1. INTRODUCTION 1

1.1 General 1
1.2 Description of Structures 3
1.3 Arrangement of Topics in the Report 3
1.4 Atmospheric Icing 8
1.4.1 Fundamentals of Atmospheric Icing 8
1.4.2 Ice Loading 8
1.4.3 Effect of Icing on the Dynamic Behavior of Masts and Towers 9
1.5 Wind-induced Vibrations in Structural Members 9
1.5.1 Vortex Shedding 10
1.5.2 Shape Modification 10
1.5.3 Torsional Oscillations 11
1.6 Current Standards and Codes of Practice 11
1.7 References 12
1.8 Bibliography 13
1.8.1 Ice Loading 13
1.8.2 Standards 13
1.8.3 Tower Failures 14

2. DYNAMICS OF CABLES AND TOWERS 15

2.1 Static Behavior of Guy Cables 15
2.2 Dynamic Behavior of Guy Cables 18
2.2.1 Overview 18
2.2.2 Natural Frequencies and Mode Shapes 19
2.2.3 Dynamic Stiffness of Guy Cables 21
2.2.4 Nonlinear Dynamic Effects 25
2.3 Guy Rupture 28
2.4 Tower Frequencies and Mode Shapes 30
2.4.1 General 30
2.4.2 Experimental Measurements of Natural Frequencies 31
2.4.3 Calculated Values 31
2.4.3.1 Self-supporting Towers 31
2.4.3.2 Guyed Towers 33
2.4.4 Simplified Procedures 37
2.4.4.1 Self-supporting Towers 37
(a) Work of Galvez (1995) 37
(b) *Work of Sackmann (1996* 38
(c) *European Prestandard Draft ENV 1998-3 (Eurocode)* 42
(d) Australian Standard AS 3995-1994 43

(e) Performance of Various Predictors of "f_1" 44
2.4.4.2 Guyed Towers 44
(a) Work of Amiri (1997) 44
(b) Work of Wahba (1999) 44
(c) Australian Standard AS 3995-1994 45
2.5 Field Measurements on Full Scale Lattice Towers 46
2.6 Notation 46
2.7 References 49
2.8 Bibliography 51
2.8.1 Dynamics of Cables 51
2.8.2 Experimental Investigation 53

3. DYNAMIC ANALYSIS 58

3.1 General 58
3.2 Structure Modeling 59
3.2.1 Discrete Structural Model 59
3.2.2 Linear Stiffness Model 60
3.2.3 Mass Distribution Models 61
3.2.4 Damping Models 62
3.2.4.1 Rayleigh (Viscous) Damping Approximation 62
3.2.4.2 Structural (Non-viscous) Damping Approximation 63
3.2.5 Element Transformations and Assembly 65
3.2.6 Initial and Boundary Conditions 68
3.3 Linear Dynamic Analysis 68
3.3.1 Modal Analysis 69
3.3.1.1 Eigenvalue Decomposition 69
3.3.1.2 Load-Dependent Ritz Vector Decomposition 70
3.3.1.3 Mode Superposition 71
3.3.2 Response Spectrum Analysis 73
3.3.3 Time History Analysis 76
3.4 Nonlinear Dynamic Analysis 78
3.4.1 Nonlinear Truss Model 78
3.4.2 First Order Geometric Nonlinear Frame Member Model 79
3.4.3 Nonlinear Flexible Connection Model 80
3.4.4 Time History Analysis 82
3.5 Notation 87
3.5.1 Scalar Variables 87
3.5.2 Vector Variables 90
3.5.3 Matrix Variables 91
3.5.4 Subscripts 93
3.5.5 Superscripts 93
3.6 References 93
3.7 Bibliography 95
Appendix-A: Flexibly Connected Linear Beam Element Stiffness Equations 100

Appendix-B: Flexibly Connected Nonlinear Beam Element Stiffness Equations 103

4. WIND LOADS AND RESPONSE 110

4.1 Wind Loads 110
4.1.1 Design Wind Speed 110
4.1.2 Design Mean Wind Speed 111
4.1.3 Mean Wind Speed Profiles 112
4.1.4 Turbulence 114
4.1.5 Numerical Simulations of Wind Turbulence Time Histories 118
4.1.6 Drag-Related Wind Forces 120
4.1.6.1 Drag Force Components 120
4.1.6.2 Effective Drag Resistance for Lattice Towers 121
4.1.7 Forces Induced by Vortex Shedding 122
4.2 Wind-induced Response 125
4.2.1 Dynamic Response to Turbulent Buffeting 125
4.2.1.1 Overview 125
4.2.1.2 Static Gust Factor Method 126
4.2.1.3 Dynamic Analysis in the Frequency Domain 128
4.2.1.4 Static Approach Using Influence Lines 133
4.2.1.5 Special Considerations for Guyed Towers 135
(a) Dynamic Response Characteristics of Guyed Towers 135
(b) Patch Load Dynamic Analysis Method for Guyed Towers 137
(c) Single Load Case Methods for Estimating the Dynamic Response of Guyed Towers 139
4.2.1.6 Cross Wind Response due to Turbulent Buffeting 140
(a) Self-supporting Towers 140
(b) Guyed Towers 141
4.2.2 Dynamic Response to Vortex Shedding 143
4.2.3 Fatigue of Lattice Towers 146
4.2.3.1 Fatigue due to Vortex Shedding 146
4.2.3.2 Fatigue due to In-Line Vibrations 148
4.3 Experimental Investigation of a Full-Scale Self-supporting Tower 149
4.4 European Practice for Wind Analysis 149
4.4.1 Methods of Analysis for Wind Loading of Self-supporting Towers Specified in EC3 and BS 8100 149
4.4.2 Methods of Analysis for Wind Loading of Guyed Masts Specified in IASS 150
4.5 Comparison of Different Methods of Wind Analysis of Guyed Masts 150
4.6 ANSI/TIA/EIA-222 -G Standard (Draft G.2e) 153

4.6.1 General 153
4.6.2 Modification Factors 154
4.6.3 Total Response 155
4.7 Notation 156
4.8 References 159
4.9 Bibliography 162
Appendix-A: Dynamic Response to Wind – Sample Calculation Results 166

5. SEISMIC INPUT AND RESPONSE 178

5.1 General 178
5.2 Seismicity and Hazard Level 178
5.3 Ground Accelerograms 179
5.3.1 Vertical Ground Motion 180
5.3.2 Components of Horizontal Ground Motion 180
5.3.3 Multiple-support Excitation 180
5.4 Earthquake Design Response Spectra 181
5.5 Response to Earthquakes 184
5.5.1 General 184
5.5.2 Field Observations 185
5.5.3 Numerically Simulated Results using Dynamic Analysis 186
5.5.3.1 Self-supporting Towers 186
5.5.3.2 Guyed Towers 186
(a) Base Shear 187
(b) Axial Forces in the Mast 187
(c) Cable Tensions 187
(d) Other Trends in Tower Response 188
5.5.4 Approximate Static Methods 188
5.5.4.1 Self-supporting Towers 188
(a) Work of Gálvez 188
(b) Work of Khedr 191
5.5.4.2 Guyed Towers 199
5.5.5 Existing Guidelines for Earthquake-Resistant Design 199
5.5.5.1 ANSI/TIA/EIA-222-G (G.2e Draft) Seismic Design Provisions 199
(a) General 199
(b) Load Combinations 199
(c) Frequency Determination 200
5.5.5.2 NEHRP Guidelines - TS13 201
5.5.5.3 Safety Related Nuclear Structures 202
5.5.5.4 Canadian Standard CSA S37-01 203
(a) Life Safety 203
(b) Interrupted Serviceability 203
(c) Continuous Serviceability 203

5.5.5.5 Australian Standard AS 3995-1994 204
5.5.5.6 Eurocode 8 - Part 3: European Prestandard ENV 1998-3 (CEN 1998) 205
5.5.5.7 Recommendations of IASS Working Group 4 (1981) 206
5.6 Foundations 206
5.6.1 General 206
5.6.2 Settlement 208
5.6.3 Liquefaction 208
5.6.4 Sliding 209
5.6.5 Soil-Structure Interaction 209
5.7 Notation 210
5.8 References 212
5.9 Bibliography 215
Appendix-A: Example - Self-supporting Tower 215

6. VIBRATION CONTROL 222

6.1 General 222
6.2 Sources of Damping 222
6.2.1 Structural Damping 222
6.2.2 Environmental Damping-Aerodynamic Damping 223
6.2.3 Soil Damping 224
6.2.4 Supplemental Damping 224
6.3 Damping Devices 224
6.4 Review of Structure Passive Control Devices 225
6.4.1 Displacement-Dependent Devices 226
6.4.1.1 Friction Devices 226
6.4.1.2 Yielding Steel Devices 228
6.4.2 Velocity-Dependent Devices 231
6.4.2.1 Solid Viscoelastic Devices 231
6.4.2.2 Fluid Viscoelastic Devices (FVED) 234
6.4.2.3 Fluid Viscous Devices (FVD) 234
6.4.3 Other Type of Devices 236
6.4.3.1 Hanging Chain Dampers (HCD) 236
(a) Analysis and Design 237
(b) Case History 238
6.4.3.2 Tuned Mass Dampers (TMD) 238
6.4.3.3 Tuned Liquid Dampers-
Tuned Liquid Column Dampers 241
(a) Tuned Liquid Column Dampers (TLCD) 241
(b) Governing Equation for a SDOF Tower with a TLCD 242
6.5 Guy Vibrations 243
6.5.1 Dampers to Control Galloping Excitations 244
6.5.1.1 The Sandamper 244

6.5.1.2 Snubber Damper System 245
6.5.1.3 Chain Damper 246
6.5.2 Dampers to Control Vortex Excitations 246
6.5.2.1 Hydraulic Dashpot 247
6.5.2.2 The Stockbridge Damper 247
6.5.2.3 Rope Loops 247
6.5.3 Examples of Guy Galloping and Remedial Measures 248
6.5.4 Fatigue 250
6.6 Analysis of Towers with Energy Dissipation Devices 251
6.7 Design Considerations for Supplemental Damping Applications 253
6.8 Notation 253
6.9 References 255
6.10 Bibliography 257
