

FUEL CELL ENGINES

MATTHEW M. MENCH

Contents

Preface vii

Acknowledgments xi

1 Introduction to Fuel Cells 1

1.1	Preliminary Remarks	1
1.2	Fuel Cells as Electrochemical Engines	3
1.3	Generic Fuel Cell and Stack	6
1.4	Classification of Fuel Cells	9
1.5	Potential Fuel Cell Applications and Markets	17
1.6	History of Fuel Cell Development	23
1.7	Summary	24
	Application Study	24
	Problems	25
	References	26

2 Basic Electrochemical Principles 29

2.1	Electrochemical versus Chemical Reactions	29
2.2	Electrochemical Reaction	31
2.3	Scientific Units, Constants, and Basic Laws	35
2.4	Faraday's Laws: Consumption and Production of Species	43
2.5	Measures of Reactant Utilization Efficiency	48
2.6	The Generic Fuel Cell	50
2.7	Summary	56
	Application Study	58
	Problems	58
	References	61

3 Thermodynamics of Fuel Cell Systems 62

3.1	Physical Nature of Thermodynamic Variables	62
3.2	Heat of Formation, Sensible Enthalpy, and Latent Heat	74

3.3	Determination of Change in Enthalpy for Nonreacting Species and Mixtures	78
3.4	Determination of Change in Enthalpy for Reacting Species and Mixtures	83
3.5	Psychrometrics: Thermodynamics of Moist Air Mixtures	91
3.6	Thermodynamic Efficiency of a Fuel Cell	96
3.7	Maximum Expected Open-Circuit Voltage: Nernst Voltage	106
3.8	Summary	114
	Application Study	116
	Problems	116
	References	119

4 Performance Characterization of Fuel Cell Systems 121

4.1	Polarization Curve	121
4.2	Region I: Activation Polarization	126
4.3	Region II: Ohmic Polarization	157
4.4	Region III: Concentration Polarization	168
4.5	Region IV: Other Polarization Losses	175
4.6	Polarization Curve Model Summary	181
4.7	Summary	183
	Application Study	185
	Problems	186
	References	189

5 Transport in Fuel Cell Systems 191

5.1	Ion Transport in an Electrolyte	191
5.2	Electron Transport	209
5.3	Gas-Phase Mass Transport	210
5.4	Single-Phase Flow in Channels	233
5.5	Multiphase Mass Transport in Channels and Porous Media	239
5.6	Heat Generation and Transport	263
5.7	Summary	276
	Application Study	278
	Problems	279
	References	281

6	Polymer Electrolyte Fuel Cells	285
6.1	Hydrogen PEFC	285
6.2	Water Balance in PEFC	298
6.3	PEFC Flow Field Configurations and Stack Design	325
6.4	Direct Alcohol Polymer Electrolyte Cells	339
6.5	PEFC Degradation	356
6.6	Multidimensional Effects	362
6.7	Summary	369
	Application Study	371
	Problems	371
	References	374

7	Other Fuel Cells	380
7.1	Solid Oxide Fuel Cells	381
7.2	Molten Carbonate Fuel Cells	392
7.3	Phosphoric Acid Fuel Cells	398
7.4	Alkaline Fuel Cells	410
7.5	Biological and Other Fuel Cells	418
7.6	Summary	418
	Application Study	419
	Problems	420
	References	421

8	Hydrogen Storage, Generation, and Delivery	426
8.1	Modes of Storage	426
8.2	Modes of Generation	438
8.3	Hydrogen Delivery	443
8.4	Overall Hydrogen Infrastructure Development	446
8.5	Summary	448
	Application Study	449
	Problems	449
	References	450

9	Experimental Diagnostics and Diagnosis	453
9.1	Electrochemical Methods to Understand Polarization Curve Losses	454
9.2	Physical Probes and Visualization	469
9.3	Degradation Measurements	478
9.4	Summary	478
	Application Study	479
	Problems	480
	References	481
	Appendix	485
