Machine Vision Algorithms and Applications

Contents

Preface IX

1	Introduction	1
2	Image Acquisition	5
2.1	Illumination	5
2.1.1	Electromagnetic Radiation	5
2.1.2	Types of Light Sources	7
2.1.3	Interaction of Light and Matter	8
2.1.4	Using the Spectral Composition of the Illumination	10
2.1.5	Using the Directional Properties of the Illumination	12
2.2	Lenses	17
2.2.1	Pinhole Cameras	18
2.2.2	Gaussian Optics	18
2.2.3	Depth of Field	24
2.2.4	Telecentric Lenses	27
2.2.5	Lens Aberrations	30
2.3	Cameras	35
2.3.1	CCD Sensors	36
2.3.2	CMOS Sensors	40
2.3.3	Color Cameras	42
2.3.4	Sensor Sizes	45
2.3.5	Camera Performance	45
2.4	Camera–Computer Interfaces	49
2.4.1	Analog Video Signals	49
2.4.2	Digital Video Signals: Camera Link	54
2.4.3	Digital Video Signals: IEEE 1394	55
2.4.4	Digital Video Signals: USB 2.0	57
2.4.5	Digital Video Signals: Gigabit Ethernet	58
2.4.6	Image Acquisition Modes	61

3	Machine Vision Algorithms	65
3.1	Fundamental Data Structures	65
3.1.1	Images	65
3.1.2	Regions	66
3.1.3	Subpixel-Precise Contours	69
3.2	Image Enhancement	70
3.2.1	Gray Value Transformations	70
3.2.2	Radiometric Calibration	73
3.2.3	Image Smoothing	78
3.2.4	Fourier Transform	89
3.3	Geometric Transformations	94
3.3.1	Affine Transformations	94
3.3.2	Projective Transformations	95
3.3.3	Image Transformations	96
3.3.4	Polar Transformations	100
3.4	Image Segmentation	102
3.4.1	Thresholding	102
3.4.2	Extraction of Connected Components	111
3.4.3	Subpixel-Precise Thresholding	113
3.5	Feature Extraction	115
3.5.1	Region Features	116
3.5.2	Gray Value Features	120
3.5.3	Contour Features	124
3.6	Morphology	125
3.6.1	Region Morphology	125
3.6.2	Gray Value Morphology	140
3.7	Edge Extraction	144
3.7.1	Definition of Edges in 1D and 2D	145
3.7.2	1D Edge Extraction	149
3.7.3	2D Edge Extraction	155
3.7.4	Accuracy of Edges	162
3.8	Segmentation and Fitting of Geometric Primitives	169
3.8.1	Fitting Lines	170
3.8.2	Fitting Circles	174
3.8.3	Fitting Ellipses	175
3.8.4	Segmentation of Contours into Lines, Circles, and Ellipses	177
3.9	Camera Calibration	180
3.9.1	Camera Models for Area Scan Cameras	181
3.9.2	Camera Model for Line Scan Cameras	185
3.9.3	Calibration Process	188
3.9.4	World Coordinates from Single Images	193
3.9.5	Accuracy of the Camera Parameters	196

3.10	Stereo Reconstruction	198
3.10.1	Stereo Geometry	199
3.10.2	Stereo Matching	207
3.11	Template Matching	211
3.11.1	Gray-Value-Based Template Matching	212
3.11.2	Matching Using Image Pyramids	217
3.11.3	Subpixel-Accurate Gray-Value-Based Matching	221
3.11.4	Template Matching with Rotations and Scalings	222
3.11.5	Robust Template Matching	222
3.12	Optical Character Recognition	241
3.12.1	Character Segmentation	241
3.12.2	Feature Extraction	243
3.12.3	Classification	246

4 Machine Vision Applications 263

4.1	Wafer Dicing	263
4.2	Reading of Serial Numbers	269
4.3	Inspection of Saw Blades	276
4.4	Print Inspection	281
4.5	Inspection of Ball Grid Arrays (BGA)	285
4.6	Surface Inspection	293
4.7	Measuring of Spark Plugs	301
4.8	Molding Flash Detection	307
4.9	Inspection of Punched Sheets	316
4.10	3D Plane Reconstruction with Stereo	320
4.11	Pose Verification of Resistors	328
4.12	Classification of Non-Woven Fabrics	334
