Preface to the Second Edition

vii

1	Complex Numbers	1
1.1	Definition of Complex Numbers	1
1.2	Geometric Interpretation	5
1.3	Square roots	12
1.4	Rational Powers of a Complex Number	13
1.5	Topology of the Complex Plane	17
1.6	Sequences and Series	23
1.7	Exercises	30
2	Functions, Limit and Continuity	33
2.1	One-to-one and Onto Functions	33
2.2	Concepts of Limit and Continuity	37
2.3	Stereographic Projection	45
2.4	Sequences and Series of Functions	55
2.5	Exercises	60
3	Analytic Functions and Power Series	63
3.1	Differentiability and Cauchy-Riemann Equations	63
3.2	Harmonic Functions	76
3.3	Power Series as an Analytic Function	86
3.4	Exponential and Trigonometric Functions	95
3.5	Logarithmic Functions	101
3.6	Inverse Functions	110
3.7	Exercises	111
4	Complex Integration	117
4.1	Curves in the Complex Plane	117
4.2	Properties of Complex Line Integrals	121
4.3	Cauchy-Goursat Theorem	134
4.4	Consequence of Simply Connectivity	142
4.5	Winding Number or Index of a Curve	143
4.6	Homotopy Version of Cauchy's Theorem	146
4.7	Cauchy Integral Formula	151
4.8	Morera's Theorem	162
4.9	Existence of Harmonic Conjugate	164
4.10	Taylor's Theorem	166

4.11	Zeros of Analytic Functions	170
4.12	Laurent Series	177
4.13	Exercises	186
5	Conformal Mappings and Möbius Transformations	191
5.1	Principle of Conformal Mapping	191
5.2	Basic Properties of Möbius Maps	200
5.3	Fixed Points and Möbius Maps	206
5.4	Triples to Triples under Möbius Maps	209
5.5	The Cross-Ratio and its Invariance Property	211
5.6	Conformal Self-maps of Disks and Half-planes	213
5.7	Principle of Symmetry and Möbius Maps	223
5.8	Exercises	227
6	Maximum Principle, Schwarz' Lemma, and Liouville's Theorem	231
6.1	Maximum Modulus Principle	231
6.2	Hadamard's Three Circles/Lines Theorems	236
6.3	Schwarz' Lemma and its Consequences	239
6.4	Liouville's Theorem	249
6.5	Doubly Periodic Entire Functions	255
6.6	Fundamental Theorem of Algebra	256
6.7	Zeros of certain Polynomials	258
6.8	Exercises	260
7	Classification of Singularities	263
7.1	Isolated and Non-isolated Singularities	263
7.2	Removable Singularities	266
7.3	Poles	269
7.4	Further Illustrations through Laurent's Series	271
7.5	Isolated Singularities at Infinity	274
7.6	Meromorphic Functions	277
7.7	Essential Singularities and Picard's Theorem	279
7.8	Exercises	284
8	Calculus of Residues	287
8.1	Residue at a Finite Point	287
8.2	Residue at the Point at Infinity	297
8.3	Residue Theorem	299
8.4	Number of Zeros and Poles	303
8.5	Rouché's Theorem	308
8.6	Exercises	311
9	Evaluation of certain Integrals	315
9.1	Integrals of Type $\int_{\alpha}^{2\pi+\alpha} R(\cos \theta, \sin \theta) d\theta$	315
9.2	Integrals of Type $\int_{-\infty}^{\infty} f(x) dx$	320
9.3	Integrals of Type $\int_{-\infty}^{\infty} g(x) \cos mx dx$	329
9.4	Singularities on the Real Axis	331
9.5	Integrals Involving Branch Points	337

9.6	Estimation of Sums	340
9.7	Exercises	345
10	Analytic Continuation	347
10.1	Direct Analytic Continuation	347
10.2	Monodromy Theorem	355
10.3	Poisson Integral Formula	360
10.4	Analytic Continuation via Reflection	368
10.5	Exercises	371
11	Representations for Meromorphic and Entire Functions	373
11.1	Infinite Sums and Meromorphic Functions	374
11.2	Infinite Product of Complex Numbers	380
11.3	Infinite Products of Analytic Functions	386
11.4	Factorization of Entire Functions	390
11.5	The Gamma Function	400
11.6	The Zeta Function	403
11.7	Jensen's Formula	409
11.8	The Order and the Genus of Entire Functions	415
11.9	Exercises	425
12	Mapping Theorems	429
12.1	Open Mapping Theorem and Hurwitz' Theorem	429
12.2	Basic Results on Univalent Functions	432
12.3	Normal Families	436
12.4	The Riemann Mapping Theorem	441
12.5	Bieberbach Conjecture	449
12.6	The Bloch-Landau Theorems	452
12.7	Picard's Theorem	458
12.8	Exercises	462
	Bibliography	465
	Index of Special Notations	467
	Hints and Solutions for Selected Exercises	471
	Index	503
