading, 292
- A.7 Displacements/serviceability, 293
- A.8 Partial safety factors, 295
- A.9 Strength, 298
 - A.9.1 Compressive strength, 298
 - A.9.2 Tensile strength, 303
 - A.9.2.1 Steel structure, 303
 - A.9.2.2 Guys, 303
- A.10 Guy assemblies, 304
 - A.10.1 General, 304
 - A.10.2 Prestretching, 304
 - A.10.3 Terminations, 304
 - A.10.4 Initial tensions, 305
- A.11 Erection, 305
- A.12 Insulators, 305
- A.13 Access, 307

Annex B IASS Working Group Number 4: Masts and Towers 308

- B.1 Brief history, 308
- B.2 Role in the future, 308
- B.3 The members of the Group, 309
