

Molecular Electronics, Circuits, and Processing Platforms

SERGEY EDWARD LYSHEVSKI

 **CRC Press**
Taylor & Francis Group

Contents

Preface	ix
Acknowledgments	xi
Author	xiii
1 Electronics and Emerging Paradigms	1
1.1 Introduction	1
1.2 Historical Overview: From Atoms to Theory of Microscopic Systems and Fabrication	2
1.3 Devices, Circuits, and Processing Platforms	6
1.4 Electronics and Processing Platforms: Retrospect and Prospect	9
1.5 Molecular Processing Platforms: Evidence of Feasibility, Soundness, and Practicality Substantiation	12
1.6 Microelectronics and Emerging Paradigms: Challenges, Implications, and Solutions	17
References	26
2 Molecular Electronics: Device-Level and System-Level Considerations	29
2.1 Performance Estimates	29
2.1.1 Entropy and Its Application	31
2.1.2 Distribution Statistics	33
2.1.3 Energy Levels	34
2.1.4 Device Transition Speed	40
2.1.5 Photon Absorption and Transition Energetics	41
2.1.6 System-Level Performance Estimates	42
2.2 Topologies, Organizations, and Architectures	44
2.3 Synthesis Taxonomy in Design of Molecular Integrated Circuits and Processing Platforms	46
References	50
3 Biomolecular Processing and Molecular Electronics	51
3.1 Neuroscience: Conventional Outlook and Brainstorming Rational	51

3.2	Processing in Neurons	57
3.2.1	Introduction and Discussions.....	57
3.2.2	Processing and Networking in Neurons: Proposed Outlook.....	60
3.3	Biomolecules and Ions Transport: Communication Energetics and Energy Estimates	64
3.3.1	Active and Passive Transport: Brownian Dynamics.....	64
3.3.2	Ionic Transport	69
3.4	Applied Information Theory and Information Estimates.....	72
3.5	Biomimetics and Bioprototyping	84
3.6	Fluidic Molecular Platforms.....	87
3.7	Neuromorphological Reconfigurable Molecular Processing Platforms and Cognitive Processing	89
3.8	Reconfigurable 3D Networking-and-Processing and Reconfigurable Vector Neural Networks.....	93
3.9	Biomolecules and Bioinformatics.....	98
3.9.1	DNA and Proteins: Introduction	98
3.9.2	Overview of Bioinformatics Methods	109
3.9.3	Genome Analysis in the Frequency Domain	113
3.9.4	DNA- and Protein-Centered Electronics: Feasibility Assessment	123
	References	129
4	Design of Molecular Integrated Circuits.....	133
4.1	Molecular Electronics and Gates: Device and Circuits Prospective	133
4.2	Decision Diagrams and Logic Design of Molecular Integrated Circuits	139
4.3	Hypercube Design	145
4.4	Molecular Signal/Data Processing and Memory Platforms.....	150
4.5	Finite-State Machines and Their Use in Hardware and Software Design	159
4.6	Adaptive Defect-Tolerant Molecular Processing Platforms	163
4.6.1	Programmable Gate Arrays	163
4.6.2	Reconfigurable Molecular Integrated Circuits and Design Rules.....	165
4.6.3	Design of Reconfigurable Molecular Processing Platforms.....	173
4.7	Hardware-Software Design	176
	References	180
5	Synthesis of Molecular Electronic Devices: Towards Molecular Integrated Circuits	181
5.1	Synthesis of Molecular Electronic Devices	181
5.2	Testing and Characterization of Proof-of-Concept Molecular Electronic Devices	190

5.3	Molecular Integrated Circuits and Design Rules.....	193
	References	195
6	Modeling and Analysis of Molecular Electronic Devices	197
6.1	Atomic Structures and Quantum Mechanics	197
6.2	Introduction to Modeling and Analysis	204
6.3	Heisenberg Uncertainty Principle	207
6.4	Particle Velocity	210
6.5	Schrödinger Equation	213
	6.5.1 Introduction and Fundamentals.....	213
	6.5.2 Application of the Schrödinger Equation: One-Dimensional Potentials	219
6.6	Quantum Mechanics and Molecular Electronic Devices: Three-Dimensional Problem	244
6.7	Electromagnetic Field and Control of Particles in Molecular Electronic Devices	252
	6.7.1 Microscopic Particle in an Electromagnetic Field	252
	6.7.2 Dynamics and Control of Particles in Molecular Electronic Devices	255
6.8	Green Function Formalism	260
6.9	Case Study: Multiterminal Quantum Effect Molecular Electronic Device.....	266
	References	272
	Index	275
