

WILLIAM F. RUDDIMAN

EARTH'S CLIMATE

PAST and FUTURE

SECOND EDITION

CONTENTS

Preface	xv		
PART I Framework of Climate Science	1		
CHAPTER 1 Overview of Climate Science	3		
Climate and Climate Change	4		
1-1 Geologic Time	4		
Tools of Climate Science Temperature Scales	5		
1-2 How This Book Is Organized	6		
Development of Climate Science	7		
1-3 How Scientists Study Climate Change	8		
Overview of the Climate System	8		
1-4 Components of the Climate System	8		
1-5 Climate Forcing	10		
1-6 Climate System Responses	10		
1-7 Time Scales of Forcing Versus Response	12		
1-8 Differing Response Rates and Climate-System Interactions	14		
1-9 Feedbacks in the Climate System	15		
Climate Interactions and Feedbacks Positive and Negative Feedbacks	16		
CHAPTER 2 Climate Archives, Data, and Models	17		
Climate Archives, Dating, and Resolution	18		
2-1 Types of Archives	18		
2-2 Dating Climate Records	21		
2-3 Climatic Resolution	25		
Climatic Data	26		
2-4 Biotic Data	27		
2-5 Geological and Geochemical Data	29		
Climate Models	31		
2-6 Physical Climate Models	31		
2-7 Geochemical Models	36		
PART II Tectonic-Scale Climate Change	40		
CHAPTER 3 CO ₂ and Long-Term Climate	43		
Greenhouse Worlds	44		
Faint Young Sun Paradox	45		
Carbon Exchanges Between Rocks and the Atmosphere	46		
		3-1 Volcanic Input of Carbon from Rocks to the Atmosphere	47
		3-2 Removal of CO ₂ from the Atmosphere by Chemical Weathering	48
		Climatic Factors That Control Chemical Weathering	50
		Is Chemical Weathering Earth's Thermostat?	51
		3-3 Greenhouse Role of Water Vapor	53
		Is Life the Ultimate Control on Earth's Thermostat?	53
		3-4 Gaia Hypothesis	53
		Looking Deeper into Climate Science Organic Carbon Subcycle	54
		Was There a "Thermostat Malfunction"? A Snowball Earth?	57
		CHAPTER 4 Plate Tectonics and Long-Term Climate	59
		Plate Tectonics	60
		4-1 Structure and Composition of Tectonic Plates	61
		4-2 Evidence of Past Plate Motions	62
		Polar Position Hypothesis	64
		4-3 Glaciations and Continental Positions Since 500 Myr Ago	64
		Modeling Climate on the Supercontinent Pangaea	67
		4-4 Input to the Model Simulation of Climate on Pangaea	67
		Looking Deeper into Climate Science Brief Glaciation 440 Myr Ago	67
		4-5 Output from the Model Simulation of Climate on Pangaea	69
		Tectonic Control of CO ₂ Input: BLAG Spreading-Rate Hypothesis	71
		4-6 Control of CO ₂ Input by Seafloor Spreading	71
		4-7 Initial Evaluation of the BLAG Spreading Rate Hypothesis	75
		Tectonic Control of CO ₂ Removal: Uplift- Weathering Hypothesis	75
		4-8 Rock Exposure and Chemical Weathering	75
		4-9 Case Study: The Wind River Basin of Wyoming	75
		4-10 Uplift and Chemical Weathering	77

4-11	Case Study: Weathering in the Amazon Basin	78	Earth's Orbit Today	120	
4-12	Weathering: Both a Climate Forcing and a Feedback?	79	7-1	Earth's Tilted Axis of Rotation and the Seasons	120
CHAPTER 5 Greenhouse Climate			7-2	Earth's Eccentric Orbit: Distance Between Earth and Sun	120
	What Explains the Warmth 100 Myr Ago?	81		Long-Term Changes in Earth's Orbit	121
5-1	Model Simulations of the Cretaceous Greenhouse	82	7-3	Changes in Earth's Axial Tilt Through Time	121
5-2	What Explains the Data-Model Mismatch?	84	Tools of Climate Science Cycles and Modulation		122
5-3	Relevance of Past Greenhouse Climate to the Future	85	7-4	Changes in Earth's Eccentric Orbit Through Time	123
Sea Level Changes and Climate		86	7-5	Precession of the Solstices and Equinoxes Around Earth's Orbit	124
5-4	Causes of Tectonic-Scale Changes in Sea Level	87	Looking Deeper into Climate Science Earth's Precession as a Sine Wave		127
5-5	Effect of Changes in Sea Level on Climate	91	Changes in Insolation Received on Earth		129
Looking Deeper into Climate Science Calculating Changes in Sea Level		91	7-6	Insolation Changes by Month and Season	129
Asteroid Impact		92	7-7	Insolation Changes by Caloric Seasons	131
Large and Abrupt Greenhouse Episode near 50 Myr Ago		94	Searching for Orbital-Scale Changes in Climatic Records		132
CHAPTER 6 From Greenhouse to Icehouse: The Last 50 Million Years			7-8	Time Series Analysis	133
Global Climate Change Since 50 Myr Ago		98	7-9	Effects of Undersampling Climate Records	134
6-1	Evidence from Ice and Vegetation	98	7-10	Tectonic-Scale Changes in Earth's Orbit	135
6-2	Evidence from Oxygen Isotope Measurements	100	CHAPTER 8 Insolation Control of Monsoons		
6-3	Evidence from Mg/Ca Measurements	101	Monsoon Circulations		138
Do Changes in Geography Explain the Cooling?		102	8-1	Orbital-Scale Control of Summer Monsoons	139
6-4	Gateway Hypothesis	103	Orbital-Scale Changes in North African Summer Monsoons		
6-5	Assessment of Gateway Changes	104	8-2	"Stinky Muds" in the Mediterranean	142
Hypotheses Linked to Changes in CO ₂		105	8-3	Freshwater Diatoms in the Tropical Atlantic	144
6-6	Evaluation of the BLAG Spreading Rate Hypothesis	105	8-4	Upwelling in the Equatorial Atlantic	145
6-7	Evaluation of the Uplift Weathering Hypothesis	106	Orbital Monsoon Hypothesis: Regional Assessment		
Climate Debate Timing of the Uplift in Western North America		108	8-5	Cave Speleothems in China and Brazil	146
Future Climate Change at Tectonic Scales		111	8-6	Phasing of Summer Monsoons	148
Looking Deeper into Climate Science Organic Carbon: Monterrey Hypothesis		112	Looking Deeper into Climate Science Insolation-Driven Monsoon Responses: Chronometer for Tuning		
PART III Orbital-Scale Climate Change			Monsoon Forcing Earlier in Earth's History		149
116			8-7	Monsoons on Pangaea 200 Myr Ago	150
CHAPTER 7 Astronomical Control of Solar Radiation			8-8	Joint Tectonic and Orbital Control of Monsoons	152
119			CHAPTER 9 Insolation Control of Ice Sheets		
119			Milankovitch Theory: Orbital Control of Ice Sheets		156

Modeling the Behavior of Ice Sheets	157	11-3 CO ₂ Feedback at 41,000 Years?	196
9-1 Insolation Control of Ice Sheet Size	158	Mystery of the ~100,000-Year Glacial World	196
9-2 Ice Sheets Lag Behind Summer Insolation Forcing	160	11-4 How Is the Northern Ice Signal Transferred South?	198
9-3 Delayed Bedrock Response Beneath Ice Sheets	161	Why Did the Northern Ice Sheets Vary at ~100,000 Years?	200
Looking Deeper into Climate Science Ice Volume Response to Insolation	161	Looking Deeper into Climate Science Link Between Forcing and the Time Constants of Ice Response	200
9-4 Full Cycle of Ice Growth and Decay	163	11-5 Ice Interactions with Bedrock	201
9-5 Ice Slipping and Calving	164	11-6 Ice Interactions with the Local Environment	203
Northern Hemisphere Ice Sheet History	165	11-7 Ice Interactions with Greenhouse Gases	203
9-6 Ice Sheet History: $\delta^{18}\text{O}$ Evidence	165		
9-7 Confirming Ice Volume Changes: Coral Reefs and Sea Level	167		
Is Milankovich's Theory the Full Answer?	168	PART IV Deglacial Climate Change	206
Looking Deeper into Climate Science Sea Level on Uplifting Islands	170	CHAPTER 12 Last Glacial Maximum	209
CHAPTER 10 Orbital-Scale Changes in Carbon Dioxide and Methane	175	Glacial World: More Ice, Less Gas	210
Ice Cores	176	12-1 Project CLIMAP: Reconstructing the Last Glacial Maximum	210
10-1 Drilling and Dating Ice Cores	176	12-2 How Large Were the Ice Sheets?	213
10-2 Verifying Ice-Core Measurements of Ancient Air	177	12-3 Glacial Dirt and Winds	214
10-3 Orbital-Scale Carbon Transfers: Carbon Isotopes	178	Testing Model Simulations Against Biotic Data	216
Orbital-Scale Changes in CO ₂	179	12-4 COHMAP: Data-Model Comparisons	216
10-4 Where Did the Missing Carbon Go?	179	12-5 Pollen: Indicator of Climate on the Continents	216
10-5 $\delta^{13}\text{C}$ Evidence of Carbon Transfer	180	12-6 Using Pollen for Data-Model Comparisons	218
How Did the Carbon Get into the Deep Ocean?	182	Data-Model Comparisons of Glacial Maximum Climates	219
10-6 Increased CO ₂ Solubility in Seawater	182	12-7 Model Simulations of Glacial Maximum Climates	219
10-7 Biological Transfer from Surface Waters	182	12-8 Climate Changes near the Northern Ice Sheets	220
A Closer Look at Climate Science Using $\delta^{13}\text{C}$ to Measure Carbon Pumping	183	12-9 Climate Changes far from the Northern Ice Sheets	223
10-8 Changes in Deep-Water Circulation	185	How Cold Were the Glacial Tropics?	224
Orbital-Scale Changes in CH ₄	187	12-10 Evidence for a Small Tropical Cooling	225
Orbital-Scale Climatic Roles: CO ₂ and CH ₄	188	12-11 Evidence for a Large Tropical Cooling	226
CHAPTER 11 Orbital-Scale Interactions, Feedbacks, and Unsolved Problems	191	12-12 Actual Cooling Was Medium-Small	226
Climatic Responses Driven by the Ice Sheets	192	CHAPTER 13 Climate During and Since the Last Deglaciation	229
Mystery of the 41,000-Year Glacial World	194	Fire and Ice: Shift in the Balance of Power	230
11-1 Did Insolation Really Vary Mainly at 41,000 Years?	194	13-1 When Did the Ice Sheets Melt?	230
11-2 Interhemispheric Cancellation of 23,000-Year Ice Volume Responses?	194	13-2 Coral Reefs and Rising Sea Level	230
		13-3 Glitches in the Deglaciation: Deglacial Two-Step	232

Tools of Climate Science Deglacial ¹⁴ C Dates Are Too Young	233	15-5 Impacts of Climate on Early Civilizations	281
13-4 Positive Feedbacks to Deglacial Melting	237	Climate Debate Sea Level Rise and Flood Legends	282
13-5 Deglacial Lakes, Floods, and Sea Level Rise	238	Early Impacts of Humans on Climate	283
Other Climate Changes During and After Deglaciation	240	15-6 Did Humans Cause Megafaunal Extinctions?	284
Climate Interactions and Feedbacks Giant Deglacial Floods	240	15-7 Did Early Farmers Alter Climate?	285
13-6 Stronger, Then Weaker Monsoons	241	CHAPTER 16 Climate Changes During the Last 1000 Years	289
13-7 Warmer, Then Cooler North Polar Summers	243	Little Ice Age	290
Current and Future Orbital-Scale Climatic Change	246	Proxy Records of Historical Climate	292
CHAPTER 14 Millennial Oscillations of Climate	251	16-1 Ice Cores from Mountain Glaciers	292
Millennial Oscillations During Glaciations	252	16-2 Tree Rings	295
14-1 Oscillations Recorded in Greenland Ice Cores	252	Tools of Climate Science Analyzing Tree Rings	296
14-2 Oscillations Recorded in North Atlantic Sediments	253	16-3 Corals and Tropical Ocean Temperatures	298
14-3 Detecting and Dating Oscillations in Other Regions	255	16-4 Other Historical Observations	299
14-4 Oscillations Elsewhere in the Northern Hemisphere	256	Climate Interactions and Feedbacks El Niño and ENSO	300
14-5 Oscillations in Antarctica	258	Reconstructing Hemispheric Temperature Trends	302
Millennial Oscillations During the Present Interglaciation	259	Proposed Causes of Climate Change from 1000 to 1850	303
Causes of Millennial Oscillations	261	16-5 Orbital Forcing	303
14-6 Solar Variability	263	16-6 Millennial Bipolar Seesaw	303
14-7 Natural Instabilities in Ice Sheets	265	16-7 Solar Variability	303
14-8 Greenhouse-Gas Forcing	266	16-8 Volcanic Explosions	305
14-9 Other Natural Interactions in the Climate System	266	16-9 Greenhouse-Gas Effects on Climate	306
14-10 Implications for Future Climate	268	CHAPTER 17 Climate Changes Since 1850	309
PART V Historical and Future Climate Change	270	Reconstructing Changes in Sea Level	310
CHAPTER 15 Humans and Preindustrial Climate	273	17-1 Fading Memories of Melted Ice Sheets	310
Climate and Human Evolution	274	Other Instrumental Records	314
15-1 Evidence of Human Evolution	274	17-2 Surface Temperatures	314
15-2 Did Climate Change Drive Human Evolution?	276	17-3 Subsurface Ocean Temperatures	315
15-3 Testing Climatic Hypotheses with Fragmentary Records	279	17-4 Mountain Glaciers	315
Impact of Climate on Early Farming	280	17-5 Ground Temperature	316
15-4 Did Deglacial Warming Lead to Early Agriculture?	280	Satellite Observations	317
		17-6 Circum-Arctic Warming	318
		17-7 Ice Sheets	319
		Sources of the Recent Rise in Sea Level	320
		Shorter-Term Oscillations	321
		CHAPTER 18 Causes of Warming over the Last 125 Years	325
		Natural Causes of Recent Warming	326

18-1	Tectonic, Orbital, and Millennial Factors	326	CHAPTER 19	Future Climatic Change	343
18-2	Century- and Decadal-Scale Factors: Solar Forcing	326		Future Human Impacts on Greenhouse Gases	344
18-3	Annual-Scale Forcing: El Niños and Volcanic Eruptions	327	19-1	Factors Affecting Future Carbon Emissions	344
Anthropogenic Causes of the Recent Warming		327	19-2	Projected Carbon Emissions and CO ₂ Concentrations	345
18-4	Carbon Dioxide (CO ₂)	328	19-3	Other Human Effects on the Atmosphere	347
18-5	Methane (CH ₄)	330	Climate Interactions and Feedbacks Will Frozen Methane Melt?		347
18-6	Increases in Chlorofluorocarbons	331	Future Climate Changes Caused by increased CO ₂		348
18-7	Sulfate Aerosols	332	19-4	A World in Climatic Disequilibrium	348
18-8	Brown Clouds	334	19-5	Partial Future Analogs: 2 × and 4 × Preindustrial CO ₂ Concentrations	349
18-9	Land Clearance	335	19-6	Greenhouse Surprises?	353
Earth's Sensitivity to Greenhouse Gases		335	19-7	How Will Greenhouse Warming Change Human Life?	354
18-10	Sensitivity in Climate Models	335	Climate Modification?		356
Climate Interactions and Feedbacks	Radiative Forcing of Recent Warming	336	Epilogue		357
18-11	Sensitivity to Greenhouse Gases: Earth's Climate History	338	Appendix 1	Isotopes of Oxygen	359
Why Has the Warming Since 1850 Been So Small?		339	Appendix 2	Isotopes of Carbon	363
18-12	Delayed Warming: Ocean Thermal Inertia	340	Glossary		365
18-13	Cooling from Anthropogenic Aerosols	340	Index		373
Global Warming: Summary		341
